I was curious to know how with such a remarkable physiognomy she was not recognised in a moment wherever she went, and I put the question to her as delicately as I could. I at once found that I had touched her hobby. If there was one thing that she prided herself upon more than another it was her power of disguising herself; and indeed I afterwards learned from one of the inspectors that she had good reason for being proud of this accomplishment, for there was no one in the force who could compete with her in the cleverness and variety of her disguises. Twice, however, she admitted that her disguise had been penetrated, and on each occasion she nearly paid the penalty with her life. On the first occasion, she was pitched out of the window, and had her leg broken. On the second—which happened not more than a year before my first introduction to her in her professional capacity—she had what she herself called 'a precious narrow shave o' bein' sent to kingdom-come outright.' She had been for weeks on the trail of a very clever gang of thieves, and had actually been admitted a member of the fraternity and wormed herself into their secrets, so perfect and artistic was her disguise. On a certain evening it was agreed that the police were to swoop down upon the gang, acting on 'information received' from 'Clubnose.' On this evening it unfortunately happened that there was present for the first time an old member of the gang who had just got his ticket-of-leave. Whether 'Clubnose,' through over-confidence in the perfection of her disguise, committed some indiscretion or not, she could not tell; but at any-rate in some way the suspicions of the returned convict were roused. He communicated them privately to some of his 'pals'—a rush was made at 'Clubnose'; she was overpowered, stripped of her disguise, and then 'welted,' to use her own expression, about the head and body with pokers, bars, legs of chairs, and any other available weapon, until she was left 'a mass o' jelly.' She contrived, however, before they knocked her senseless, to break the window and sound the whistle she carried. The police burst in, too late to save her from the vengeance of the thieves, but in time to make an important capture. They found 'Clubnose' with her skull fractured, and with hardly a whole bone in her skin. The injuries to her skull were so severe as to necessitate the operation of trepanning, which was successfully performed; but, she said, she had never been herself since, and was constantly troubled with terrible pains in the head.

'Ay,' she added with the rude kind of philosophy which was a curious trait in her character, 'that was a gallus bad job, that was. They nigh done for me; but it might ha' been worse. Supposin' now they'd ha' smashed me up afore I spotted their little game, eh? That would ha' been somethin' to grumble at.'

It was a worse 'job' for poor 'Clubnose' than she imagined. Within six months after my last interview with her, she was dead; the cause of death being an abscess in the brain, produced by

the frightful injuries to her head on the occasion when 'they nigh done' for her. She must have been missed in the force; for she was—as the judge described her at the trial which first brought her remarkable qualities into prominence—'a born detective;' and it will be long before the police of this or any other country obtain the services of a woman possessed of the nerve, the astuteness, and the dogged resolution of 'Clubnose.'

SILVER IN SCOTLAND.

THE story of the 'Golden Age' in Scotland, some of the scanty particulars of which we gave in a former number of this *Journal*, may be supplemented by a few facts with reference to the less precious metal, silver. Mr Cochrane-Patrick, from whose work on the *Early Records of Mining in Scotland* we previously quoted, has only a brief paragraph of the earlier history of silver in that country. It is even considered likely that lead was wrought in Scotland in the days of Roman rule. From the thirteenth century downwards, the story of lead-mining appears to be continuous; and it is not improbable that the extraction of the silver almost invariably found with the lead ores, has been practised from even an earlier date. The recognition of the silver used in Scotland as native may be illustrated by the fact that James IV., when at the church of St Ninian at Whithorn, offered a relic made of the king's own silver. In the Lord Treasurer's accounts of the same period, recently published, there is evidence of the possession of large quantities of vessels and ornaments in silver; and in one entry we read of broken silver vessels to the weight of over fifty pounds troy being sent to be coined. In 1562, the 'maister cunyeor,' or Master of the Mint, John Acheson, and an Edinburgh burgess named Aslowan, obtained power from the Privy Council to work and export to Flanders or other parts beyond sea, twenty thousand stone-weight of lead; and they were bound, in return for the privilege, to send into the mint forty-five ounces of 'uter fyne silvir' for every thousand stone-weight of lead exported. This obligation, as the licence goes on to shew, meant the payment of nine hundred ounces of pure silver; and this was to be delivered between January and August of that year. Three years later, Mr Stewart of Tarlair and his son got power to labour all and sundry mines of every kind of metal between the water of Tay and the sheriffdom of Orkney. This grant is of interest, because it mentions the price paid for silver brought to the mint three centuries ago—namely twenty-three shillings the ounce. In the same year, Acheson and Aslowan satisfied the Lord Treasurer for the nine hundred ounces of silver by paying £1176, 9s. 10d. This is above twenty-six shillings the ounce, and indicates a tolerably heavy seignorage, if the difference in price may be so understood. Grants similar to those given to Acheson and Aslowan followed, the Earl of Athole obtaining one in which the lordship for the export of lead is given at fifty ounces of silver to the thousand stone-weight of lead.

A very curious story, from Atkinson's *Discoverie and Historie of the Golde Mines of Scotland*, relates

how silver was accidentally discovered in Linlithgowshire by Sandy Maund, a Scotch collier. This was on the property of Sir Thomas Hamilton of Binnie, who got a charter under the Great Seal in 1607, to work all the mines and minerals on his property. But the silver mine was shortly afterwards taken possession of in name of the king; and the public accounts connected with the working of the silver remain to this day in the General Register House at Edinburgh, in the shape of three large folio volumes, extending from May 1608 to December 1610. Sir Bevis Bulmer, governor of the work, received eight pounds Scots a day as 'wages' (equivalent to 13s. 4d. sterling); and the accounts are perhaps more interesting as giving evidence of the rate of pay drawn by various kinds of workmen, than from the fact of silver being wrought in the district. Pickmen, working in day and night shifts, received various rates, from thirteen shillings and fourpence to six shillings and eightpence Scots, a day; the former rate being paid to one man, presumably a foreman, as none of the others received more than ten shillings a day. The whole cost of the mine for a year is shewn to have been £20,848, 8s. 9d. These mines did not fulfil the great expectations formed of them; and in 1613, Foulis the Edinburgh goldsmith and two partners—one of them a Portuguese—got a grant of the right of mining, on condition of paying the tenth part of the result to the crown, but with the reservation of the right to buy back the mines on payment of one hundred thousand pounds Scots.

For nearly a century the story of silver-mining in Scotland remains a blank; but about Queen Anne's time a great discovery of silver was made in the Ochil Hills, on the property of Sir John Erskine of Alva. The ore was so rich at first, that fourteen ounces of ore produced twelve ounces of silver, and for a time the mines yielded a profit of four thousand pounds a week. This was, however, too good to last long. In Sir John Sinclair's *Statistical Account of Scotland*, it is narrated that Sir John Erskine, walking over his estate with a friend, said: 'Out of that hole I took fifty thousand pounds;' and presently coming to another excavation, he added: 'But I put it all into that hole.' Two communion cups, presented to the parish church of Alva by Lord Alva in 1767, are inscribed as made *ex argento indigena* (from native silver); and although silver is still found to a small extent in the working of lead, this is the last important record of the working of silver in Scotland. At the annual show of the Highland and Agricultural Society held at Perth in July of this year, a notable 'exhibit' by a firm of Edinburgh silversmiths was a plateau and vase made from silver obtained from the Duke of Buccleuch's mines at Wanlockhead. On the plateau were chased scenes from *Marmion* and *The Lay of the Last Minstrel*, while the vase bore representations of the Battle of Bannockburn and the Coronation of Robert Bruce. Thus, not to speak of the massive silver chains, &c. of undoubted Scottish origin and of unknown age, in the Museum of Antiquities at Edinburgh, we have a record of silver in Scotland more or less complete for a period of about seven centuries.

RAILWAY PILFERINGS.

IN a previous article ('Railway Claimants') we drew attention to one heavy item of expense in the half-yearly balance-sheets of all large railway Companies—to that, namely, which is incurred for the settlement of merchandise claims; and endeavoured to shew how liable the Companies were to be imposed upon by such claims being in many cases grossly exaggerated and little better than barefaced attempts at swindling. We now propose to deal with the same item of expense from another point of view, and shew that a liberal percentage of the amount so paid may be set down as a consequence of the numerous losses and pilferages of goods by the railway Companies' own servants.

It may be taken as granted, we think, that nearly one-half of the employés of a railway Company are more or less directly engaged in the handling of goods-traffic, either in the loading or unloading of it, in its collection and delivery at the different depôts, or with the charge of it while in transit from one point of the line to another. For their own sakes and for the protection of their customers' property while in their custody, the Companies are naturally anxious that the men whom they engage to fill such subordinate positions as porters, carmen, and shunters should be possessed of antecedents that will bear the brunt of careful investigation. Yet notwithstanding every precaution, black-sheep will occasionally creep into the fold; while others originally honest and reputable, but weak-minded, are led astray in time by drink or evil companionship, till they end by becoming the tools or accomplices of rogues less scrupulous than themselves.

It may surprise an outsider to be told that a number of private constables and detectives are constantly employed by railway Companies to look after their property and that of their customers; yet despite all this care and vigilance, the amount paid for claims by the Companies in the course of a year, arising from pilferages or carelessness on the part of their own servants, is something more surprising still.

Owing to an unexpected flush of traffic, a Company will sometimes be called upon to engage a considerable number of extra hands without having previously had time to inquire into their characters and antecedents. This being well known to the gangs of loafers who infest all large centres of industry, and who when not temporarily employed at one terminus are on the look-out for a job at another, it can hardly be wondered at that the number of pilferages increases in something like a corresponding ratio. In many cases the thieves are never discovered, and many are the ingenious ruses made use of by them to escape detection; while equally clever are some of the modes adopted to bring the culprits within the grasp of the law.

Among the minor class of pilferages, one of the most frequent and most annoying is the robbery of cheese. After every fair, the produce of the different dairies—ranging say from fifty to five hundred cheeses—is distributed by rail to various parts of the country; but on reaching their destination it is frequently found that two or three of the cheeses have mysteriously disappeared in transit; and very rarely is any clue found which leads to the discovery of the thieves. So numerous some few years ago had the cheese robberies become on a certain line, that the expedient was at length adopted of sending a constable in one of the trucks, who lying there hidden, might naturally hope to catch the culprits in the act of purloining. The man slipped in under the sheet of the wagon at the last moment, taking with him his truncheon, a dark-lantern, and a pair of handcuffs, and was well provisioned for his long and uncomfortable journey. Three times a week for some two or three months was Mr Constable jolted about in his dark hiding-place from one part of the line to another without a single capture rewarding his labours.

The following instance of what might almost be termed retributive justice happened some years ago near one of the largest railway depôts in the heart of England. One or another of the wagons travelling by a certain night-train had several

times been broken into and robbed of its miscellaneous contents. The train was a through one, running between London and several large towns in the north of England; but the exigencies of the traffic necessitated its being shunted on to the sidings for an hour or more at two or three different parts of the line; and though it was nearly certain that the robberies took place at one or another of these compulsory stopping-places *en route*, it was not easy to discover the precise spot. A watch was set, but to no purpose. The *modus operandi* of the thief was to cut a slit in one of the sheets, large enough for a man to creep through. Once inside, the contents of the truck were ransacked, and such articles selected as were likely to be of some value and yet not too bulky to be carried away. The articles were then pitched out, and the man followed, after readjusting the sheet as far as he was able. The presumption was that the stolen property was then rolled down the embankment and hidden away in some dry ditch or hedge-bottom till it could be safely 'lifted.' It has been found from experience that a large proportion of railway robberies, despite the watchfulness of guard and driver, are committed at lonely sidings during the long dark nights of winter, and so no doubt it was in the present case; the difficulty being to find out when and where; but it was a difficulty that solved itself in a very curious way. One morning at daybreak the dead body of a man, with his chest crushed in, was picked up on one of the sidings; near him were strewn some half-dozen packages or parcels of goods addressed to different consignees. There could be no doubt that he was the thief. It was supposed that after throwing the goods out of the truck he had been about to follow them, when the engine giving a sudden jerk at the train, caused him to overbalance himself, and that in falling he was caught between the buffers and crushed to death on the spot. He proved to be a workman employed at one of the Company's 'shops,' and had been noted as a quiet, steady-going man, who never seemed to have much to say to his neighbours. When his house came to be searched, stolen property of the value of more than a hundred pounds was found secreted in it.

A short time ago, a series of robberies took place from certain trains travelling between two particular points. The chief of the railway police, who had the case in hand, after much quiet investigation, made up his mind that the pilferages occurred at a certain junction where the trains left one Company's line and passed on to that of another. At this point the trains were generally delayed an hour or two for shunting and other purposes. Within a mile of the junction was a small roadside station which employed some half-dozen hands in all, and not far from the station was a public-house. Feeling pretty sure that neither guards nor drivers were implicated in the matter, the superintendent of police called one of his trusty men to his side. 'Wheeler,' he said, 'I

understand that now and then you are addicted to taking a drop too much?'

Wheeler coloured up, coughed behind his hand, and then said in a hesitating sort of way: 'Well, sir, I don't mean to deny that once or twice I'—

'That will do, Wheeler. It is quite evident that now and then you are troubled with a dryness of the throat. You will take the six o'clock train and go down to the station at B— Junction. At the station you will let it be known that to-night you intend to be on the look-out for the thieves who have robbed the down-train so frequently of late. After a little chat, you will go across the way to the *Stanhope Arms*, and if you take with you any of the men who are not too busy to be spared, so much the better. You will stay at the *Stanhope Arms*; and when the station shuts up for the night, which it does as soon as the ten o'clock train has passed, the rest of the men will no doubt follow you there, especially if you let them see that you are one of the right sort, and not above treating them to a pint or two. Don't give the men too much to drink, but drink as much as you like yourself—in fact I want you to get as tipsy as you possibly can.'

'Do you mean me really to get tipsy, sir?' asked Wheeler in bewilderment.

'Of course I do. As tipsy as ever you were in your life.'

'But if I do that, how can I look after the thieves?'

'Do as I tell you and ask no questions. You will become intoxicated, stay at the *Stanhope Arms* all night, return to your duty as soon as you are sufficiently recovered to do so, and give me a bill for your expenses.'

Wheeler scratched his head for a moment, and then went without a word. It was his duty to obey instructions; and he did obey them. He took the train as far as B— Junction, and on alighting told the station-master, in the hearing of one or two of the porters, that he had been sent down to see whether he couldn't lay hands on those plaguy thieves who had robbed the down-train so often of late. Meanwhile, as nothing could be done till after midnight, he would go to the *Stanhope Arms* and have a pint and a quiet pipe.

In the little bar-parlour where he sat in the chimney corner, Wheeler was by-and-by joined by the foreman porter. Later on, three more of the station hands came straggling in. Wheeler treated them to drink, but partook of three times as much as any of them. As long as his articulation was tolerably clear, he kept his audience amused by recounting one yarn after another; but after a time neither he nor they knew quite well what he was talking about.

Still bearing in mind his chief's instructions, he struggled manfully with the task before him; but at length his pipe dropped from his fingers, his head fell forward on to the table; and it was quite evident to all there that Mr Wheeler was help-

lessly intoxicated. The men sniggered among themselves. 'A nice sort o' chap he is to come thief-catching!' said one.

'He's safe for the night anyhow,' said another. 'He'll not trouble anybody before daylight.'

'You'd better help me to lay him on the settle, lads,' said the landlord. 'With a pillow and a blanket he'll take no harm till morning.'

Soon after daybreak, Wheeler's slumbers were disturbed by a violent shaking. Opening his eyes, he saw his chief standing before him. 'Get up; you're wanted,' said the latter.

Yawning and rubbing his eyes, he stumbled out into the passage; but what he saw there made him rub them still harder. Before him stood three men handcuffed, two of whom he recognised as having been among his boon-companions of the previous night.

The superintendent's ruse had succeeded. Rightly calculating that the thieves—if the men he suspected were really the thieves—would take advantage of Wheeler's drunkenness, feeling themselves perfectly safe for once, and would make a foray that very night, he had followed his subordinate by the next train with two more men, and leaving the line at a station short of B—, had driven the remaining distance in a hired trap, so that no one at B— had the slightest suspicion of his presence in the neighbourhood. Planting himself and his men in three likely positions shortly before midnight, he had there awaited the course of events; with what result we have seen.

A few months later, the same superintendent effected another rather clever capture of a railway thief. At a certain large goods-terminus the mysterious disappearance of one or more packages had for some time been a matter of almost daily occurrence. The lost articles were chiefly medium-sized parcels, often samples of silk or velvet goods, and not too bulky for one man to carry off without difficulty. The goods in all cases had been received at the terminus, checked from the truck on to the stage, and there left for a few hours, while waiting to be loaded up and delivered to the consignees. When the time came for the delivery of the parcels, they could not be found; nor for a time was there any clue to the thief or thieves, and Mr Superintendent was much exercised in his mind thereby. The day and night watchmen were changed, fresh men being put in their places, but still the pilferages went on with undiminished vigour. Extra watchmen were placed in hiding behind large piles of goods conveniently left for the purpose; but all without effect. While walking about the goods-shed one day, intent upon some other business, the superintendent noticed that in a certain place some of the planking which faced the space between the ground and the floor of the platform, a height of about three feet, looked loose, and as if it had been recently disturbed. On trying the planks, he found that he could move them aside without much difficulty, and that then a dark cavity between the ground and the floor of the platform was exposed to view. Sending one of his men for a dark-lantern, and taking care that his actions were not observed, the superintendent proceeded to make an exploration of the cavity, crawling into it

on his hands and knees—fortunately he was only a little man—and taking the lantern with him. Presently, he emerged, his face one broad grin of satisfaction. 'We shall cop 'em after all, Jack,' he said to his man as he replaced the planking and walked away.

Late the same night, attended by his trusty subordinate, but without the knowledge of even the watchman on duty, the superintendent went back to the cavity under the stage and crept into it again. His man then replaced the planking and left him. Hour after hour passed, and the superintendent became horribly tired of his position. The space was so confined that he could not even sit up. He was compelled to lie extended at full length, and could only vary his position by turning from his left side on to his right. But between three and four o'clock, when the first sounds of the coming day's work were beginning to be heard, and the lamps on the up-side were being lighted, his patience was rewarded. That part of the shed where he was hiding was still in semi-darkness when he heard the sounds of footsteps coming nearer and nearer. 'My heart never beat before as it did at that moment,' said the superintendent afterwards, when recounting the adventure. 'The footsteps stopped opposite my hiding-place. There was a moment's pause, and then the loose boards were pushed aside, and a hand holding a parcel tied up with string and brown paper was thrust into the hole. There was just light enough from the lamps on the opposite side for me to see what I was about. I had previously got my handcuffs out, and had fastened one ring of them round one of the iron supports of the platform. The moment the fellow thrust his hand into the hole, I knocked the parcel out of his fingers, grasped him firmly by the wrist, gave him a sudden jerk forward, and before he could say Jack Robinson, the other ring of the handcuffs was slipped on to him, and there he was in as nice a little trap as ever I saw.' He proved to be a man who came on duty early to assist in loading up the fish and other market goods. He had generally taken the parcels while the watchman was absent for a few minutes to open the offices, hiding them for a time under a heap of empty boxes, till an opportunity offered itself for removing them to the hole under the stage. In the hole more than a dozen parcels were found. The contents of others he had either pawned or sold.

The next case was one of an entirely different kind, and the parties implicated in it were never discovered. At a certain north-country terminus there was delivered one evening a bale of valuable cloth addressed and consigned (say) to Mr Smith of A—. It was checked from the van on to the platform, and there left to be loaded up an hour or two later on. By-and-by, when the truck for B— came to be loaded up, a bale of cloth was found addressed to a Mr Jones of that town, which bale was accordingly put into the wagon and sent off. When the invoices for A— came to be made out, the bale of cloth for Mr Smith was entered on one of them, on the supposition that it had been duly forwarded, although in reality such was not the case.

About half-past nine next morning, a small pony-cart containing two men drove up to B— Station. One of the men alighted, and asked

whether a bale of cloth addressed to Mr Jones had come to hand. The reply was that they certainly had received such a bale, but without any entry for it on their invoices. The reply of the man was that he, as being Mr Jones the consignee, was quite prepared to pay the carriage if they would only weigh the bale and charge it out at the proper rate. This being feasible enough, Mr Jones's request was at once complied with. The bale was weighed, a bill made out, and the charges duly paid. Then the bale was hoisted into the pony-cart; Mr Jones signed his name in the Company's books as having received it, and the two men drove off with their booty.

When A—— telegraphed for the missing bale, and the facts came to be ascertained, there was a considerable rumpus among the officials at the sending station. The case was evidently one of ingenious collusion. It did not matter so greatly who the sham Mr Jones might be. The question was, which of the Company's men at the sending station had removed the original address of the bale and substituted a false one in its place? As it happened, a few weeks previously the Company had engaged a number of new hands, whose testimonials and antecedents they had not yet had time to investigate. About a week later two or three of these strange hands failed to turn up to their work; and all further investigations by the railway officials failing to bring the culprit to light, the loss had to be settled by the payment of something like sixty pounds.

The following story, which is of quite recent date, we extract from *The Railway Sheet and Official Gazette*, an excellent little paper published once a month, and brimful of information on matters of interest to the railway service generally. In the case here given, it would appear that the thieves were totally unconnected with any of the officials of the Company.

'A novel illustration of the ingenuity of thieves has just been afforded by an incident reported from the continent. For some time past a North-German railway Company had been suffering from the repeated loss of goods which were sent by luggage-train, and which, notwithstanding all researches and precautions, continued to disappear in a very mysterious manner. The secret which the inquiries set on foot had failed to discover was at length revealed by a rather amusing accident. A long box, on one side of which were words equivalent to "This side up," had, in disregard of this caution, been set up on end in the goods-shed. Some time afterwards the employes were not a little startled to hear a voice apparently proceeding from the box in question, begging the hearers to let the speaker out. On opening the lid the railway officials were surprised and amused to find a man inside standing on his head. In the explanation which followed, the fellow wanted to account for his appearance under such unusual circumstances as due to the result of a wager; but he was given into custody, and it was soon found that the thieves had adopted this method of conveying themselves on to the railway premises, and that during the absence of the employes they had let themselves out of the box, which they at once filled with any articles they could lay their hands on, refastened the lid, and then decamped, leaving the box to be sent forward to its destination in accordance with the address upon it. But

for the unfortunate inability of poor human nature to endure an inverted position for an indefinite period, the ingenious authors of the scheme might have flourished a long time without detection.'

THE BRAVE SWISS BOY.

A TALE FOR THE YOUNG (CONTINUED).

CHAPTER VI.—A GLIMPSE OF PARISIAN LIFE.

THE bright rays of the morning sun filled the room when Walter awoke from his long and refreshing sleep, to gaze in astonishment at the rich and beautiful furniture that adorned the apartment. Silk curtains, mirrors that reached to the ceiling, beautiful carpets, attractive pictures in gilt frames—all was new and dazzling to the unsophisticated mountain youth. He was still gazing in wonder at all these glories, when Mr Seymour, who had slept in the next room, suddenly opened the door.

'Jump up, Walter,' said he. 'Breakfast is ready, and my friend wants to speak to you; so be as quick as you can.'

'I shall be ready in a few minutes sir,' he replied, as springing out of bed, he washed and dressed himself, and respectfully greeted the two gentlemen, who sat enjoying their coffee in an adjoining room.

At Mr Seymour's invitation, Walter helped himself to breakfast; and when he had finished his meal, looked up inquiringly at the stranger.

'Well then, Walter,' said he in a kindly tone, 'tell me in the first place what you intend to do, now that you have got your money back?'

'Oh, that is very easily answered sir,' replied Walter. 'I shall buckle the belt round my waist again, and return home to-day.'

'I thought that was your intention, Watty,' said Mr Seymour; 'but it would be much safer and far easier to send the money through the post. You will then have no further risk of being robbed, and Mr Frieshardt will be sure to get it in a day or two. As regards yourself'—

Mr Seymour hesitated; and his friend took up the conversation. 'Yes, Walter—you must stay here for the present,' said he, 'and not dream of leaving me—at least for a long time.'

Walter was taken aback. What could the stranger mean? Unable to comprehend the motive of such a remark, he looked in confusion first at one, then at the other, and was greeted only with a hearty laugh.

'I am very much obliged to you for suggesting how I should send the money home,' said the lad; 'and it was certainly very strange that Mr Frieshardt did not think of that, for it would have saved all this trouble with Seppi. But what sir am I to do here? What is there to prevent my returning home?'

'A proposal that my friend Mr Lafond has to make to you,' replied Mr Seymour. 'My friend is in want of an active and trustworthy servant, and thinks that you would suit him well. I think you should take the situation, Walter, for you

will be looked upon rather as a confidential attendant than as a servant; and you will be well paid into the bargain. In a few years you will have earned money enough to provide comfortably for your father in his old age.'

The last words decided Walter. If he could only relieve his father's declining years from care and anxiety, he was content to give up his home for a time, and therefore agreed to accept the proposal. The contract was soon arranged, and Walter entered upon his new duties the same day. He wrote a long letter to his father, explaining the reason of his remaining in Paris, and comforting him with the assurance that when he returned home he would bring plenty of money with him. By the same post he sent a bank-draft to Farmer Frieshardt equivalent to the value of the cattle-money; and a few days after removed into Mr Lafond's splendidly furnished mansion. Mr Seymour did not accompany his friend, having to leave Paris to continue his travels.

'Keep up your heart, my good fellow,' said he, shaking hands with his honest young friend. 'We shall see each other again next year, I hope; and I also trust that you will have a good account to give me of your new home.' With these words Mr Seymour sprang into his travelling-carriage; the postillion cracked his whip, and tears sprang to Walter's eyes as the sound of the wheels died away in the distance.

Thus Walter, who had suddenly risen from the position of a poor drover to that of the principal servant and favourite of a rich young Parisian, found no reason to regret the change that he had made. Mr Lafond treated him in the kindest and most friendly way, so that he soon became thoroughly attached to him. But in the course of a few weeks he observed certain traits in the character of his new employer that occasioned him both sorrow and anxiety, and almost made him regret that he had not returned to his quiet but innocent home. Although a kind-hearted man, Mr Lafond was weak-minded and changeable; and like many other wealthy young men without any occupation, he was addicted to pleasure and dissipation, and spent whole nights at the gaming-table, to the ruin of both his health and morals. As he was of a delicate constitution, these excesses soon produced a very marked effect upon him, and did much to shatter his health. Had Walter been an indifferent or ordinary servant, the ruinous dissipation in which his master indulged would have given him little concern; but as he was sincerely attached to him, he could not avoid expostulating sometimes upon the reckless course of life which he led.

Early one morning Mr Lafond came home after a night of gambling, looking paler and more exhausted than usual. Walter, who had been sitting up for him, was terribly alarmed at the appearance which he presented. 'O my dear sir,' said he with a deep sigh, as he gave him his hand out of the carriage, 'how grieved I am for you!'

Mr Lafond stared at Walter with his glassy eyes, and tried to speak, but could only utter a few disconnected words that were quite incomprehensible. Besides this, he was so unsteady on his feet, that he was obliged to lean on Walter, to prevent himself from falling. The faithful servant

was terribly shocked to find his master so intoxicated as to be almost deprived of his senses, and lost no time in getting him to his room, that his distressing and disgraceful condition might not become known to the rest of the household. After undressing him, which cost a great deal of trouble, Walter got his master to bed, and then sat down and became lost in thought.

It was not until late in the day that Mr Lafond woke from his troubled sleep, and was surprised to find Walter sitting by his bedside. 'Poor fellow!' he said in a good-natured tone, 'I'm afraid I kept you waiting long for me last night. You are a faithful servant, and shall have your wages raised immediately.'

'I am very much obliged to you sir,' said he; 'but I cannot take more of your money. I have only waited here to request my discharge from your service.'

Mr Lafond stared at the young man with surprise. 'What!' he exclaimed, 'you want to leave me! What has put that in your head? Has any one here done anything to make you uncomfortable?'

'No sir, no one,' was the quiet but firm reply. 'I have met with nothing but kindness since I have been in your house, and you have been more than generous to me; but I can't bear to stay here and see you digging your own grave. It breaks my heart sir; and I would rather wander barefoot back to my own mountains than witness it longer.'

'Why, Walter, I'm afraid you're turning crazy,' exclaimed his master angrily. 'Don't let me hear any more of this nonsense! What can it matter to you whether I die soon or not? At anyrate you must stay with me, and give up such foolish notions.'

Walter shook his head. 'No, sir; I must go,' he replied. 'I can be of no use here. It makes me quite miserable to see how you waste your money in the gaming-houses, and ruin your health by over-indulgence in wine. If my caring for you were not sincere, it would be a matter of no consequence to me whether you went to destruction or not; but'—he added, while tears started to his eyes—'I trust sir, you will pardon me for saying that I cannot look on carelessly while you are ruining yourself; and so I hope you will let me go.'

The reckless gamester was quite moved at the devotion and faithfulness of his servant. Springing from bed, he wrapped himself in his dressing-gown, and walked hastily to and fro in the apartment for a few minutes in silence. At last he paused before Walter and grasped his hand. 'You are a straightforward, warm-hearted fellow,' he exclaimed. 'But the more I am convinced of that, the less disposed am I to part with you. Will you not stay with me?'

'No, my good master; I cannot,' answered Walter firmly.

'Not even if I promise to turn over a new leaf, and neither to drink nor gamble any more from this day?'

Walter was in a measure reassured by these words, and his eyes were lit up with a new hope. 'Ah! if you really will do that, sir!' he exclaimed. 'That alters everything; and I shall be as overjoyed to stay with you as I should have been sorry to leave you.'

'Then, that is settled,' said his master in a serious tone. 'I am obliged to you for speaking so faithfully to me. I know that I have been living in a foolish way; but I will be different for the future. That you may rely upon.'

Walter's joy was so great at hearing this unexpected resolution that he nearly burst into tears. Unhappily, however, he was soon to experience the disappointment of all his hopes.

For a fortnight Mr Lafond kept his promise faithfully; but at the end of that time he again yielded to the old temptation, and after a night of revelry, returned home in broad daylight in a state of complete helplessness. The servant renewed his entreaties and warnings; reminded his master that the physician had declared that his existence depended on his leading a sober life; and obtained from him a renewal of the broken promise. But alas! it proved as vain as before. In a few days all his hopes were again crushed, and his prayers and entreaties were only answered by his master with a shrug of the shoulders.

'You know nothing about it, Walter,' said he. 'The temptation is so strong, that one can't be always resisting it.'

'But it is your duty to resist it sir; and you can succeed if you will only make up your mind to do so.'

'It's too late now,' replied the other with a faint smile. 'I have fought and fought, and been beaten at last. I shall give up fighting now.'

'Are you really in earnest?' inquired Walter seriously.

'I am really in earnest,' replied Mr Lafond.

'Then I must indeed quit your service sir. I will not stay here if I cannot save you from rushing headlong to destruction.'

'Silly fellow!' replied his master testily. 'What more would you have? It will be for your direct advantage to stay with me. Look at my condition. The doctor was quite right in saying that I couldn't live another year. Remain here for that short time, and you shall be well paid for your services. I will take care too not to forget you in my will.'

The young Switzer could not restrain his emotion at hearing his weak-minded but good-natured master talk in such a careless way about death. Unable to speak, he turned to leave the room, when Mr Lafond called him back.

'Have you no reply to make to me?' he demanded in an offended tone.

'Nothing more than this sir—that your doctor assured me you might live for ten, twenty, or even thirty years longer, if you could only be persuaded to live in a sober and reasonable way. O my dear sir,' he exclaimed, 'do give up these habits, that are ruining body and soul, and I will devote my whole life to you!'

'No use!' was the gloomy reply. 'If I were to make new resolutions, they would only be broken, as the others have been. The doctor is quite mistaken in his opinion. I suppose I must fulfil my destiny. So let the matter drop, Walter.'

'Anything can be done if one is only determined,' persisted the young man, with entreaty in his tone.

His master turned away and shook his head. 'Too late, too late! I haven't the moral courage or determination.'

'Then may God have mercy upon you!' replied

the servant solemnly; 'this is no longer a place for me.'

Swayed on the one hand by a sense of duty to himself, and on the other, by pity for his terribly misled master, Walter sorrowfully quitted the apartment; and after packing a few things, returned to take his final leave. Mr Lafond, however, would not bring himself to believe in the reality of such a sudden and determined resolution, and used every argument to induce the lad to change his mind. He even begged him as a personal favour to remain; but Walter persisted in his determination; nor could the most lavish offers of emolument induce him to stay and be a helpless spectator of the ruin of one whom he was unable to save.

'If I were only as determined as you are,' sighed Mr Lafond, 'how much better it would be for me! But now it is too late! Farewell then, Walter, if you have made up your mind to quit my service. But though you leave me, it is not necessary that you return to your mountain-home. I received this letter from my uncle, General De Bougy, who lives in Rouen. The old gentleman is in want of a steady and trustworthy servant, and asks me to send him one; so I think the best thing you can do will be to go there for a twelvemonth. You will find him a better master than I have been; and if you are really determined to leave me, you might do worse than enter his service. I feel sure you will be comfortable.'

Walter shook his head. 'I shouldn't like to go into another house sir, after the experience I have had in your service.'

'But you will be serving me, Walter, if you go and assist my uncle in his old age. Recollect, I only ask you to go for a year. It is the last request I have to make. Surely you won't refuse?'

'Well sir, I will go for a year, since you urge it so strongly,' assented Walter, who could no longer resist his master's appeal. 'When shall I start?'

'When you please. You will be welcome there at any time.'

'Then I will set out at once, sir; the sooner our parting is over, the better.'

'But if it is so painful to you, why go away at all? You know how glad I should be for you to stay.'

'And you know sir, why I am obliged to go,' replied Walter firmly. 'Pardon me, dear sir, for speaking any more on the subject; but if you only had had the resolution to—'

'I'll make another trial, Walter,' said Mr Lafond with a smile that contrasted strongly with his sunken and wasted features. 'You shall hear from me in three months,' he continued; 'and perhaps— Well, we shall see. Good-bye, and my best wishes go with you!'

Walter grasped the hand which his master extended, and kissed it fervently. 'God bless and preserve you!' said he with tears in his eyes. 'If prayers, earnest prayers for you can be of any help, you will be saved!'

'Farewell, Walter. You have been a faithful servant,' exclaimed Mr Lafond, with painful emotion. 'God be with you—perhaps we shall never meet each other again!'

So they parted. Walter went by the first conveyance to Rouen to the house of General De Bougy; and his former master sunk into profound

grief as he dwelt upon the affection and solicitude which the young Switzer had shewn towards him. 'Only a year sooner,' he mused with torturing anguish, 'and I might have been a saved man! Now, alas! thou hast come too late, noble and generous heart!'

LIFE ON A CALIFORNIA RANCH.

It became the fortune of the writer to leave San Francisco in September 1878, and after crossing Santa Clara Valley—one of the richest in the state—to ascend by a fine stage-road into the very heart of a spur of the Santa Cruz Mountains. This road begins at a little village at the foot of the hills, and creeps gradually higher and higher, turning this bluff and that spur, until after a league, the traveller looks down into the glowing valley, and if timid, shudders in secret at the depth.

The path thus leading away from the inhabited valley, full of men and towns, into the quiet seclusion of the land among the hills, finally comes to a fair broad region, where the 'ranchmen' plant their acres with vines and fruit-trees, and where a stranger may live without ever wishing for the world of commerce, or thinking of it. There are high hills upon every side except towards the west. In that direction the land sinks in alternate ridges and ravines toward the ocean, and the great redwoods line the horizon. The houses are made of inch redwood boards and building-paper, and are accordingly somewhat rude structures, but they sufficiently answer the purpose in this agreeable climate.

There is no stone fit for walls, like those with which the New England farmers separate their fields, and so the inhabitants split the trunks of the redwood pines into rough pickets three inches square and five feet long; and after driving them into the soil in lines, bind them close together at the top with strips of board. The fence thus constructed is cheap, quickly made, effective, and durable. There is little concern for appearances; the soil of many years remains undisturbed upon the wagon-wheels; no flower-garden is well cared for; they mend the harnesses with bits of ropes; and they trust little or nothing to the vanity of paint. You see no vegetable gardens, no patches of potatoes, lettuce, peas; no little areas carefully fenced and carefully cultivated in odd moments, when greens are in season. It does not pay to be at the trouble, and for this reason—the warmth of the soil and the early heat of the sun tend to force the vegetables into premature ripeness, and thence into coarseness of fibre.

The grapes that grow in this favoured place are wonderfully large and fine. They are much better than those of the valleys, and are eagerly sought for by those who use the better kinds. A neighbour to me grew sixty varieties last season, though it is probable that not more than twenty kinds went to market. Every one's vines are prosperous, and the yield is enormous. The plants grow lying upon the ground; the dryness of the summer preventing the rot which attacks them in regions where rains are more frequent. It is quite a common thing to go out in the cool of a delicious morning and cut off bunches of these grapes, and devour them three or four at a time,

gazing meanwhile at acres more of the same kind. A certain ferocity develops in the reveller after a few weeks' indulgence in this sort of repast. One would lose the respect of all his friends were he to write down faithfully what his capacity for grapes at length becomes. In number, in weight, in kinds, the result is alike prodigious.

The ranchmen make boxes out of the clear redwood, and pack twenty-five pounds of grapes in each—all honestly picked, and decorated with the leaves of the vines. These are carried in wagon-loads to the valley below or to Santa Cruz on the coast. Now and then you perceive a most delicious odour in the roadway, and after a while it is seen that the dust has received a slight sprinkling. You walk on, half intoxicated, charmed by the soft air, the scenery, and the shade of the overhanging trees, and you overtake a wagon laden with grapes *en masse*—a purple sight, rich and tempting. They are on the way to some wine-press. Nearly every ranchman fills a few casks yearly with the juice of some of his grapes, thinking that he is laying up a claret which will be fine some day. But he has his labour for his uneducated pains, and produces only an acrid liquor the reverse of palatable.

The Californian ranchmen have wonderful aptitude for driving, and one sees some pretty good examples among these hills. The road down the mountain-sides is entirely unguarded upon the outer edge, and the descent in most places is precipitous. A balky horse, or a fractured wheel, or a slight carelessness in handling the reins, might easily send a carriage-load of people to destruction—and an awful destruction too. The path is wide enough for one pair of wheels only, but at intervals in favourable places it broadens so that teams may pass each other. To drive in such a manner as not to meet another traveller midway between these places is a special branch of the art. The huge lumber-teams which carry wood from the mills in the mountains to the yards in the valleys, being unwieldy and very heavy, are especially hard to manage. Yet the drivers always seem easy and nonchalant. First there is a large four-wheeled oaken truck, with a seat in front ten feet above the ground; behind it is another truck, something shorter, but still enormously stout. These are fastened together, and loaded with from ten to fifteen tons of freshly sawn lumber—boards and joists. This mass is drawn by six or eight mules or horses, guided by reins and a prodigiously long whip. The first wagon has a powerful brake, worked by a long iron lever by the driver upon his seat. The driver is a man of nerve and courage. His skill must be of the highest order. It will not do for him to take fright even if in imminent danger, and he must know almost to a hair's-breadth where he can go and where he cannot. Towering up far above the road, overlooking the most stupendous depths, and guiding with a few slender lines a tremendous force, he must needs be an adept and a tireless one. But a beholder, ignorant of the danger that constantly surrounds him, would say his work was simple, and that he managed matters with ease. True, he seems so. With his broad-brimmed hat shading his sun-burned face, his sinewy hands holding the reins with carelessness, his legs out-

stretched, with one foot feeling the all-important brake, he jogs onward with his monster charge without trouble or concern; the bells upon the horses' breasts jingle a little tune; the great wheels crush the stones in the path; the load creaks like a ship's hull in a sudden gust; wild birds sweep down into the hazy, sunny depths below—yet the driver seems to take no heed. But let a 'scare' take place; let a herd of runaway cattle appear at a bend and set the horses wild, and then see what will happen. The day-dreamer will become a giant of strength. He is up in a flash; he shortens his hold upon the reins, and feeling his wagon start up beneath him, places a foot of iron on the brake. The horses snort and rear and surge; the harnesses rattle, the dust arises, the load shrieks again, and the huge wheels turn fatally faster and faster. An instant may hurl the wagon down into the valley with its struggling train—a mad rush to the other side of the way may end all in one horrible plunge. Muscle, eye, brain, skill are then brought to work so splendidly together, that the peril is averted, and the looker-on, who knows not the ways of the land, regards the teamster with profound respect thereafter.

The horses that are used in the country are mostly of the mustang sort. A mustang is a creature which has indeed the form of a horse, together with certain characteristics of his own—namely, a bad memory, which permits him to shy at a harmless shrub twenty times a day, if he sees it as often; ingratitude, which permits him to kick and injure his best human friend; absence of mind, which permits him to run furiously after it has been made clear to him that he is expected to walk; and a power to develop energy with great rapidity, which enables him to change in a twinkling from a simple trustworthy looking nag into a snorting, biting, kicking demon. With these vices, he has the one virtue of being enduring as so much brass.

There is a peculiar dress worn by the out-of-door folk of this land among the hills that deserves to be introduced into other lands, so fit is it for the wear and tear of farming. It consists of pantaloons or overalls, and jacket, made of canvas, coloured brown, and fastened in all important places with small copper rivets. It wears astonishingly well. The hunters wear a 'jumper' of the same material, filled with pockets inside and out for their innumerable wants, while the lower part forms a game-bag of considerable size.

Trees of various kinds, such as oak, cherry, &c., form an agreeable variety, where so much 'redwood' predominates. The redwoods have become famous for their size and height all the world over, the *Wellingtonia gigantea* of Calaveras belonging to the family. They usually grow in fraternal groups of three or four, and it is impossible not to feel impressed by their solemnity when walking among them. The ground at their feet is covered with their browned spines, and their trunks rise one hundred and fifty feet before putting forth a branch. Many are ten feet in diameter at ten feet above the ground, and a few are so large that speculators hew and burn cavities in the bases when the road runs conveniently near, and therein set up a kind of restaurant for the benefit of the thirsty traveller!

The writer had hoped to leave at least the dust behind, and derive from the tall trees and the cooling streams a little of the summer comfort which had been so signally denied him in the region below. Disappointment, however, was his lot. On reaching the hills he found the brooks dry, and their courses marked with boulders, upon whose nether sides one could light a match. The depths of the woods were airless ovens, where in a moment the hands and face ran with perspiration. There was not a blade of grass to be seen. The earth was brown, powdery, and hot. The dust in the roads was astonishing for its depth. It arose in obedience to the slightest breath, and after a little acquaintance with the sunburnt region, one foretold that a friend was coming by seeing a moving cloud over the top of the hill. For twenty yards on each side of the highways and lanes the underbrush was whitened. When people went to ride, they pulled linen coats over their better garments, and tied their wrists and collars. For the first mile or two the traveller snorts the dust out of his nostrils, and at intervals surveys his powdered clothing with dismay. Through his blurred eyes he barely sees the features of his neighbour upon the same seat; the horses are entirely beyond his view; a sense of suffocation overcomes him; and all sounds are drowned as they are in a snow-storm. At length, however, instead of being annoyed at the quantity of dirt which settles upon him, he refrains from shaking himself, and with a certain amused interest, wonders how high the pile upon the back of his glove will grow before the journey comes to an end. The dust is a feature of the land, and strangers who have heard of it, regard it with curiosity, as they do their first gold mine.

This persistent recurrence of dry days, the everlasting pouring down of yellow light upon the parched yellowish landscape, the breathing of hot air from all quarters, the absence of flourishing crops and greenery from the fields, soon dry up the soul of the new-comer, and weary out his patience.

At the close of October the skies were yet clear, the atmosphere a little hazy, the mornings and evenings enjoyably warm, and the nights refreshingly cool. The fruit of the orchards had been marketed long since, and the grapes were two-thirds gathered. The affairs of the year were winding up; two or three weeks in November would give the farmers ample time to clear away their tardy crop, and then the winter might fall, and welcome. One bright day succeeded another; the 'verdello' ripened, yielding sweet, pale-green grapes; and piles of newly made redwood boxes stood in every yard ready for their luscious burden. At length there came a moment when further effort became useless; when the summer, with its fruits and its glories of colour, went out, and winter, like a 'spook' in a pantomime, came suddenly in.

In California, the two seasons end and begin respectively with the same event—a shower of rain. Autumn does not intervene; there is no fall of the leaf, no augmentation of the winds. Last year the summer ran on until the 1st of November. At eleven o'clock in the forenoon a few drops fell. After that the people spoke of the winter as having arrived. Everything seemed taken by surprise; the rain had come; the horses

gazed strangely about them; the children ran out with wild noises, and stood bareheaded and laughing in the thick of the storm; the men leaned in the doorways with their hands in their pockets, silently pleased; the dust turned slowly into mire; the leaves of the madrones, the cherry-trees, and the oaks lifted themselves up and glistened in the pale light, and mills began to murmur everywhere. The yearly adjustment had begun; the other side of the balance had started downward, and the land rejoiced. Everything was changed out of its old course. The choppers, with their axes upon their shoulders, came out of the deep recesses of the woods, the mills put out their fires, and the grape-gatherers came down from the vineyards. The teams ceased to traverse the roads, stages were exchanged for wagons, and letters and papers came but rarely. A sense of being thrust out of the world, a notion of common ill-fortune, made good neighbours of the people in the foot-hills, and a lively interchange of visits between ranch and ranch soon followed the beginning of the rains.

Rain followed rain in quick succession, always coming from the Pacific, and nearly always attended with a degree of cold that made it uncomfortable to stop in the open air even if thickly clad. The ranch upon which the writer lived was some eighteen miles from the nearest salt-water; yet even as far inland as this, there were none of those calm gently dropping showers that fall in England—those soft rains that gather the odours of the gardens, and instil the senses with so much that is grateful. Here the rain always came on the wings of a tempest, and poured down furiously. But given a pleasant day in the midst of this Californian winter, and the discomfort of the rain and its attendant gloom vanishes, and the dweller in these parts goes forth charmed. The very early morning of one of these incomparable days is truly a wonder of softness and gentleness. The geniality of those few early hours is inexpressibly soothing; one is not exhilarated, but quieted; not wrought up to saddle his horse and ride a race, but impelled rather to sit in some sunlit spot and watch the world awaken in tranquillity. By the latter part of November the farmers are out with their ploughs, and the toil of the sower begins. The fields grow dark with the subsoil, and then change, and grow verdant with the grain. Rye-grass springs up on the brown hill-sides that have been dry all summer, and the streams in the deep wooded gulches make a low roar that never ceases. The flowers gather themselves up and shew their faces, and the almond-trees put out their clouds of fragrant blossoms. On the oaks, whose branches are hung with mistletoe, a gray-green moss gathers and sways to and fro above the head. Numberless blue-birds dash across the fields, and now and then a meadow-lark lifts up its clear sweet voice, and turns December into August. Quail, rabbit, and deer are abroad, and in the night-time the coyotes howl and bark in the forest.

The ranchman's one amusement is dancing, which he enthusiastically avails himself of. No matter if the night be stormy—no matter if the host's house be a board-cabin a mile from a road, and deep down in a gloomy ravine where the sun and moon rarely penetrate—the ranchman is bound by all the instincts of his nature to be on the spot, and to stand up in every

quadrille in which he can find a place. Wood-choppers, farmers, teamsters, miners, squatters, together with a number of wives and daughters, some remarkably pretty, and some remarkably ugly—get together at an hour's notice, and keep up reels and polkas until a very late hour next morning. A single violin is the motive-power. No matter if a cloud of dust arises from the ill-cleansed floor of the woodman's shanty—no matter if few appear upon the scene who have not danced together hundreds of times—the fun abates not; and at the breaking up there is no one who will not promise to be on hand 'to-morrow night,' in case to-morrow night is to be marked with another similar festivity.

THE COOL ENGLISHMAN.

CHAPTER II.

ONCE more Simon laid himself down for the enjoyment of his often-disturbed repose, and once more he sank into a gentle slumber. And now for the third time he was awakened, but from a cause very different from the other occasions. The scene which ensued was as follows.

When Dan the waiter took his departure from the door of the obstinate guest whom he had been so vainly endeavouring to arouse, the flood must already have been descending upon the valley. For a brief interval, however, Mr Simon Lee was not awakened by the noise of the torrent, partly because it was still at a distance, and partly because the roar which it emitted was deadened by the intervening walls. He was only conscious of a soft, rushing, and not unpleasing murmur. (This murmur could hardly have proceeded from the flood; but was more probably due to the stream outside, which had become swollen in the night.) If, on a summer forenoon, the reader has ever lain with his back on the grass, and listened to that most delicious of all sounds the sighing of fir-tree tops in the breeze, he will be able to form some conception of our hero's sensations. There lay the blissfully ignorant Simon in bed, with his nightcap perched slightly over one eye, half unconsciously enjoying that sweet and gentle murmur. Presently, as the sound grew louder, he became more fully awake.

'What can that noise be?' thought Simon drowsily. 'Rain? I never heard rain like that before. Wind? It's too loud for wind. And, dear me!' exclaimed Simon, raising himself to a sitting posture in bed, 'what an extraordinary noise! It sounds like some one pouring a can of water outside my door! What curious people the persons in this house must be to pour water about outside the doors of their guests! Is it a regular custom in Ireland, I wonder? But, dear me!' added Simon, for the noise was growing still louder, 'if I don't stop them they will be flooding the whole house. Hillo, there, hillo!' cried Simon, raising his voice. 'You can leave off making that noise, thank you! It's very kind of you to do it, but I have heard quite enough; thanks!'

But the noise instead of leaving off became still louder. 'Extraordinary persons these Irish,' quoth

Simon again, half-angrily and half-sleepily. 'If they have a guest or stranger staying with them for the night, they appear to make it the business of their lives and their greatest delight to endeavour to wake him up at all possible hours in the night. First comes a lumbering waiter and bangs at the door; then some one comes and pours water about, and won't leave off when he's told to. But if they expect *me* to get up, they're mistaken. And so saying, Simon drew the bed-clothes over him, and laid himself down again to sleep. But scarcely had he done so when a horrid thought struck him. 'Is it possible,' was the sickening thought, 'that the house can be on fire? Can the noise proceed from the fire-engine playing water on to the top of the house? Mercy preserve us!' And with these words in his mouth he leaped out of bed, and with his nightcap still on his head, scarce stopping to put on his clothes, rushed downstairs. The house was entirely deserted. All the doors stood open. Numerous articles lay strewn upon the floor, which their possessors had left behind, being probably too heavy-laden or too frightened to carry them.

The hero of this memoir was horror-struck as he viewed this strange spectacle. He called, but no one answered; screamed, and finally, in a frenzy of terror and apprehension, rushed to the outside door, and was on the point of escaping through it, when he was driven back by the same noise he had heard before, hitherto deadened by the intervening walls, but now swollen to a roar. It was indeed the harbinger of the flood, which in a few moments was to burst on the devoted dwelling. A sudden instinctive feeling of the nature of the danger which now beset him, for the first time penetrated into Simon's mind. With hasty and trembling steps he scrambled up the staircase and tottered into his chamber. He was just in time. A sound like thunder literally shook the house as the flood approached. The windows rattled as with the anticipation of the coming devastation. Sick with terror and gasping for breath, Simon, who had put his head out of the window, drew it in again as quickly as he could when he saw the mighty torrent bearing down—so it seemed—on the inn itself. There was a roar, a shock like an earthquake as the flood came on; and the water tossing and foaming, rose half-way up to the window of the chamber; while within the house it could be heard splashing and dashing in wild tumult. The cheek of the terrified prisoner was blanched with an agony of fear and apprehension, as he stood clinging to the bed, scarce knowing where he was, and momentarily expecting to be whirled away by the torrent. But the house being, as we have said, of solid construction, withstood the shock. For the time then it was safe. But the sight which met Simon's gaze as he stood, staring with all the intensity of terror, was a sight indeed to be remembered. The turbid water rushed along like a mad thing, foaming, dashing, and sweeping everything before it. Huge trees torn up by the roots were whirled along in its gigantic eddies, rising and sinking in the waves. The flood literally leaped and bounded in the air, as though rejoicing in the havoc it was working. It seemed like some huge demon let loose from the chains in which it had been pent, to wreak vengeance on every object within its reach.

Its surface was fretted with waves, which with their curling crests and leaping forms, resembled—so it seemed to Simon's excited imagination—a pack of fierce wolves hounding the terrified occupants of a sledge of which they have caught scent, and thirsting and yelling for their prey!

The raging torrent bore on. Simon spell-bound, viewed it tearing down the valley at headlong speed. At a short distance from the inn stood a mill. The flood met it; but the crash which ensued was lost in the roar of the water. The mill sank down into the fatal embrace of the boiling waves, and was immediately whirled away. Farther down stood a good-sized bridge, solidly built; and in the twinkling of an eye, so silently, so noiselessly that Simon could scarcely believe his senses, the bridge, strong as it was, was swept away!

How the fine genius of Coleridge would have revelled in the sight! It was precisely the spectacle which a pen such as his would have magnificently embodied in verse. There is a well-known poem by him entitled *Fire, Famine, and Slaughter*, wherein he has powerfully described a scene somewhat similar. 'Fire' is there personified and represented as a gigantic fury of colossal stature, who is recounting her recent exploits to her colleagues 'Famine' and 'Slaughter':

'Sisters, I from Ireland come;
Hedge and corn-field all on flame.
I triumphed o'er the setting sun;
And all the while the work was done,
On as I strode with my huge strides,
I flung back my head and I held my sides.
It was so rare a piece of fun
To see the sweltered cattle run,
Scared by the red and noisy light,
With uncouth gallop through the night.'

Fine as this passage is, we think that Coleridge, had he been in Simon Lee's place, might have found a still nobler demon in 'Water,' for nothing could have been more sublime than the mighty torrent we have attempted to describe, dancing and tearing onward down the glen and through the valley, and tossing huge trees like playthings in its gigantic arms. The water, here and there whitened by huge flakes of foam, bore on its surface not only trees, but vast fragments of turf, covered with brushwood and weeds. These floated swiftly along, sometimes sinking in the waves of the torrent, and sometimes rising suddenly from the depths of the water. The whole scene was so strange and fantastic, that Simon could scarcely believe that he was not the victim of some hideous delusion or of some unhealthy dream.

Several hours passed away in this manner, Simon, anxious and terrified, momentarily expecting to be swept away, or buried in the ruins of the inn, when it should succumb to the force of the flood. To him every minute seemed an hour, every hour a day. The water he could hear dashing against the steps of the staircase. Worse than all, it seemed to be ascending higher and higher every moment. Each splash which it made against the walls or wooden steps fell on Simon's ear like a death-knell. Each minute his terror grew more extreme. His face was so ghastly, that when he happened to catch sight of it in the looking-glass of the chamber, it startled even himself. As he listened, he could hear the splashing in the

interior of the dwelling growing louder. It wanted only this to work up Simon's apprehension to a point beyond endurance, for at this stage of the proceedings our hero sank into happy unconsciousness.

How long Simon remained in this trance is uncertain. When, however, he awoke it was about eight o'clock in the morning, and the gray light of dawn, by means of which he had witnessed the flood and its ravages, was exchanged for the rays of the morning sun, which streaming through the latticed window, gradually aroused him from his swoon. Our hero lifted his head drowsily, and dazed and stupefied, succeeded at length in exchanging a vertical for a horizontal posture. At first he hardly realised where he was, or the circumstances under which he was placed; but when the adventures of the night came back to his remembrance, it flashed across Simon that he must have been completely and wonderfully preserved from the danger which had threatened him. For though a considerable space of time had passed since he had first resigned himself to unconsciousness, the house had remained firm on its foundations,* nor had the water risen sufficiently high in the interior of the dwelling to endanger the life of its solitary inmate. Simon therefore was safe. And yet, great as was the relief which this discovery afforded him, we cannot say that he displayed any very strong manifestations of exuberant delight when the reassuring fact dawned upon him. He took it all very quietly and composedly—we had almost said philosophically, which is, at anyrate, at variance with the assertions of some people who still are possessed of the idea that he then and there flung his cotton nightcap to the ceiling, and performed a sort of hornpipe dance on the floor. But even if we could put aside or forget the indecorum of such a proceeding, and reconcile it with the circumstances of the case, it is so completely at variance with the customary soberness and gravity of that gentleman's demeanour, that we lean to the philosophical side of the argument.

Meanwhile the landlord and the landlady and the other denizens of the inn were anxiously waiting on the hill-side for the flood to subside. The air was raw, and so piercingly cold indeed, that it almost literally froze their blood. To secure themselves from its deadly influence, they wrapped themselves in blankets and sheets, which they had carried with them in their flight, and kept perpetually moving to and fro, resembling in fact so many spectres in grave-clothes engaged in their nightly revels. They had had timely warning of the approach of the flood, and from their elevated position had seen it encircle the inn to a considerable depth. It was no wonder therefore that they thought with sinking hearts of its effects on their little home. The hostess wrung her hands in agony, as the picture arose on her mind of fractured glass and crockery, and the bedraggled linen which had once been the pride of her heart. The landlord groaned as he thought of the cows and the pigs which had been purchased at the market only the day before.

'The purtiest critturs that ever was seen,' said he sorrowfully; 'and the English gentleman too,

so dacent and fair-spoken! Bad luck to it! the pigs an' them lovely cows'—

'Pigs! cows! ye fool!' interjected his help-mate gruffly; 'what's them to my new sheets and iligant furnishings? We'll never see the like o' them again!'

While this little colloquy was going on, Dan, who had so vainly endeavoured to arouse Mr Simon Lee from his slumbers, approached the worthy pair.

'What's come over the English gentleman, Dan? Why didn't ye bring him down with ye, me boy?' said the landlord, who now for the first time had composure enough to put the question.

'Sure how could I?' replied Dan; 'sorra a bit of him would git up.'

'Did ye tell him that the floode was coomin'?'

'Sure I did.'

'And what did he say?'

'Why, says he, as cool and unconcerned as Biddy M'Guire's cow, "I bein't agoin' by it." Who knows, but he's many a mile down the wathers by this time, poor gntleman. Ah! he was a cool one!'

In this last sentiment the landlord and his belated companions were not long in acquiescing; for in a short time Dan had quite a crowd of listeners round him, composed of the inhabitants of the village, who now heard with sorrowful interest the story of the 'cool Englishman' who would not get up from his bed even to avoid destruction!

So the hours of that eventful morning wore away. At about six o'clock the sun rose wan and red behind the hills, and revealed to them the inn half buried in the water. At seven o'clock the violence of the flood began to slacken; and by eight o'clock the water had sunk so far that the landlord and his family, accompanied by their neighbours, ventured to descend the hill. As they neared the inn, they were able to discern more clearly than they had hitherto done the nature and extent of the loss they had sustained. The water which had penetrated into the inn, had in retreating, carried with it various articles of furniture, linen, &c., leaving in exchange a somewhat less desirable commodity—mud. Alas too for the pigs and cows! The cows had both been drowned in their byre, and now lay half buried in slime and entangled with weeds. Three of the four pigs had been carried away by the flood; one of them, the pride of its master's heart, lay stretched dead on a bank. The inn itself presented a sorry spectacle, the whitewashed walls being muddy and discoloured, and the glass of its windows shattered.

Whilst the family and their friends were bemoaning the hapless fate of the cool Englishman, and devising measures for recovering his remains, a sudden and startling noise was heard proceeding from the interior of the inn. It sounded like some one in large clumsy boots descending a flight of wooden stairs. This noise considerably alarmed the neighbours, who had imagined the house to be entirely unoccupied; nor were the landlord and his family less alarmed, as they speculated upon the ghost of the English gentleman, who they all imagined had been carried away and drowned by the flood. Many of the most timorous shewed a strong disposition to flee, and one of them hazarded

* Its preservation, we are informed, was due to a large bank which partially sheltered it from the water.

in a whisper that it must be the Demon of the mountains, a personage held in great awe by the villagers at that time, and who was represented by local traditions to emerge from his place of concealment—a woody covert in the glen above—in time of floods, and to stalk down with gigantic steps into the valley below. The conjecture thus thrown out as to the cause of the mysterious noise inside the inn was but too readily believed by the other rustics; but Dan valiantly combated the absurd notion. But at that very instant, however, the true author of the disturbance appeared to view. This was, as the reader will have guessed, no other than Mr Simon Lee himself!

If the Demon of the mountain presented half the extraordinary appearance that Simon Lee presented when he issued forth from the inn-door before the astonished eyes of the assembled villagers, that Demon must have been well worthy of his race and of his name; for be it known that our hero came attired in nought but a long blue dressing-gown, a pair of heavy boots, and a white cotton nightcap. And so sudden was this apparition, that the villagers manifested more than ever a strong disposition to take to their heels, and would doubtless have made themselves exceedingly scarce had not the valiant Dan again restrained them.

'The sorra a Demon is there,' he shouted; 'sure, it's the cool English gintleman himself. Look at his dressin'-gownd and noightcap. Did ye iver see the Demon wearin' a dressin'-gownd loike that before?'

While Dan was thus rallying the fears of the assembled rustics, our hero advanced in a dignified manner, astonished at the sensation which he appeared to have excited. After a moment's consideration, however, he came to the conclusion that it must be all due to the awe and respect which—as he flattered himself—his deportment never failed to inspire. Much gratified by this idea, he infused into his manner even more dignity than was his wont.

Attired in his long blue dressing-gown and huge white nightcap, and situated as he was with regard to those who had given him up as a lost man, Simon may well have awakened terror in the superstitious minds of those ignorant rustics.

Gradually, however, they discovered their mistake, and having learned that it was really the cool Englishman, and no apparition, they mustered up courage enough to approach him.

Superstitious fear, we may remark, is near akin to superstitious reverence—reverence, that is, for people who do not deserve it at all, or only in a small degree. The villagers who had at first been afraid of Simon, now lionised him. The account which Dan had given them of his bravery had so worked upon their imaginations, that they now came to regard him as some great hero, and testified their admiration in a way which was somewhat unpleasant to the object of it. There was literally a rage for him. The rustics shoved and jostled each other in their efforts to obtain a nearer view of the illustrious stranger, at the same time giving vent to their enthusiastic emotions in such exclamations as, 'Three cheers for the hero of the inn,' 'One cheer more for the brave Englishman,' and the like; and as there were more than half a hundred of them, and each rustic was

gifted with stentorian lungs, the clamour may be better imagined than described. To add too, to the confusion of their hero, the rustics crowded round him so closely, that the unfortunate little man suffered not a little physical discomfort. It was therefore with no small difficulty that Simon succeeded in extricating himself from the hands of his troublesome admirers; and having at length done so, ascended a small knoll, and there took up his position; while the natives formed a dense circle below him, their numbers being every moment augmented by fresh stragglers from the village.

A WORD ABOUT TOYS.

THOUGH toys are becoming every year more complete, more expensive, more luxurious, it is a question whether, for all their wealth of playthings, the Ernests and Ediths of to-day have a real advantage over the Jacks and Jills that went before them.

Jack of the good old times had his ship which he himself constructed, and which was always imperfect, and often ungainly. He had his box of tools, and was handy with them; and his soldiers—two dozen in a blue card-board box, with a picture of a battle on the cover—were the greatest heroes that ever trod the earth. They were the delight of his holiday heart, and so was his brass pea-cannon, until on some luckless and very early day he discharged it with too much military ardour, and pulling out the spring, disabled his whole battery of artillery at once. As for Jill, she had her doll, which she loved with a distinct personal affection, and which Jack despised and yet tolerated. She held long conversations with it on the moral responsibilities of a young lady with such a grand dress—made out of a piece of her own old muslin frock: she cut out and sewed its clothes, dressed it, and put it regularly to bed. A lady of advanced age of our acquaintance, noted for taste in dress, traces her accomplishment to the practice of making doll's clothes when a girl. The old-fashioned toy system at least among ladies had therefore its uses.

As for Jack and Jill together, they lived in a realm of fancy as bright, if not as tangibly real as fairyland itself—for fairyland was real, at least to Jill. They were king and queen when they chose, had 'sham' armies and a 'sham' court; killed each other in battle, with brown-paper armour on their gallant breasts. They had a castle on the top landing, with more gorgeous tapestries and furniture—out of the lumber-room—than are to be found at Windsor. They played at 'house' behind the easy-chair, and served princely suppers with delicious dishes of orange-peel and paper. We have known children to go farther than this, and soon forgetting all toys from the shop, amuse themselves endlessly with a quantity of coloured bugle-beads ripped from old mats, and such odds and ends as old squares of paint, neat American clothes-pegs, and draughtsmen. With these poor materials and a foreign

coin they were wonderfully constructive. The beads standing on end served for armies; or they constructed cities, houses, railways and railway companies with full stock, or banks for which they kept accounts, though necessarily of a most primitive nature. The coin was used to decide, by tossing up on a corner of the table, whether the men fell or stood in battle, whether passengers came into the 'paint' railway carriages, or depositors to the bank. The tossing was carried on with the greatest intelligence, and thus chance was made the grand new element in this wonderfully diversified system of play. Happy Jack and Jill! wherever Fate has sent you drifting now far out into the real world, you have carried with you, from your old self-created unreal world, gifts with which no fairy godmother could have dowered you—a power of imagination vivid and inexhaustible, a quick invention, a capability of rising from the poor tangible sources of enjoyment to the rich and invisible ones; and above all the faculty of being easily made happy, which is in itself a purse of Fortunatus such as too few in the hard-worked world are lucky enough to possess.

Now, Ernest and Edith, born some years later, and endowed from their infancy with a silver spoon, have such an abundance of perfect and luxurious toys, that they run the risk of losing not only most of the childish pleasures of fancy, but much of the grand imagination and ready wit which the nature of their toys helped to bestow on Jack and Gill. Look for a proof of this at the dolls destined for dainty Miss Edith, which are to be seen any day in the Burlington Arcade, or which were, last year, shewn in far more imposing array in the Paris Exhibition. Dolls ranging to several guineas in price are common enough in London; but in Paris a greater excess was reached. In the Exhibition were to be seen dolls dressed in the most unchildish manner in the highest fashion, placed in a sort of tableau arrangement, every part of which was minutely perfect. For instance, there was a drawing-room in which the mimic upholstery was of the richest description; the waxen ladies were supposed to drink tea from a miniature set of real china; the clock upon the mantel-piece had a tiny mechanism that made it go; and the pianoforte, small as it appeared, proved to be no dumb show when its keys were touched. We cannot suppose that even the most wealthy are in the habit of giving to their children such wonderful effects of mechanism as this; but articles of lesser degrees of luxury, perfect and marvellous, are often enough played with and thrown away by children whose parents can afford a few extra guineas for their amusement.

The dolls' clothes are no longer made by the deft fingers of little girls; they are the work of milliners and doll-makers, who save the purchasers all wholesome trouble in the future; and the sizes of Parisian dolls being numbered, and their shoes, clothes, and hats numbered to correspond in the shops, the little girl who requires a new doll's mantle or pair of shoes has only to go to the toy-shop and state the number of her doll, to obtain something

exactly fitting it! In a word, the best days of doll-keeping seem to be over, and with the simply dressed dolls, or those that their little mistresses clothed with their own busy fingers, all the best meaning of the toy is vanishing. Once the much-loved doll led to taste in arranging and fitting pieces of dress, and then to a just pleasure in the finished work neatly done—work which led to the pretty custom of cherishing and treasuring up and hugging still the dear old plaything, even when its beauty had departed. And it led also in not a few cases to better things. For instance, there was but an easy step from the pleasure of doll-dressing to that beautiful and but too rare custom of the children preparing clothing at Christmas-time for the poorest infant that could be found.

Master Ernest's toys keep pace with Miss Edith's. There was but a poor show of boys' tool-boxes to be seen in the Exhibition, which one may take as a fair index of the present fashion of playthings. Soldiers, of the new solid-lead make, were there in boxes containing hundreds—the result of which last arrangement is that, for the child, the fatigue of preparation is greater than the amusement of the game. We have seen a little boy tire of 'standing up' his men before there was even talk of the battle beginning; and his father, who had a man's perseverance and patience, set the troops in order. There were also forts elaborately made, but not permitting any play of invention in placing or managing their garrison. Instead of the good old race games—at which we ourselves have played not till all was blue, but till all was red, that being the complementary colour of the bright green board—there are nowadays circular boards covered with dark-green, on which horses run by hidden mechanism, one being destined to run faster than the other; and the only interest of the game attaching to guesses as to which is the fast horse, and consequent bets thereon—a fair introduction for Master Ernest to perilous speculation on the turf.

In the old days, Jack took a pride in securing a suitable piece of wood at the timber-yard, and slowly shaping out of it his own boat or ship, and carving every mast and yard. In these days, Ernest, when he wants to construct anything, has only to buy the various parts and put them together. Of course money is necessary, but he is never at a loss for that; and instead of saving up pence like Jack to buy wood and tools, he saves shillings and half-crowns, and purchases everything, beginning with the carved and painted hull, and going down to minute blocks and capstan and compass. Of course his ship is much finer and more correct than was Jack's of old; but it is to be doubted if he had as much real pleasure—not to speak of instruction—in putting it together as Jack had in laboriously and diligently making his. So it is with the whole range of playthings. Fancy and imagination are no longer brought into exercise by them; and these are qualities which are of no small value, and which children possess at the outset in an extraordinary degree. A taste for money is developed, and an inability to enjoy small pleasures or be amused by little things. Of those who have considered the question, there are few who will not admit that the luxurious toys of the present age are

stunting in children's minds some qualities well worth cherishing, and introducing in their stead unchildish feelings and tastes. The beautiful toys that crowd the best shops of our great cities have in many cases too much of the glitter of money behind their beauty. Their free use, and their swift advance to a greater completeness and luxury, are calculated to make Ernest and Edith less childlike than Jack and Jill—less childlike, because possessing in a far less degree three of the grand prerogatives of children—their glorious imagination, their power of being easily made happy, and their winning and enviable simplicity.

UP THE RIVER WITH A LUNATIC.

ALF DIXON, Tom Giffard, and I had gone up the river camping out; we had done our second day's work. It was early morning on the third day, glorious weather. I was in the boat, getting the steering-lines in order; Giffard and Dixon were on the bank, talking to Dr Rawle. As I understood it, the Doctor was at the head of a private asylum for lunatics. He was Giffard's friend, not mine. He had been taking a constitutional when he happened to fall in with us just as we were sitting down to our open-air breakfast; the chance meeting led to Giffard inviting him to share our gipsy meal. He did.

He was a pleasant fellow, not too old and not too young. I liked him exceedingly. We talked of things in general and of lunatics in particular. Something led to his mentioning—I think it was speaking of the cunning of a certain class of lunatics, and the difficulty of keeping them within four walls—the fact that one of his inmates had escaped a day or two previously, and had not yet been retaken. This was the more singular, as it was tolerably certain he had not gone far, and search had been made for him in every direction.

As Giffard and Dixon were saying good-bye, preparatory to getting into the boat, the Doctor laughingly said: 'Should you happen to come across him, I shall consider you bound to bring him back safe and sound. He's a man of forty-four or five, tall and bony, iron-gray hair, and has a curious habit of shewing his teeth and winking his left eye. Don't look out for a raving lunatic; for on most points he's as right as you and I. He's wrong in two things. Whatever you do, don't let him lose his temper; for whenever he does, though ever so slightly, he invariably goes in for murder—he's all but done for two keepers already. And don't talk to him of England or Englishmen; for if he should get upon his native land, he'll favour you with some observations which will make you open your eyes.'

We laughed. Alf and Tom shook hands with him, and got into the boat. We promised, if we should happen to meet him, we would certainly see him returned to safe custody. Alf stood up and shoved us from the shore; we sang out a last good-bye, and left the Doctor standing on the bank.

It was a beautiful morning. The river was delicious, clear as crystal; we could see the bottom, and every stone and pebble on it; just a gentle breeze, fanning the surface of the waters into a little ripple. We lit our pipes and took it easily.

I am a good bit of traveller, know many lovely nooks and crannies in foreign lands; I have lived abroad as much as at home; but I will match the higher reaches of our own Father Thames for beauty and for charm against any scenery in Europe. And on an early summer morning, after a spell of glorious weather, it is in all its prime; the water so cool, so clear; the banks so green, so charming; the stately trees on either side; the mansions seen over the meadows, or peeping out among the trees. You may choose your Rhine, your Garda, or your Maggiore, or your golden Bay of Naples, but leave Cookham and old Father Thames to me.

Presumably, we had come for river beauties and the camping-out; presumably; but as a matter of fact there was a young lady lived not so far ahead, a mutual friend, Lilian Travers. Separately and jointly we had a high opinion of Miss Travers, not only of her beauty, but of other things as well; and having come so far, we hoped we should not have to return until at least we had had a peep at her. Unfortunately, though we knew Miss Travers, we had no acquaintance with Mister—there was no Missis. We had met the young lady at several dances and such-like; but on each occasion she was under the chaperonage of old Mrs Mackenzie. Apparently Mr Travers was not a party-man. But Lilian had promised to introduce us to him whenever she got a chance, and we were not unhopeful she would get that chance now. So you see that little excursion riverwards had more in it than met the eye.

We went lazily on, just dipping the oars in and out; smoking, watching the smoke circling through the clear air. All thoughts of the Doctor and his parting words had gone from our minds; we talked little, and that little was of Lilian and the chances of our meeting. We had gone some two or three hundred yards; we were close to the shore; Alf could almost reach it by stretching out his oar. We were dreaming and lazing, when suddenly some one stepped out from among the trees. He was close to us—not a dozen feet away.

He was a tall man, rather over than under six feet. He was dressed in a dark brown suit of Oxford mixture; he had a stick in his hand, wore a billy-cock hat, and his coat was buttoned right up to his throat. He had light whiskers, a heavy drooping moustache, hair unusually long, iron-gray in colour. He might be a soldier retired from his profession, or an artist out painting; he certainly looked a gentleman.

We were passing on, when he raised his stick, and shouted out: 'Stop!'

It was a regular shout, as though we were half a mile from him. We stopped, although it was an unusual method of calling attention.

'Gentlemen,' he said, still at the top of his voice, 'I should be obliged if you could give me a seat. I have a long way to go, and I am tired.'

We looked at him and at each other. It was a free-and-easy style of asking a favour; but he seemed a gentleman, and an elderly one too. Common politeness dictated civility.

'I am afraid,' said Alf, 'we have hardly room; she's only built for three.'

'Oh, that doesn't matter,' he said; 'you can put me anywhere, or I'll take an oar for one of you.'

I was on the point of advising a point-blank refusal, not appreciating his off-hand manner; but Alf thought differently.

'All right,' said he; 'we don't mind, if you don't.—Steer her in, Jack.'

I steered her in. No sooner were we near the shore, than quite unexpectedly he stepped almost on my toes, rocking the boat from side to side.

'Hang it!' I said; 'take care, or you'll have us over.'

'What if I do?' he returned. 'It'll only be a swim; and who minds a swim in weather like this?'

We stared at him; the coolness, not to say impertinence of the remark, was amazing. Begging a seat in our boat, knowing it was full, and then telling us he didn't care if he spilt us into the river! He seated himself by me, setting the boat see-sawing again, crushing me into a corner; and without asking with your leave or by your leave, took the steering-lines from my hands, and slipped them over his shoulders.

'Excuse me,' I said, making a snatch at them; 'but if you'll allow me.'

'Not at all,' he said; 'I always like something to do, and I expect you've had enough of it.'

His coolness was amusing; he was impenetrable. I know I for one regretted we were such mules as to have had anything to do with him. We waited in silence a second or two.

'Come,' he said, 'when are you going to start?'

'Perhaps,' said Alf, a bit nettled, 'as you're in our boat a self-invited guest, you'll let us choose our own time.'

The stranger said nothing; he sat stolid and silent. Tom and Alf set off rowing; the stranger steered right across the stream.

'Where are you going?' said Alf. 'Keep us in.'

'I'm going into the shade; the sun's too strong.'

He had the lines; we could hardly insist on his keeping one side if he preferred the other; he took us right to the opposite bank, under the shadow of the willow-trees. For some minutes neither of us spoke. With him cramming me on my seat and ramming his elbows into my side, my position was not pleasant. At last I let him know it.

'I don't know if you are aware you are occupying all my seat.'

He turned on me short and sharp. All at once I noticed his left eye going up and down like a blinking owl; his mouth was wide open, disclosing as ugly a set of teeth as I should care to see. Like a flash, Dr Rawle's words crossed my mind: tall, strong, about forty-five, iron-gray hair; a habit of shewing his teeth and winking his left eye. Gracious powers! was it possible we had a lunatic with us unawares? I know the possibility, nay the probability of such a thing made me feel more than queer. If there is anything in the world I instinctively fear, it is mad persons. I know little of them, have never been in their company. Possibly my ignorance explains my dread; but the idea of sitting in the same boat and on the same seat with a man who—

Dr Rawle's warning: 'Don't let him lose his temper, or murder will ensue,' made me bound from my seat like Jack-in-the-box. The boat tipped

right out of the water, but I didn't care. The man was glaring at me with cruel eyes, my muscles were strung, my fists clenched; every moment I expected him at my throat.

'What the dickens are you up to?' said Alf. 'What's the matter with you?'

'Excitable temperament, hot-blooded youth!' said the stranger.

I could have said something had I chosen, but I preferred discretion; I didn't like his eyes.

'N-o—nothing,' I said. 'I think I'll sit in the bow.' I didn't wait to learn if any one had an objection, but swinging round, I scrambled past Alf, and tripped full length on to Tom's knees. The boat went up and down like a swing; it was a miracle he wasn't over.

'Is the fellow mad?' roared Alf.

At the word 'mad' the stranger rose up straight as a post. 'Mad!' he said; 'do you know, sir'—He checked himself and sat down. 'Pooh! he's only a boy.'

In passing Tom, I whispered in his ear. 'The lunatic,' I said.

'What!' said Tom right out loud.

'Hold your row, you confounded donkey! It's the man from Dr Rawle's!'

'The'—

He was going to say something naughty—I know he was; but he stopped short, and stared at him with all his eyes. Either Alf overheard me, or else the same idea occurred to him at the same moment, for he stopped dead in the middle of a stroke, and inspected the man on the steering-seat. Tom and Alf went on staring at him for a minute or more. I kept my head turned the other way to avoid his eyes. All at once I felt the boat give a great throb. I turned: there was the stranger leaning half out of his seat, looking at Alf in a way I shouldn't have cared to have had him look at me.

'What's the meaning of this insolence?' he said.

The question was not unwarranted; it could not have been pleasant to have been stared at as Alf and Tom were staring then.

'I beg your pardon,' said Alf, cool as a cucumber. 'To what insolence do you refer?'

Tom actually chuckled; I couldn't have chuckled for a good deal; it seemed to me not only impudent but risky; I couldn't forget Dr Rawle's words about his homicidal tendencies. He turned red as a lobster; I never saw such an expression come over a man's face before—perfectly demoniacal. To my surprise, he sat down and spoke as calmly and deliberately as possible.

'Thank you,' he said; 'I shall not forget this.'

There was a sound about his 'I shall not forget this,' I did not relish. Alf said nothing. Tom and he set off rowing as coolly as though nothing had happened. I extemporised a seat in the bow, and tried to make things as comfortable as possible.

I noticed, although Alf and Tom were so cool, they hardly took their eyes off him for more than a second at a time. His behaviour before their furtive glances was peculiar; he saw he was being watched; he couldn't sit still; he looked first at one bank, then at the other; his eyes travelled everywhere, resting nowhere; his hands fidgeted and trembled; he seemed all of a quiver. I expected him to break into a paroxysm every

second. If I hadn't called out, he would have run us right into the shore; when I called, he clutched the other string violently, jerking the boat almost round. I heartily wished him at Jericho before he had come near us.

No one spoke. We went slowly along, watching each other. At last he said something.

'I—I will get out,' he said, in an odd nervous way.

'With pleasure,' said Alf; 'in a minute.'

'Why not now? Why not now sir?' he said, seeming to shake from head to foot.

'Where are you going to get?—into the river?' I admired Alf's coolness, I envied him. I only hoped he wouldn't let it carry him too far.

The man glowered at him; for a moment he looked him full in the face. I never saw a look in a man's eyes like that in his. Alf returned him look for look. Slightly, almost imperceptibly, he quickened his stroke. A little lower down was a little hamlet with a well-known inn and a capital landing-stage. When we came alongside, the stranger said: 'This will do; I'll get out here.'

He turned the boat inshore. No sooner were we near enough, than he rose in his seat and sprang on to the beach. There were several people about, watermen and others. Alf was after him in an instant; he rose almost simultaneously and leapt on shore; he touched him on the shoulder.

'Now, come,' he said, 'don't be foolish; we know all about it.'

The other turned on him like a flash of lightning. 'What do you mean?'

But Tom was too quick for him; he was on the other side, and took his arm. 'Come,' he said, 'don't let's have a row.'

The stranger raised himself to his full height, and shook off Tom with ease. He then hit out right and left in splendid style. Tom and Alf went down like ninepins. But my blood was up. I scrambled on shore and ran into him, dodged his blows, and closed. I am pretty strong. He was old enough to be my father; but I found I had met my match, and more. I was like a baby in his arms; he lifted me clean off my feet, and threw me straight into the river. It was a splendid exhibition of strength.

Tom and Alf finding their feet, made for him together; and scrambling out as best I could, I followed suit. You never saw such a set-out. We clung to him like leeches. The language he used was awful; his strength magnificent; though we were three to one, he was a match for all of us. Of course the by-standers seeing a row, came up; they interfered, and pulled us off.

'Here's a pretty go!' said one. 'What's all this?'

'Stop him! lay hold of him!' said Alf; 'he's a lunatic!'

'A what?' said the man.

'He's a lunatic, escaped from Dr Rawle's asylum!'

Instead of lending a hand, the man went off into a roar of laughter, and the others joined. The stranger looked literally frantic with rage. A gentleman stepped out from the crowd. 'There's some mistake,' he said; 'this gentleman is Mr Travers of Tollhurst Hall.'

You could have knocked us all three down with a feather, I do believe. Could it be possible? Could we have been such consummate

idiots as to have mistaken a sane man for a lunatic? and that man Lilian Travers' father! I could have shrunk into my boots, I could have run away and hid myself in bed. To think that we should have dogged, and watched, and insulted, and assaulted the man of all others in whose good books we wished to stand—Lilian Travers' father! Never did three men look such 'fools as we did then. We were so confoundedly in earnest about it, that was the worst of all. I don't care what you say; you may think it a first-rate joke; but he *must* have been an eccentric sort of elderly gentleman. If he had behaved sensibly, if he had made one sensible remark, he would have blown our delusion to the winds.

We tendered our apologies as best we could to the man we had so insulted; but he treated us and them with loftiest scorn; and we got one after another into the boat amidst the gibes and jeers of an unsympathetic crowd. And as we rowed from the wretched place as fast as our oars would take us, we each of us in our secret heart declared we never should forget our adventure up the river with a lunatic. And we haven't. From that day to this, I have never seen Lilian Travers, nor do I wish to.

A SUMMER REQUIEM.

SPIRIT of Summer! thou whose honeyed sweets
Ne'er fail fulfilment of their promise fair;
Thou at whose smile Earth's odorous voices rise,
To fill with balmy breath the gladdened air;
Where are thy songs, thy melodies, thy lays,
That cheered our weary hearts, and soothed our pain?

Silent thy music now, thy songsters fled,
And nothing but their memories remain;
Faded thy blossoms, all thy buds decayed,
While hollow winds moan sadly through thy bowers.

Yet though thy smiling gardens bloom no more,
We'll not forget the perfume of thy flowers.
Gone are thy cloudless days; thy happy skies
Are dim and tearful now 'neath Winter's frown;
Disrobed thy trees, as the last dying leaves
From naked boughs come slowly fluttering down.

How sad to wander through thy sodden woods,
Gray with a brooding mist, damp with decay,
Where Summer's leaves lie rotting at our feet,
Or by the chilly blast are borne away.

Now faint the scent of dead and dying plants;
Now clings the fungus to the humid stone,
And croaks the frog from yonder weedy marsh,
For all the woodland happiness is gone.

If on the blackened stems some wintry ray
Athwart should fall and linger there awhile,
'Twould be but as the echo of a song,
The shadow of a once familiar smile.

Our brightest joys are ever quickest fled,
As fade the rainbow colours in the sky;
We do not prize our happiness enough;
We scarcely feel it as it passes by.

Through looking always for some joy unknown,
To-day must ever incomplete remain,
And not till past, we know how sweet it was.
Spirit of Summer, visit us again!

JUDGE BATHGATE'S EXPERIENCES OF NEW ZEALAND.

FIRST ARTICLE.

WHEN, thirty years ago, we began to reside during the summer months on the banks of the Tweed, we were fortunate in having for acquaintance, in the neighbouring town of Peebles, a gentleman of agreeable manners, singular sagacity, versatility of talent, great earnestness of purpose, and withal a keen sense of humour and love of anecdote. This was Mr John Bathgate. Professionally a solicitor and banker, he occupied the responsible position of Procurator Fiscal for Peeblesshire. Mr Bathgate was one of those rare individuals who are able at once to 'see the idea.' At the slightest hint he saw the bearings of a case, which others failed to comprehend. Desirous to promote improvements of all sorts, he took a lead in establishing a railway between Peebles and Edinburgh, which in spite of dolorous prognostications, has proved a marvellous success; for besides being an eight per cent. line in perpetuity, it has largely increased the prosperity of the district. He had 'seen the idea,' which a number of people who affected to be very wise could not see at all. Useful in forwarding every good work, and never grudging trouble, a pang came over the neighbourhood when he announced his intention of emigrating with his family to New Zealand. 'What could he mean? He was much esteemed, had an excellent business, and got through his varied duties without difficulty.' We happen to know why he contemplated taking this extreme step. One of his reasons was that his numerous family were growing up, and the settling of them in life might become a source of perplexity. But a more serious reason consisted in an alarming bronchial affection, and he felt that if he tried to encounter a repetition of winters in Great Britain, his doom would speedily be the churchyard. For safety, a warmer and more equable climate was necessary. Moved by these considerations, Mr Bathgate gave up all

his appointments, disposed of his property, and honoured with testimonials of public respect and remembrance, shipped himself off with his wife and family to New Zealand.

This was in 1863, at which time, as a British colony, New Zealand was still in its infancy. We, in fact, remember the commencement of it in 1840, under the auspices of the New Zealand Association, of which Edward Gibbon Wakefield was the moving spirit. Wakefield's notion was to found settlements of a temptingly denominational character. One, to be called Canterbury, with Christchurch as its capital, was to be specially a home for members of the Church of England. Another, designated Otago, with New Edinburgh as its capital, was to be set aside for Scottish Presbyterians. Possibly, the scheme was of service at the outset in attracting settlers. A prospectus having fallen into our hands, we felt an objection to the name New Edinburgh. Indeed, we dislike all names of places with the word 'New,' such as New York, New Orleans, and so on. The term New Zealand, which like others of its kind shews weakness of invention, is particularly senseless and objectionable. With this opinion, we suggested in a letter to the Editor of a New Zealand journal, published in London, that for the name New Edinburgh might advantageously be substituted the term Dunedin, which is the Celtic name for Edinburgh. The suggestion was embraced by the New Zealand Association, and hence Dunedin became the accepted name for the capital of the province of Otago. Dunedin, to which, from the incident mentioned, we entertain somewhat the feelings of a godfather, was the port to which our friend Mr Bathgate was bound; and after some professional changes, he has been appointed a judge in this part of the colony.

As for New Zealand generally, the denominational characteristics have long since vanished, and so have the separate provincial jurisdictions. The whole colony is under a central government at Wellington; the country at large possessing free county and burghal administrations. The law of

England, with some modifications, is universally established, and is well administered by judges and magistrates in various quarters. There is no Church established by statute; but there is a profusion of self-supporting churches of different denominations, and all exist in harmony with each other. There is a system of elementary and secondary education under the direction of an Education Department, as effective and successful as that in the United Kingdom.

Sixteen years have elapsed since our friend voyaged fourteen thousand miles across the ocean in search of a new home. Once more, to general delight, he visits his old haunts on the Tweed, being absent on leave for a year, and desigus to deliver some popular lectures on New Zealand as a field for emigration. Of his private affairs we say nothing, further than that with children and grandchildren his surroundings are quite patriarchal. The real interest in his reappearance consists in our procuring thoroughly trustworthy information concerning the country of his adoption, now eagerly inquired after by persons who think of bettering their circumstances by emigration. On this topic we propose to offer the following particulars, gathered from conversations with Judge Bathgate, and from a perusal of his lectures on the subject.*

Situated in the southern Pacific, the New Zealand islands, three in number, enjoy a remarkably fine and salubrious climate, without extremes of heat or cold. While Canada is under snow for several months in the year, and parts of Australia are scorched with droughts and hot winds, New Zealand is green, fertile, and beautiful all the year round, with but a small difference in temperature between summer and winter. The circumstance that few places in New Zealand are more than a hundred miles from the sea, must also be beneficial. Some parts of the coast are indented with picturesque sounds or fiords, such as are seen in Norway and the west coast of Scotland. There are ranges of lofty mountains, from which flow refreshing rivers, that are sometimes in high flood, but never run dry. Much of the unimproved land is covered with natural fern, which is a good indication of a capacity to produce heavy grain crops. When reached by the early settlers, thirty-nine years ago, New Zealand was inhabited by scattered tribes of Maoris, with whom there was some trouble; but by judicious arrangements there are no longer dissensions on this score. The entire number of colonists is now four hundred and fourteen thousand four hundred and twelve, against forty-five thousand Maoris, and these are chiefly in the Northern Island, there being only nineteen hundred widely scattered in the Middle Island. Since the imperial government withdrew the troops ten years ago, the people of New Zealand

have been taught self-reliance, and are now able to defend themselves and keep the peace by means of a volunteer force and body of armed constabulary. The true peace-makers, however, are roads, railways, and the spread of civilised usages.

'No one,' says Mr Bathgate, 'who thinks of New Zealand either as a field for investment or for settlement ought to look upon the Maori element as deserving the least consideration, further than this, that the land which could produce and maintain so noble and handsome a race as the Maoris undoubtedly are, must be admirably adapted for the support of a population having capital and skill to turn its resources to satisfactory account. I have often seen at Government House elegantly dressed Maori belles going through the figures of a set of quadrilles with as much grace and appreciation as their fairer *vis-à-vis*. The dusky matrons, wives of chiefs, richly and fashionably dressed, but with tattooed lips, would cluster round their lithe and handsome daughters, and view their performance with intense and admiring interest. One of these girls was nicknamed Grace Darling, from her having on one occasion swum out to a wreck and rescued two men. Many of the Maoris have let their lands, live in affluence, some of them keeping their carriages. A silent change is going on, which will gradually assimilate both races and habits of thought. In the meantime old tastes will occasionally crop up. A chief being strongly urged to drain a shallow lake on his land, asked the reason why. He was told that the land would keep so many sheep if improved. "Who," he replied, "would care for mutton when they could get eels?"

Wellington, the seat of government, is situated on a point of land at the south extremity of the North Island, near a strait of five-and-twenty miles wide, which divides it from the Middle Island. In the North Island are extensive settlements, with good-sized towns, one of these being Auckland, which has attained considerable commercial importance. On the east side of this Northern Island are some wide-sweeping bays, the Bay of Plenty and Hawke's Bay being perhaps best known. A resident in this quarter, the Rev. J. Berry, says of the climate: 'In my own garden in Napier, Hawke's Bay, my geraniums, fuchsias, heliotropes, &c. flowered the whole of the winter in the open air, and from my fig-trees I gathered two heavy fully ripened crops in one year. An English farmer finds it difficult to realise how little is needed to farm in such a climate. Horses, sheep, and cattle live in the open air all the year round in five-sixths of New Zealand.' Christchurch is situated on the east side of the Middle Island; and further on lies Otago, with its harbour, called Port Chalmers, leading to Dunedin, in the forty-fifth degree of south latitude—an exceedingly good latitude to live in; for it is ten degrees nearer the equator than Edinburgh, and is as joyous as the more pleasant parts of France.

Mr Bathgate, who finally dropped down on this agreeable latitude, and has travelled about all round for a few hundred miles, is in raptures with the climate of part of Otago, even although it does

* The Lectures are preparing for delivery in different places, and will thereafter be published. Judge Bathgate's present address is 'Peebles.'

not grow figs and oranges like that of Hawke's Bay. Here is what he says: 'A hundred years ago Captain Cook observed that when he put into one of the sounds of the Middle Island to refit, almost the entire crew were affected with scurvy. In fourteen days they were all restored to health. As regards personal experience; when in the old country a winter never elapsed without a touch of bronchitis, or as it was called taking a bad cold. During sixteen years' residence in the colony, I have enjoyed excellent health. For the last six years while occupying my present judicial position, with a large amount of hard work—there being on an average three thousand five hundred civil cases disposed of yearly, many of those most important and intricate—I have never been a day absent from illness. The same good health has prevailed in my large family, eleven of them residing with me, or settled in the neighbourhood. I am therefore fully justified in expressing my confident belief that New Zealand is one of the healthiest countries known. Travellers from the adjoining colonies, where the same high conditions in regard to health do not exist, are invariably struck with the ruddy complexions and vigorous healthful look of the children in Dunedin. It is so observable, that in a family where the elder members are born in Victoria, a marked difference in favour of the children born in Dunedin can be observed. The healthful character of the New Zealand climate is partly owing to the clear elastic atmosphere, the evaporative power and the rainfall being nicely balanced; to an absence of extremes of either heat or cold; to an abundance of running water, without pestilential swamps; and to the cool refreshing nights even in the height of summer.'

In conversing with Judge Bathgate, he mentions the curious fact, that, arising from the buoyancy and mildness of the climate, the children born in New Zealand do not seem to shew the craving for stimulants that is apt to be demonstrated in the northern countries of Europe. Among them, generally, he says, there is a marked absence of a taste for alcoholic liquors. They do not need artificial exhilaration. He has seen large numbers of these New Zealand youths collected on festive occasions, and they never thought of the indulgences that with us form part of the common routine. The idea is suggested that the appetite for intoxicating drinks in the old country may be as much due to the depressing nature of the climate as to mischievous social influences. At any rate, there is a satisfaction in knowing that with exceptions arising from special causes, there is now growing up a robust English race at the antipodes free from the degrading vices that are a constant and increasing reproach to our community.

In his lectures, Judge Bathgate states that in New Zealand there is the same healthy conditions in animal life. He says: 'Among sheep, diseases are almost unknown. Horses, cattle, poultry, all thrive amazingly. Imported birds and quadrupeds increase at an unprecedented rate. Starlings, introduced only a few years ago, are now found very numerous. Hares and game-birds are abundant. Rabbits have multiplied on some runs so as to be a pest; but the owners have in several instances subdivided their estates into small farms and sold them to settlers, by whom the

rabbits are easily and freely extirpated. Combined with the healthiness of animals deemed valuable by the agriculturist, there is a total absence of noxious wild beasts and reptiles. Surveyors and early settlers could encounter tent-life for months with impunity. New Zealand maintains the same pre-eminence in other branches of vital statistics. It stands first in order among the Australian colonies, and much before the United Kingdom, in birth-rate. The excess of births over deaths is higher than in any of the Australian colonies.'

Such is the general prosperity of New Zealand, that already among the Australasian colonies, it stands third in point of production. It annually exports wool to the value of about four million pounds; the principal export of the article being to London. Of gold, its exports in 1877 amounted to £1,476,312. Of agricultural products, principally wheat and oats, its exports reached the sum of £443,721. The export of wheat is largely on the increase. 'The climate in South Canterbury and the adjoining part of Otago is proved to be specially adapted for the growth of cereals. A crop of sixty bushels of wheat to the acre is not uncommon. Ninety bushels of oats to the acre have been reaped. The average is about thirty-two bushels per annum, which average production is double that of New South Wales and Victoria, and three times that of South Australia. In point of return, it is far before European countries, excepting Denmark and Holland, which are almost equal. The nearness to the sea, and the excess in fertility compared with other grain-producing countries, do far more than compensate for the distance of the colony from the English market. Wheat grown in New Zealand ten miles from a harbour, can be placed in London at an average freight of a shilling and eightpence a bushel. With wheat as low in price in London as forty-five shillings per quarter, the New Zealand grower would receive a return of six pounds per acre, which after deducting three pounds as the expense of cultivation, would leave a clear profit of three pounds per acre. These favourable circumstances will enable the New Zealand farmer to compete advantageously with the growers of Europe, Egypt, and the American continent.'

In different parts of New Zealand there have sprung up large and successful manufactories. One timber and woodware factory employs seven hundred hands. This species of manufacture is facilitated by the most improved American machinery. Doors and window-sashes, as well as expensive furniture, are rapidly becoming articles of export. An agricultural implement manufactory in Dunedin made and sold last year eleven hundred double-furrow ploughs, three hundred and fifty reaping-machines, two hundred and eighty farm-drays, besides harrows, rollers, and a host of small articles. The establishment employs one hundred and seventy-five hands, mostly at high wages. The reason why double-furrow ploughs are used is because the soil is so easily turned over that a plough can execute two furrows at once. Carriages are now produced in Dunedin of as elegant workmanship and finish as anything in Longacre. And why not? English artisans have carried their skill to the other end of the world. At a woollen factory set up ten miles from Dunedin, first-class tweeds, blankets, shawls, and hosiery are produced. A hundred and fifty hands are employed;

the wages of girls and young men ranging from ten to thirty shillings a week, boys from ten to fifteen shillings, and men from thirty-six shillings to seventy shillings. A capital of seventy thousand pounds is invested, yielding a profit of ten per cent. The demand for goods is larger than the supply. In the iron-trade there are flourishing concerns, producing the machinery of flour-mills, flax-mills, oatmeal mills, paper-mills, land and marine steam-engines, bridges, and so forth. Besides miscellaneous manufactories, there are now twelve printing-offices in Dunedin, which employ over three hundred hands. There is a large army of newspaper runners, by whom the daily journals are delivered from door to door.

New Zealand abounds in mineral wealth. Besides gold, almost every variety of iron ore has been discovered, and only needs to be dug and worked to advantage. The colony may be said to be one vast coal-field. In seven collieries in the neighbourhood of Dunedin, about two hundred and fifty men are employed, putting out upwards of fifty thousand tons annually, which sells in town at thirteen shillings a ton. This industry is extending rapidly. In the abundance of coal and iron alone, there lie the elements of prodigious prosperity. Eleven hundred miles of railway have been opened in the colony. All the lines are of three feet six inches gauge, which is exceedingly suitable for a young country. Carriages for the lines are now built in the colony. The locomotives are imported from the United States, American makers, as it seems, being more flexible in meeting orders of a special kind than English manufacturers.

Whatever be the inducements held out for manufacturing and commercial industry in New Zealand, they are greatly exceeded by enterprise in the acquisition of land and in agricultural pursuits. On this account, Judge Bathgate addresses himself principally to capitalists and farmers. He points out that there is no idle class in the colony. All are actively employed in some kind of useful industry. We postpone to a second article the arrangements respecting the purchase and working of lands, and meanwhile only say that by exercising prudence in acquiring lands by ready-money payments, or by postponed annual payments over a space of ten years, a young agriculturist will be able to set himself up as a proprietor of freehold estate at an outlay equivalent to the capital required for stocking and working a farm in the old country, for which he would have to pay an annual rent, and find himself as landless at the end of his lease as at the beginning. Some large land-holders are willing to sell farms on postponed terms, extending up to twenty-five years. New Zealand, therefore, is peculiarly adapted as a home for those who wish to farm their own lands. No doubt, labour is dearer in New Zealand than in England or Scotland; but this dearness is not felt, because there is no rent to pay, rates and taxes are trifling, less labour is necessary on account of the mildness of winter, horses are maintained at a small expense, and for a time at least, there need be comparatively little outlay for restoratives to the lands under culture.

In reflecting on these advantages, one is startled with the conviction that Great Britain, with its rent charges, its heavy taxes and rates, and its sadly deteriorating climate, which now can scarcely

be said to comprehend any regular summer, has no chance against New Zealand, where the farmer is a gentleman, owning the land he occupies. Let it be understood, however, that the balance in favour of this flourishing colony cannot continue long as it is. The lands are getting speedily settled, and must inevitably rise to a value which will be beyond the means of small capitalists. Those who wish to transfer themselves to this new field of enterprise have no time to lose. Following the example of Judge Bathgate, the sooner they are off the better. W. C.

THE BRAVE SWISS BOY.

A TALE FOR THE YOUNG (CONCLUDED).

CHAPTER VII.—THE REWARD OF FIDELITY.

WALTER met with a friendly reception from General De Bougy, a brave old warrior who had served under Napoleon, and fought at Waterloo, where he had been severely wounded, and had lost his right foot by a cannon-ball. His hair was gray, and his countenance weather-beaten; but in spite of his age and infirmities, he enjoyed tolerably good health, and was always in good-humour. Having from long experience become a keen observer of those around him, it was not long before he recognised the merits of his new servant, to whom he soon became as much attached as his nephew had been.

Walter had been about three months in the General's service, and it seemed to all appearance as if he was likely to become a permanency there, when a letter arrived from Paris, the reading of which suddenly changed the customary gaiety of the old man into the deepest gloom.

'This is a sad affair,' said he to Walter, who happened to be in the room at the time. 'My poor nephew!'

'Mr Lafond? What is the matter with him?' inquired Walter earnestly.

'He is ill, dangerously ill, poor fellow, so the doctor informs me,' replied the General. 'You can read the letter yourself. He seems to complain of being surrounded by strangers, with no one in the house that he can rely on. If I were not such an old cripple, I would go and help him to the best of my ability; for although he has led a thoughtless, reckless life, a more thorough-hearted gentleman does not live. Poor Adolphe!'

'I must go to him sir,' said Walter suddenly, after hastily reading the letter, the perusal of which had driven all the colour from his cheeks.

'You! Why, it is not long since you left him; and what do you want to go back for?' inquired the General in surprise.

'Can you not guess sir? I must go and nurse him. He must at least have one person near him to pay him some attention.'

'If you care for him so,' exclaimed the General, 'why did you leave his service?'

This led Walter to explain to the old gentleman the reasons which had compelled him to give up his situation, and again to beg permission to act the part of nurse to his former master. A tear sparkled in the old man's eye as the youth declared the attachment he had always cherished for Mr Lafond. 'Go to him then,' said he. 'I cannot trust him to a more faithful attendant; and as soon as I can, I will follow you, and

take my place with you by his bedside. Poor Adolphe! Had he only possessed firmness of character and avoided bad company, he might have been well and strong to-day. But his unhappy weakness has brought him to the grave before his time, in spite of all my warnings and entreaties. As he has sowed, so must he reap. Ah! Walter, his fate is a terrible proof of the consequences of evil habits. But all regrets are useless now. Let us lose no time in giving him what little help we can.'

Making all the necessary preparations for the journey without a moment's delay, Walter soon reached Paris. When he entered the chamber of Mr Lafond, he was shocked at the change which a few short months had made in his appearance. It was evident that the doctor had rather disguised than exaggerated the danger he was in. The sunken eyes and withered face shewed only too plainly that the space of time allotted to him on earth was but short. Walter sank on his knees by the bedside, and taking the pale and wasted hand in his, breathed a prayer that God might see fit to deal mercifully with a life yet so young; while the invalid smiled faintly and stroked the cheek of his faithful attendant.

'Dear Walter, how good of you to come back,' murmured the invalid. 'I thought you would not leave me to die alone. I feared that your prediction would prove true, and therefore I did not wish you to go home. I wanted to have a true friend with me at the last moment, which I feel cannot be far off now.'

The mountaineer was too overpowered with grief to make any reply. He tried to utter some words of hope and encouragement; but his heart sank within him, and he felt that the physician's prediction had been only too true.

'Too late!' whispered the dying man, motioning Walter to a seat. 'I am dying, because I had not the decision and resolution of character to control my evil passions. But do not let us speak any more on that subject, for my fate is settled, and cannot be altered now.'

The faithful Switzer saw that Mr Lafond too well knew the critical condition he was in to be deceived by any false hopes, and he therefore did everything in his power to make the last days of the dying man as free from pain and discomfort as possible. Who could tell what might be the effect, even at so late a period, of careful nursing and devoted attention? But all his thoughtful and loving care seemed in vain.

'The end is coming,' said the invalid one evening as the glowing rays of the evening sun streamed into his apartment. 'I shall never more look upon yonder glorious sun, or hear the gay singing of the birds. I have something to say to you, Walter, before I go. Do you see that black cabinet in the corner? I bequeath it to you with everything it contains, and hope with all my heart that it will help you on in the world as you deserve. Here is the key of my desk, in which you will find my will, which confirms you in the possession of the cabinet and all its contents. And now, give me your hand, dear boy. Let me look once more upon your honest face. May heaven bless you for all your kindness and devotion! Farewell!'

Walter bent over the face of the dying man and looked at him with deep emotion. He smiled

and closed his eyes; but after lying in a quiet slumber for about an hour, he awoke with a spasm; his head fell back, and the hapless victim died in the arms of his faithful servant.

The long hours of the night were passed by Walter in weeping and prayer beside the corpse of the master to whose kindness he had owed so much; but when morning dawned, he roused himself from his grief, and gave the directions that were necessary under the melancholy circumstances. It was a great relief to him that General De Bougy arrived towards evening to pay the last honours to his deceased nephew. Two days afterwards the funeral took place; and as the mortal remains were deposited in the family grave, Walter's tears flowed afresh as he thought of the many proofs of friendship he had received from his departed master.

A day or two afterwards he was awakened from his sorrow by news from home. The letter was from neighbour Frieshardt, who again thanked him for the money he had received for the sale of the cattle, praised him for the faithfulness and ability with which he had managed the business; and then went on to speak of Walter's father. 'The old man,' he wrote, 'is in good health, but he feels lonely, and longs for you to come back. "If Watty only were here, I should feel quite young again," he has said to me a hundred times. He sends you his love; and Seppi, who is still with me, and is now a faithful servant, does the same. So good-bye, Walter. I think you now know what you had better do.'

'Yes; there's no doubt about that,' said Walter, after he had with considerable trouble got to the end of the letter. 'I must go back to my mountain home, and keep my poor old father company. There is nothing more to keep me here.'

Without further delay he hastened to the General, shewed him the letter, and told him he had decided to leave Paris and return home.

'Nonsense, Walter!' growled the old gentleman. 'Am I to lose you as well as my nephew, the only relative I had in the world? I won't hear a word of it.'

But the thought of his father's lonely and helpless situation had made such a deep impression on Walter's heart and stirred up such a home-sickness, that he held to his resolution. 'My old father wants me back sir,' said he, 'and you must allow me to go.'

The General used all his powers of persuasion; promised to regard the young mountaineer as his own son; but it was all of no use. Walter spoke so earnestly of his father's solitary home, and the desire he felt to see his native mountains once more, that the old gentleman had to reconcile himself to parting with him. 'Go home then,' said he. 'When the voice of Duty calls, it is sinful to resist. But before you go, we must open my nephew's will. It will surprise me very much if there is nothing in it of importance to you.' Unlocking the desk, the will was found sealed up as it had been left by Mr Lafond. After opening it, the General read the document carefully through, and laid it down on the table with an expression of disappointment. 'Poor fellow!' he exclaimed. 'Death must have surprised him too suddenly, Walter, or he would certainly have left you a larger legacy. This is all he says about you: "To Walter Hirzel, my faithful and devoted servant,

I bequeath the black cabinet in my bedroom with all its contents, and thank him sincerely for all his attention to me." That is the whole of it. But never mind, my young friend; the old General is still alive, and he will make good all that his nephew has forgotten.'

Walter shook his head. 'Thanks a thousand times dear sir, but indeed I wish for nothing. My feet will carry me to my native valley; and once I am there, I can easily earn my living. I daresay there will be some little keepsake in the cabinet that I can take in memory of my poor master, and I want nothing more.'

'Then search the cabinet at once. Where is the key?'

'Here,' said Walter, taking it from his pocket. 'Mr Lafond gave me the cabinet shortly before his death, and handed me the key at the same time.'

'And have you never thought of opening it to see what it contained?'

'No,' replied Walter. 'It did not occur to me to do so. But I will go and see now.' With these words he left the room, and went up to the apartment where the piece of furniture stood. In the various drawers were found the watch, rings, and jewellery his master had been accustomed to wear. As he viewed these tokens of regard, his eyes were bedewed with melancholy gratitude. Carefully placing the jewellery in a little box, he was about to close the cabinet again, when his eye fell upon a drawer which he had omitted to open. Here, to his infinite surprise, he found a packet with the inscription in his late master's handwriting, 'THE REWARD OF FIDELITY,' which on opening, he found to contain bank-notes for one hundred thousand francs!

'Well, what have you found?' inquired the General eagerly, when the half-bewildered youth returned.

'This watch and jewellery, and a packet of bank-notes,' replied Walter, laying them on the table.

'One hundred thousand francs!' exclaimed the old gentleman. 'That is something worth having. Why, that will be a fortune to you; and I am now sorry that I did my nephew the injustice to think he had forgotten you. I wish you joy with all my heart!'

'For what do you wish me joy sir?'

'For what? For the money,' said the General in surprise.

'But that is not for me,' said the Switzer, shaking his head. 'This watch and the jewellery I will keep as long as I live, in memory of my good master; but the money must have been left there by mistake, and I should feel like a thief if I were to take any of it.'

The old General opened his eyes as wide as he could, and stared in astonishment at the simplicity of the youth. 'I'm afraid you are out of your mind,' said he. 'The will says, "the black cabinet with all its contents." The bank-notes were in it, and of course they are yours.'

'And yet, it must be a mistake.'

'But I tell you it is no mistake,' exclaimed the General impatiently. 'Look at the inscription, "The Reward of Fidelity!" To whom should that apply but to you? Put the money in your pocket, Walter, and let us have no more absurd doubts about it.'

But the young man persisted in his refusal, and

pushed the packet away from him. 'It is too much,' said he; 'I cannot think of robbing you of such a large sum.'

'Robbing me!' ejaculated the General. 'Why, the idea, my good fellow, is preposterous! You will rob no one but yourself if you refuse the windfall. I insist upon your taking the money.'

'No sir. I cannot bring myself to think of it. Mr Lafond can never have intended to give me such a large sum. It is quite impossible!'

'Well, then,' said the General, greatly touched by such singular unselfishness, 'I must settle the business. If you won't take the money, I will take you. From this day, Walter, you are my son! Come to my heart. Old as it is, it beats warmly for fidelity and honesty. Thanks to God that He has given me such a son in my lonely old age!'

Walter stood as if rooted to the spot. But the old man drew him to his breast and embraced him warmly, till both found relief for their feelings in tears.

'But my father!' stammered the young man at last. 'My father is all alone at home!'

'Oh, we will start off to him at once, bag and baggage!' exclaimed the General. 'I know your Fatherland well, and shall very soon feel myself more at home there than I am in France, where there is not a creature left to care for me. Yes, Walter, we will go to the glorious Bernese Oberland, and buy ground, and build a house, within view of your noble mountains, and live there with your father! He shall have cattle and goats to cheer his heart in his old age, and we will lead a happy life together as long as God spares us! I know you would not feel comfortable here, so let us make up our minds, and start for the mountains as soon as we can.'

Walter in his happiness could scarcely believe his ears, and thought the whole a splendid dream. But he soon found the reality. The General sold his property in France, and departed with his adopted son to Switzerland, where he carried out the intention he had so suddenly formed. Old Toni Hirzel renewed his youth when he had his son once more beside him, and he and the General soon became fast friends. A year had scarcely passed ere a beautiful house was built near Meyringen, and furnished with every comfort; while an ample garden surrounded by meadows, in which cows and oxen fed, added to the beauty of the scene. Walter's dream had become a reality; and everything around him was so much better than he had ever dared to hope, that his heart overflowed with gratitude to God, and to the benefactor who had done so much for him.

Nor was this prosperity undeserved. Walter had not spent his time in idleness and sloth. He knew that the diligent hand maketh its owner rich, and he managed the land with so much energy and skill, that he soon became renowned as one of the best farmers in the Oberland. The General and Toni assisted him with their counsel and help as far as they were able; and the old soldier soon experienced the beneficial influence of an active outdoor life and the change of air and scene. His pale cheeks grew once more ruddy with health, and he soon grew so active, that he even forgot that his right foot lay buried on the field of Waterloo.

Thus the little family lived in happiness, enjoy-

ing the good wishes of all their neighbours, and the gratitude of all who were in want; for they were always ready to relieve out of their abundance any who needed it. Mr Seymour increased their happiness by visiting his friend Walter nearly every year, and rejoiced in the prosperity which God had bestowed upon him as a reward for his honesty and uprightness.

THE END.

SUB-EDITING A LONDON NEWSPAPER.

BY A LONDON SUB-EDITOR.

NOTWITHSTANDING all that has been said and written about the inner life of our great newspaper establishments, the popular conception with regard to it is still of a very hazy and, indeed, incorrect character. The intricacy and magnitude of the work done cannot be well imagined by one who draws his conclusions from the completed broad-sheet at his breakfast-table. It is rather in what does *not*, than in what does appear, that the untold labour skill and experience brought to the compilation of a morning newspaper, can be justly estimated.

Though it is popularly supposed that the main work connected with the compilation of a morning newspaper is accomplished in the editor's room, the work is really done in that of the sub-editor, and by that important functionary and his staff, to whom we shall now introduce our readers—leaving out of account in the meanwhile, the important responsibilities of the editor-in-chief.

Imagine then a moderately sized apartment in which there are five or six writing-tables; on each table a green-globed lamp, and before each lamp a pale-faced man. The principal of the sub-editorial staff sits a little apart from the others, and to him all the letters and 'copy' (manuscript) addressed to the editor are brought. It is his duty to sort this miscellaneous heap of news and correspondence into separate bundles. Letters for the editorial department make one mound; letters relating to advertisements and business matters another; and those containing telegrams home and foreign, with the ordinary news paragraphs and 'copy' of reporters and correspondents, a third. The first two parcels are despatched, one to the editor's room, the other to the composing-room, there to be at once set into type; the third is divided among the sub-editor's assistants—the pale-faced men aforesaid.

Having premised thus much, we shall see the beginning of the practical work of the evening—the selecting and preparing of the 'copy' for next day's paper. It is seven o'clock, and all the gentlemen are at their posts. To one the chief sub-editor hands the police 'flimsy' or thin paper upon which, by means of a stylus, several copies of the same subject are simultaneously produced. This police intelligence if printed in full would, probably, occupy about six or seven columns in the next issue; but the assistant to whose task it falls has to choose from this mass of badly written, badly spelled, ill composed, and ungrammatical material, as many cases as will, when improved, modified, and animated by him, make an interesting column of news. The revelations of the London police courts are painful in the extreme; and no one can pass many months in the duty of sub-editing 'copy' of this kind

without acquiring a melancholy insight into the viciousness of human nature. Having had some years' experience of the work, the writer can safely say that the odious crimes with which Rome's declining days were marked will easily find a parallel in modern London. There are statutes in our law-books which we imagine are seldom enforced, because we seldom read of them; but the waste-paper basket of the sub-editor is the oblivion into which many of the most atrocious offences imaginable are mercifully cast. The assistant having finished his revision of the police reports, and having written two or three paragraphs out of them for the summary of news, next receives perhaps a telegram in French from the correspondent at Berlin, Vienna, Constantinople, or elsewhere. This translated, he may then be called upon to read through the 'copy' of the reporters, and make into neat paragraphs the items of news sent by the country correspondents, or to correct a telegraphed speech of Mr Gladstone or of Lord Beaconsfield.

But while this assistant is thus busily engaged, the others are not idle. News has just been received in the office that some public man has died. If he be great enough to be on the list of those whose biographies lie in the sub-editorial desk—'graveyard' this compartment is grimly called—calmly waiting the decease of their illustrious subjects, there is an end of the matter—the date and a few particulars regarding the last hours of the deceased personage are added, and the printer receives the 'copy' at once. But if he be a minor light, and yet one who must receive special notice to the extent of say a quarter or half a column, one of the assistants is called upon to compile a memoir. He forthwith furnishes himself with Vapereau's *Dictionnaire des Contemporains*, with *Men of the Time*, an *Encyclopædia*, and one or two other books of reference, and in the course of a couple of hours the compositors are at work on the biography. Just then a messenger from the Messrs Spottiswoode, government printers, arrives with a bundle of blue-books, containing perhaps official despatches, or reports upon subjects interesting to the general community. The assistant having completed his memoir, is informed through his chief, that the editor requires an abstract of a blue-book of probably four or five hundred pages, to the extent of about a column or a column and a half. The unfortunate man settles down to his task, and plods on wearily until, in the space of perhaps three hours, his work is done. Then, to vary his monotony, he is requested to look through the country papers, with a special eye, usually, to the *Scotsman*, the *Glasgow Herald*, and the *Irish Times*, to see if there be any scraps of news worth reprinting or quoting; and having finished a hasty overlook of the principal home papers he, in all likelihood, extends his survey to the American, Colonial, and French journals.

Assistant number three is meantime preparing the sporting news, which, if from the country, is telegraphed. This he arranges and, where possible, reduces in quantity; and what with horse-racing, cricket, boating, sculling, pedestrianism, and other kindred subjects, this gentleman's time is fully occupied for the evening. The fourth assistant has been all this time preparing the foreign telegrams. He will spend a quarter of an

hour in looking out on an immense atlas the name of some obscure place, the spelling of which has been rendered still obscurer by its being incorrectly telegraphed. He puzzles and racks his brains over the meaning of phrases made mysterious in their passage through a variety of continental telegraph offices with clerks of all nationalities. His skill in expanding curtly (owing to the immense cost) telegraphed news, from the other end of the globe, is in constant requisition; he is a standing gazetteer and a court newsman as well, his geographical knowledge and his acquaintanceship with the leading politicians and eminent personages of the world being about equally required. In the intervals that occur between the arrival of telegrams, this fourth gentleman is whiling away his time by reading a huge pile of flimsy, giving accounts of suicides by hanging, drowning, poisoning, and other means—of which a large number take place daily in London, only the most interesting of which, however, are published—of attempted suicides, of accidents of every conceivable kind, and of alleged mysterious occurrences which the fertile brain of the impecunious penny-a-liner endeavours to palm off on the wary and suspicious sub-editor and his astute assistants.

But what is the chief sub-editor about during all this time? He is busily engaged in throwing 'copy' away. As the news comes in, he hastily glances over it, and that which at the first sight appears to his practised eye unfit for publication is immediately, to use a technical expression, 'basketed.' That which he thinks may yield some readable matter is accumulated into a little heap, to be lifted by the first assistant disengaged. Then as the revised 'copy' leaves the hands of the assistant, the chief sub-editor again looks over it, to ascertain whether, in his judgment, the whole or some part of the particular matter may not indeed be worth publishing, or whether the assistant may not have allowed some injudicious sentiment or libellous expression to escape his attention. The principal generally writes the summary of the foreign news, and is particularly attentive to the titles given to the various paragraphs, telegrams, reports, and so forth, as well as to the arrangement and disposition of the news into articles of so many paragraphs, the prominence to be given to the article in the paper, and as to whether particular news shall be given in the form of a paragraph, or as a separate article with an imposing heading, and whether the type shall be minion, leaded minion, or bourgeois.

Thus the night wears away, and half-past one A.M. is reached without much cessation in the amount of silent progressive work in the sub-editorial room. Then there is a great and sudden falling off, and by two o'clock the assistants are generally dismissed, the chief remaining another half-hour to see the paper 'to bed'; that is, to ascertain that the foreman printer has carried out all his instructions, and to see that no hitch occurs at the last moment. During the night, this important functionary has had interviews with the Editor himself and foreman printer as to the number of columns in leading articles, specially ordered articles on general topics, literary reviews, or letters from correspondents, which the Editor intends to print; and as to the number of columns out of the total extent of the paper which the printer has in type at a specified hour. 'Thus the amount of 'copy'

required is regulated with an accuracy, often calculated to a line!

The sub-editor's peaceful routine is frequently interrupted by importunate visitors. This man wants to know whether the report of a secret meeting of the International Society would be acceptable; and that person whether he could have a letter inserted in next day's issue shewing how badly he had been treated by the magistrate at a district police court, who had fined only a few shillings, a cabman by whom he had been grossly insulted. Then a tradesman's assistant will call to see if he cannot, under the guise of giving the public information respecting a wonderful new invention, obtain the assistance of the newspaper in puffing his master's wares. A critical question will sometimes arise as to whether some special intelligence ought or ought not to be inserted, and a grave conclave of all in charge of the journalistic department of the paper is then held. And thus the night wears away—the paper is at length out of the hands of the literary staff, stereotyped, and got to press; and the tired sub-editor trudges home to enjoy his well-earned rest. And if his home be at some distance, say in the suburbs of London, his head may be hardly laid on the pillow ere the first batch of printed sheets is issuing from the office, or perhaps on its way north or south by rail.

The typical sub-editor is a man of large journalistic experience, and generally between forty and fifty years of age. He is not ordinarily one of your press Bohemians, but quiet, severe, and respectable. His work is of an exhaustive nature, and it quickly ages him; yet the necessities of his position requiring a constant attention to his health, he not uncommonly reaches a green old age, and may be met with in a suburban retirement living upon the savings of his more vigorous years.

ALPINE FLOWERS AND BIRDS.

THERE is no grander spectacle than sunrise in the Alps. The atmosphere is so perfectly clear, that distant objects seem close at hand, only too soon to be obscured in the haze produced by the hotter rays of the noonday sun. My first view of this great awakening of Nature was from the summit of one of the Jura peaks about three o'clock on a May morning. The sky assumed the deepest violet hue; and as the sun rose behind it, the edges of the clouds were streaked with golden and scarlet rays. Then, as with a joyful bound, the orb of day burst forth on the horizon, and all Nature seemed to be hymning its morning song of praise. Far away, rose one pure virgin peak of stainless snow against the azure sky; it was the summit of Mont Blanc, a hundred miles distant. Imagination might easily picture it as the pinnacle of some celestial city.

We can scarcely wonder, when this god of the sky clothes himself with his sparkling robe and golden crown, that heathen nations made him their first object of worship. The early inhabitants of Switzerland sang hymns of triumph at the break of day. Then fire became the symbol, and the shepherds on the Alpine slopes believed they could bring their god down to earth by collecting a handful of dried leaves and rubbing two pieces of wood together. The red spark was kindled, the

tongue of flame broke forth, and then they brought their offerings to propitiate a being so powerful. Milk, butter, and sweet-smelling herbs were poured into it. Happy indeed was it when nations were satisfied with these simple offerings, and did not demand hecatombs of cattle or the blood of men for their deities. Relics of such superstitions are to be found even in this enlightened age : when a fire bursts out in a Swiss chalet, the shepherd may be seen with a small cup of milk in his hand, slowly pouring it drop by drop into the devouring element.

To return to that daybreak scene in the Jura. The snow had not yet melted on the roadside ; but over the white surface and beneath the pine-woods, thousands of crocuses and other spring flowers of varied hue raised their lovely chalices, content to adorn that lonely height, where the steps of man so seldom trod. To the lover of botany, not the least attraction of 'the playground of Europe' lies in its Alpine plants. Those travellers who can visit Switzerland about the month of June have their reward in the wonderful profusion and variety of the tapestried pastures. A month later, I was wandering over the slopes of the Val des Ormonds, gathering cluster after cluster of flowers, drinking in the sweet air, listening to the bells of the cattle, and admiring the rich brown of the picturesque wooden chalets of Sepey ; whilst above all towered the peaks of the Diablerets, then covered with snow, soon to be melted under the July sun.

Here were acres of the beautiful white narcissus, beloved of the gods, with its powerful scent, so dangerous to the nerves, that for this reason it was consecrated to the Furies, who stupefied with its odour those who had incurred their vengeance. The commonest of this class, which we know well as

The daffodils

That come before the swallow dares, and slake
The winds of March with beauty,

were over ; but the smaller kind, sometimes called Lent lilies, might occasionally be found. There were large patches so brilliantly blue with the small gentian that the grass could scarcely be seen ; this was the (*G. verna*), a star of about half an inch across, with a pure white eye ; even more beautiful than the grander bell, which is often used for edging our gardens. The varieties of this class of plants are very numerous, and few display so full a series of colours. It has been said that red, blue, yellow, and white are never found in the same class ; yet they are all exhibited here, with many compound colours.

Though the snowdrop had only left its leaves to mark its habitat, yet there was the spring snowflake, so easily mistaken for it, which, from its loveliness and purity, the Swiss have dedicated to St Agnes, the patron saint of young virgins, and call it St Agnes' flower. The silvery artemisia spreads its highly aromatic leaves, from which the bitter liqueur called *crème d'absinthe* is distilled. One variety is known by the name of the 'old man,' so gray and powdery is its appearance. In France it is the *garde-robe*, as the housewives place it in their drawers to save their apparel from the attacks of the destructive moth. Tarragon is another of the same genus, giving flavour to salad and vinegar ; and all are dedicated to Diana, the

goddess of chastity and purity, from the appearance of the leaves. The cardamine was there, sometimes called the cuckoo flower, as it is found when that bird utters its welcome note. It was introduced into England in 1629, and is described in an old book called the *Paradise of Pleasant Flowers*, as being sent to the author 'by my especial good friend Tradescante, who brought it among many other dainty plants from beyond the seas, and imparted thereof a root to me.' Here is the blue chicory, and harebells richer in colour and variety than Scotland can shew, justifying the poet's words :

The harebell bright and blue,
That decks the dingle wild,
In whose cerulean blue
Heaven's own blest tint we view ;
On days serene and mild,
How beauteous, like an azure gem,
She droopeth from the graceful stem !

Saxifrages are most numerous, and form a beautiful covering to rocks and old walls. The silvery margins to the leaves mark the longifolia ; and the mountain-climber when he sits down to his frugal dinner will not forget to gather the golden variety, so well known as the *resson de roche*, to add a piquant flavour to his bread. It grows at a height of eight thousand feet ; whilst the bryoides has been found above eleven thousand feet high. Here is the favourite of Linnæus, which he named the pink dianthus, or flower of God, with its delicious fragrance ; the purple aster ; countless hyacinths ; tall blue and white campanulas ; the sweet-scented yellow Alpine wallflower ; and the chaste and elegant wood-anemone :

Nymph of the wood and forest glade,
In thine own fair vestal robes arrayed,
In the calm of the silent silvan bowers,
'Tis sweet to gaze on thy drooping flowers ;
Chaste and pure as the driven snow,
Yet faintly tinged with a purple glow ;
Like mountain crests
On some Alpine height,
When the snow-drift rests,
In the evening light !

One more must be added to this long list, the pretty *Clochette des Alpes*, its delicate stem bearing two bell-shaped lilac flowers, fringed at the edges, growing out of a tuft of round leaves like a shilling, and therefore named soldanella. From all these let us make up our bouquet, placing round it the maiden-hair, the holly fern, the cypripedium, and numberless club-mosses and lichens.

But the flowers are not the only attraction to the lover of nature. Ere the sky is coloured, or the light breeze announces the approach of day, the birds give the signal for Nature to awake. There are those that seldom descend lower than the snow-line, and love the wild and magnificent peaks. Such are the now rare birds the golden eagle and the lammergeier, only met with in the deepest recesses of the Tyrol. Organised for the highest flights, they are the true sailors of the atmosphere. There is also the *chouca* or chough, a crow of intensely black plumage, with a yellow beak and bright red claws, which loves the snowy regions. Those tourists who seek the glaciers of Monte Rosa and the Col du Géant will perhaps remember large flocks of them uttering their discordant notes among the broken rocks and steep precipices.

Everything that rises to a dizzy height in the air has a charm for them. Tall fir-trees, steeples, old towers, the battlements of castles overlooking the valleys, isolated peaks, sharp pointed *aiguilles* are the places they choose for their nests. Sociable hermits of the air, condemned like those who dwelt in the desert of Thebes to the most frugal and austere food, they delight in solitude, and the more space that separates them from man the more are they in their element.

There are other interesting species which the Swiss naturalists describe for us. The snow bunting, as well as the accentor, chooses the stony bare ground which lies between the place where vegetation ceases and perpetual snow begins. Nine thousand feet above the sea do they seek and find the insects necessary for their existence; beetles, butterflies, and spiders are nestled in the crags and clefts of the rocks, placed there by Him who giveth food to every living thing in due season.

It has often been remarked by naturalists that the song of birds is borrowed from the sounds heard around. Whether that be true or not, the cry of a bird has often formed its name. Some of these have passed down to us from age to age, and from people to people. Take the crow as an instance; in the Sanscrit we find it called *kara-va*, in Greek *korax*, in German *krähe*, in Latin *corvus*, in French *corbeau*. The imploring cry of the crane is expressed in many languages by its name; German *krane*, in French *grane*, in Latin *grus*, in Greek *gera-nos*. Where is the sportsman who, when hearing that the Sanscrit name for partridge is *titiri*, would not recognise the sound he has so often heard in the evening? A particular page in Aristotle puzzled naturalists, until the curlew's cry pronounced its own name, and cleared up the mystery.

One very remarkable but shy Alpine bird should not be omitted. When the traveller is passing through the pine forests he will hear a sound proceeding from their deep recesses resembling 'crack,' or at some seasons 'curr.' It is the nut-cracker, which feeds on the pine-cones, and is rarely seen. Long before other birds have begun to build, in March, ere the snow has melted off the ground under the trees, it builds its nest; and instead of being noisy, it becomes silent and stealthy in its movements. Standing beside the torrent as it rushes down over the huge boulders, the observer will notice a conspicuous little bird, with throat and breast of white, darting arrow-like up the stream, or perched upon a rock. It is named, like its British congener, the dipper. Then there is the beautiful wall-creeper, with its ash-coloured back and breast, crimson and black wings, and black tail tipped with white, ranging to above ten thousand feet, playing on the snowbeds, and feeding on the scanty vegetation which here and there takes root among the rocks.

Strange to say, there is an abundant supply of insects upon which these birds live, even in the most desolate regions. The Desoria or glacier flea thrives in a temperature seldom rising above the freezing-point; they may be seen in great numbers in the shallow pools of water under the glacier stones, and when disturbed, jump about and rush to the bottom, where they form an animated mass of black dots. Grasshoppers and beetles love the higher pastures; and many butterflies, very rare in England, may there be collected as

they flutter from flower to flower. Very interesting it is to notice the various examples of the wonderful way in which the Creator adapts the forms of animal life to their position. Let us learn a lesson of joy from each of them, breaking through the chrysalis, like the insect, to reach a higher life, and rising like the bird with its joyous song, 'true to the kindred points of heaven and home.'

THE COOL ENGLISHMAN.

CHAPTER THE LAST.

THE family record from which the latter part of this story is derived, is so extremely fragmentary that the story might almost have ended here. From another source, however, the writer has been enabled to present to his readers what they may rely upon as an authentic sequel to the foregoing narrative. It may be that our hero was flattered and pleased by the enthusiasm with which he had been received, which, as he had a very good opinion of himself, could not have failed to be highly gratifying to his vanity. But what is still more puzzling is, that Simon, in a speech which he delivered upon the knoll to the assembled listeners, so twisted the real facts, and misrepresented the whole case, as to make himself appear a man of heroic valour and almost superhuman coolness, which with all reverence for our worthy friend, we have no hesitation in saying was somewhat far-fetched. As the family tradition to which we have before referred does not attempt to explain this extraordinary behaviour on the part of our hero, the interests of strict veracity call upon us to do so, though the task may perhaps be slightly prejudicial to the character of that personage.

The chance of immortalising himself, the prospect of seeing his name spread far and wide, not only among the country-people of A—, but wherever his fame might reach, must have been an almost irresistible temptation. Besides, if the truth must be told, our hero had partaken freely, perhaps rather too freely of usquebaugh, which, by the merest accident we presume, he had found in the inn, and which he had doubtless quaffed to drown the fatigue and excitement of the preceding night; and as his constitution had never been inured to the effects of Irish whisky or indeed strong liquor of any kind, the reader will easily allow for any flights of imagination in the discourse which Mr Simon Lee made to the assembled rustics.

With his insignificant little figure reared to its full height, with his huge white nightcap standing erect on his head, and with one hand raised aloft, to lend emphasis to his words, Simon commenced his discourse in an attitude like that of a Roman orator in the Forum. On the other hand, the auditors below, with their grotesque limbs and eagerly upturned faces, might be fitly compared to a crowd of Satyrs, the fabulous half-human inhabitants of the woody glades.

At first Simon assumed a tone of affected modesty and humility. He did not, he said, take very much credit to himself for the courage and presence of mind which he had displayed on the preceding night. It was only what a man of determined and resolute disposition like himself would have done in similar circumstances; and besides the desire to shew an example to those

whom nature had less lavishly endowed with courage than himself, would naturally have prompted him to preserve a calm demeanour in such a time of danger.

But the usquebaugh beginning to work, Simon gradually launched into a still more self-confident strain, to which the rustics below listened with respectful attention.

It was not for him, he said, to trumpet his own praises, and such he was never in the habit of doing. Nevertheless he must direct their attention—if it were only for their own sakes, and that they might profit by his example—to the peculiar nature of the courage which he, Simon, had fortunately had the opportunity of displaying on the previous night. It might be, continued he, that he had had a kind of pre-science or fore-knowledge of the coming of the flood when he first went to sleep. It was accordingly without any great degree of surprise or alarm that he was awakened at midnight and made aware of its approach. He was aroused from his slumbers, he was called upon to flee for safety. There was the alternative of an awful death, or an ignominious flight. Simon was, he confessed it, subject to human frailties and weaknesses. What human being was not? For a moment he hesitated as to which course of conduct to pursue—but only for a moment; ‘for never,’ exclaimed Simon, growing more and more grandiloquent, ‘will I suffer my honour to be soiled by a base and degrading flight; never will I forsake my post when Duty bids me stay!’

How Simon’s honour could possibly be soiled by taking a common and reasonable precaution to secure his personal safety, or what our hero could mean by ‘his post,’ we have always been at a loss to conjecture. The rustics, however, though the latter part of the oration was somewhat too high-flown to be comprehensible to them, yet understood sufficient of it to perceive that it was lofty and dignified in tone, and worthy of the great man who uttered it. They gave a deep murmur, or rather growl, of approbation and admiration.

Determined to push to the uttermost the opportunity thus afforded, our hero proceeded, by forcibly contrasting his own resolute conduct with that of others who, in time of sudden danger, are too apt to neglect the safety of others in seeking their own.

His first impulse had been to render assistance to those who might be in need of it, when he discovered that the inmates of the inn had fled just before the flood burst upon the dwelling. Thanks, however, to his exertions—though what these were the writer has never been able to ascertain—the inn and a considerable portion of the property it contained was preserved from destruction! ‘But I ask no reward for what I have done,’ continued Simon, with an air of lofty self-denial; ‘an approving conscience is its own reward; and it will be enough if the humble part I have taken in what might possibly have been a frightful catastrophe, shall incite others to go and do likewise upon all future occasions.’

Here, as before, the rustics gave a deep growl of applause, for Simon had evidently spoken something very fine indeed. Our hero concluded his discourse with some fine moral axioms, which coming from so brave a man, could not fail to be both impressive and instructive.

It would be useless to attempt to describe the enthusiasm and excitement which the oration occasioned among its auditors, who, forced to control their emotions while our hero was speaking, were now at full liberty to give vent to their pent-up feelings. Three deafening cheers were given for the ‘cool Englishman’ who had done such heroic deeds—deeds, it must indeed be admitted, somewhat vague and shadowy as regards reality. Indeed, such an outburst of enthusiasm, we are confidently assured, had never been heard, within the memory of the oldest inhabitant.

Mr Simon Lee had intimated his intention to proceed to W— as soon as the flood had sufficiently subsided; whereupon the rustics noisily volunteered to *carry* him there. This offer, however, Simon, after some consideration, declined, stating as a reason his unwillingness to put their zeal and enthusiasm to so severe a test. But his real motive for declining their assistance was, we strongly suspect, a slight doubt on his own part as to the kind of sensation which might be created in the good old city of W— by his appearance in its streets accompanied by so noisy and numerous a band of admirers. He accordingly thanked the energetic villagers in a gracious manner for their proffered aid; but added, that being a man of humble and modest disposition, he was not ambitious of such a public entry into the town of W—, but would be well satisfied if permitted to perform his journey by the stage-coach. Re-entering the inn, Simon changed his garb for that of travelling costume, and after many effusive farewells, was in due course whirled off to W—.

We pass over a period of twenty years, and find that a great change has come over the village of A—. It seems as if some mighty enchanter had waved his wand over the scene, and transformed it by the magic of his potent spell. The little rustic village has disappeared, and in its stead now stands a thriving town, whose streets are noisy with the hum of traffic. Even Nature herself seems to have put on another garb, that she might not be behind-hand in this modern age of progress. The stream which erstwhile traversed the valley, seems somehow to have enlarged itself into a river, with villas and sloping gardens lining its banks. Water-works too have been established upon the river, and a Railway traverses the town, while a large tunnel pierces the hills near the supposed abode of the once dreaded Demon.

Many strangers come and go, some upon business and some upon pleasure. Summer was waning into autumn, when upon a certain day an elderly gentleman, accompanied by a party of ladies, alighted at the platform. They have evidently come from a distance, and to judge by their luggage, they intend to pass some time in A—. Placing themselves in a fly, they are driven to a hotel of somewhat pretentious aspect, in the coffee-room of which they find, posted up over the mantel-piece, the following strangely worded piece of information:

NOTICE.

This is to certify that this Inn—though considerably enlarged and renovated—is really *the* Inn which many years ago witnessed that great Flood, which was so destructive to all other

buildings except *this* Inn. This is also the Inn where the English gentleman lodged on the night of the Flood, who behaved so bravely on that occasion, and whose memory yet lingers in these parts.

The bell is rung, and the landlord is summoned.

'May I ask,' interrogates the elderly gentleman of the party, 'if you recollect the great flood which took place twenty years ago?'

'Indeed I do sir,' replies the obsequious host, 'for I was landlord of this inn when it was nearly carried away.'

'Have you ever again seen the English gentleman who stayed in the inn upon that occasion?'

'The Cool Englishman, as we called him sir. No; he has never, to the best of my knowledge, been in A— since.'

'Well,' quoth the elderly gentleman, raising his hat, 'the Cool Englishman was your obedient servant, come to revisit the scene of the disaster!'

THE NATIONAL ALBUM.

THERE are many national records stowed away in various corners of the vast metropolis of the British Empire; but there are none of so sadly interesting a character as those of which we are about to write. Some records immortalise all that is good in a nation—its valour, its industry, and so forth; but there is a dark side to every picture; and merry England, with all its beauties, its smiling fields, its pretty cottages, lordly mansions, and industrious people, possesses a record, the sadness of which is vivid and striking.

We find this dark record in a series of books which are kept at the Home Office; and from the fact of their being continuous volumes, and having every page illustrated with the portraits of persons who have at some time or another been confined in one or other of Her Majesty's prisons, we cannot find a more appropriate name for the whole series than that of *The National Album*. The volumes in question are of the ordinary ledger size as used in commercial houses, are bound in dark-coloured leather, and are arranged in presses according to the year and letters of reference. In these books are to be found the 'record' and *carte-de-visite* of every prisoner confined within the limits of the United Kingdom; the governor of each prison being required by law to forward to the Home Secretary within a prescribed period the particulars relating to each new prisoner whom he takes into his charge. On arrival at the Home Office, the records and portraits are placed in a box with alphabetical compartments to it, where they await their turn to be entered and fastened in the particular book for which they are destined, the portrait being gummed upon the left-hand side of the folio, and the record written to the right of it.

In many of these portraits the prisoners, especially those sentenced to short terms, appear in their own clothes; while those who are undergoing long periods of imprisonment are photographed in their prison dress. There they stand, row after row, men, women, and children of all ages, and of every condition in life, from the fraudulent bank director with the gray hairs of age, down to the little ragged Arab of the London streets, forming

in never-ending file the great criminal army of England. Sadly and painfully interesting are the pages of these fearful volumes; and as we turn over the leaves, the eye becomes fascinated with the stolid faces, and the mind absorbed with the details of the dark secrets which the dread records on every side ruthlessly reveal.

When a prisoner is charged with committing a crime, and it is thought that he has been previously convicted, the police have only to refer to the index to the Album, and if the name of the person is there, they will also find the number of the folio in which his portrait and record are entered; and on turning to it will of course immediately see whether it is the same individual or not. This is how the previous convictions of the prisoner in a late notorious murder case were brought to light. Very few of the faces in the National Album, when allowance is made for the disfigurement caused by the prison dress and cropped hair, exhibit any very marked peculiarities, though here and there we find a countenance of a sensual and somewhat forbidding aspect. Strange to say, the records of many of these unhappy creatures shew that they have received a liberal education, and have also at an earlier period of their lives attended Sunday-schools.

During the past six years about *one hundred and eighty thousand criminals* have thus been registered; and a volume, under the title of the *Habitual Criminals Register*, containing the portraits and records of those who have been convicted more than once, has lately been published by authority, after having been printed by prisoners in Her Majesty's Prison, Brixton. There is a severe touch of irony in the fact that some of those whose features and acts are recorded in the pages of the Album should thus be engaged on a work destined to do themselves a bad turn at some future time; though, even with these precautions on the part of the authorities, a goodly portion of criminals and their confères manage to escape the clutches of the law.

Many of the personages who figure in the National Album have passed the greater part of their lives in prison; and the number of *aliases* adopted by them is rather amusing; one woman, for instance, who had been convicted for the thirty-ninth time, having no fewer than sixteen *aliases*. In addition to the volumes already mentioned, there are others containing the descriptions of certain marks which have been found on the bodies of prisoners on their first entering the prison; and in cases where these have been found difficult of explanation, rough pen-and-ink sketches of the same are given. These marks are principally tattoo-marks, and vary in size and description, from the simple ring pricked into the finger, to the figures of ships, anchors, birds, quadrupeds, &c.; while the figures of men or women are exhibited on the breasts or backs of some of the prisoners. The vegetable kingdom is also well represented, and one man was found to be tattooed from shoulders to feet with the representation of a large fish. Many of the marks are of a description fit only for record in the pages where they are to be found, and are calculated to excite wonder at the depraved taste of those permitting themselves to be decorated in this terrible fashion.

Crime of all kinds is of course represented in

the sad records which cover the pages of the National Album; but one is struck with the frequency of the convictions for assaults on defenceless women and children, and for other crimes of a nameless nature. Many of these, if not the majority of them, are, strange to say, committed by old men, or men long past the meridian of life; and the saddest sight of all in these saddest of books is to see the man, whose gray hairs and bowed shoulders tell us only too plainly of the Destroyer's approach, spending the last days of his life in a prison for a foul and degrading crime.

The national sin of drunkenness must be credited with most, if not all, of the crimes which fill the National Album with these portraits and records; and it is a sad thing that one of the most civilised nations on the face of the earth should be a prey to such an unmitigated evil.

One singular fact connected with the portraits of prisoners is, that men who have been charged with and convicted of crimes of a ferocious character appear to be the most meek-faced individuals in the vast criminal army. There are exceptions, but the fact is nevertheless a striking one. There is one important omission in this fearful picture-gallery, for we miss among the faces of the greatest criminals those whom the law has been compelled to deprive of their existence. Neither portraits nor records are forwarded to the Home Office in such cases, as of course there would be no object in doing so. They will never be 'wanted' again!

Many things are done now by the authorities to assist prisoners when discharged from jail, which at one period would have been condemned by some persons as a piece of useless sympathy. For instance, when a prisoner leaves the place in which he has been confined he has, if his conduct has been good during his incarceration, to receive a certain sum of money from the jail authorities, besides a railway pass to his home or the town he wishes to reach. To reach their homes, many of these persons have to pass through the metropolis, where, if not looked after, they would doubtless soon fall into bad company, and quickly find their way back to prison again. To prevent this, a gentleman from the Home Office awaits the discharged man's arrival at the railway station, takes from him his pass, and conducts him in a cab to the terminus of the other railway along which he is to ride to his destination. The ex-convicts are very thankful for this care and attention, and often try to express their gratitude in many amusing ways.

So much for the efficacy of English prison-discipline. It would nevertheless be much better if there could be a system of classification adopted in all our prisons, by which old offenders or habitual criminals might be kept separate from others, and submitted to a severer form of prison-labour. Prisoners might also be classified according to the crime they have committed, so that those who have been convicted of unnatural offences might be altogether deprived of the means of communicating with, and depraving the minds of, fellow-prisoners of purer morals than their own. It seems strange, for instance, why soldiers and sailors who have only been guilty of purely military offences, such as insubordinate conduct, absence without leave, &c., should be compelled to herd with a lot of thieves

and other criminals of a much worse description; but so it is, as the National Album testifies; while even youths and children are thus brought into contact with the vilest characters.

When we remember, however, what vile dens of squalid infamy most of our prisons used to be at the beginning of the century, we must acknowledge that vast strides in the cause of humanity have been taken; for instead of hot-beds of disease, these places are now—as we recently had occasion to remark in an article entitled 'Life Under New Aspects'—like so many palaces of health, in which, though the regulations may be harsh, and the food without variety, everything consistent with the principle of punishment is done to make the inmates well acquainted with the blessings of cleanliness and fresh air. There is no question, however, that the labour, which is undoubtedly severe, is somewhat indiscriminately applied to strong and weak persons alike; and hence the cause of some of the deaths in prison of which we have lately heard a great deal, prison doctors, as a rule, being very much hardened against suffering, in consequence of the impostures with which they so often have to deal. A good anecdote of a case of this kind was related by us in a former number of this *Journal*, in which a man who pretended to have injured his spine, deceived not only the judge who tried him—and so got off with a much lighter sentence than he would otherwise have had—and all his attendants, but also all the doctors who saw him, save one who recognised him and laid bare the imposture.

Amongst the most notable portraits in the National Album are those of the Tichborne Claimant—who is wonderfully reduced in size, and but a shadow of his former self, though looking hearty and well—Sarah Levenson of 'Beautiful for Ever' fame; the Stauntons; the notorious detectives, who succeeded ultimately in getting detected themselves; and—saddest of all perhaps, from one point of view—Dr Baxter Langley, the imprisoned director. These are of course but an infinitesimal portion of the sad array which this remarkable series of black-books discloses to our view, and which extends backward over a period of more than twenty years. There is ample material in their pages for the philosopher, the romancist, and the historian; while the knowledge that the cause of most of the crime therein recorded is due to the evils of intemperance, should cause the advocates for a better state of things to redouble their efforts, and never to cease until the greatest curse that ever blighted the prospects of a civilised community is eradicated from our midst.

THE HALF-TIDE ROCK.

WHEN the writer—who now resides in America—first knew and went to school at Ryde, Isle of Wight, it was little more than a village. Now it is a town of considerable importance, with railroads, telegraphs, and all modern improvements. Then there were no steam-packets plying across the Solent. The principal portion of the growing town was situated on the rising land west of the flat, then called 'the Dover,' through which meandered a small salt creek or inlet of the sea, from whence

the salt-pans used to be supplied in the days of the old French war, when England was chiefly dependent on her supplies of salt from the evaporation of sea-water. The part of 'the Dover' near the sea-shore was covered with graves of the men who had been drowned or destroyed by the sinking and destruction of the ships *Royal George* and *Boyne*, whose corpses drifted on shore from Spithead, and were buried in what was then a common and valueless piece of land, although now doubtless covered with streets and buildings. On the rising ground to the east, towards Nettlestone, were situated the delightful house and grounds then called Atherly, at the time of which I speak the residence of the Hutt family. On the front of these grounds, towards the sea, the subsidence of the land, or the washings of the water, discovered the existence of a large underground brick-arched chamber; doubtless constructed in former years of the French war, when contraband trade was extensive, and amongst certain classes popular; and when profits were so large as to admit of the construction of such underground and secret receptacles—unused when discovered—but which being built in a bank of earth, formed a safe method of concealing from the officers of the law all kinds of contraband wares.

This place we schoolboys knew as the 'Smugglers' Cave;' and in those days there was many a legend connected with it, which curious youth extracted from garrulous old age. There never was such a place for tales of adventure and smuggling, in which the narrators had taken part, as Ryde; and amongst others, the following tale was told to the writer by an aged seafaring man, who took delight in getting hold of young folks and spinning the toughest yarns, none the less wonderful for having occurred so many years ago. One of these yarns related to the Smugglers' Cave, the neighbourhood of which had been the scene of the tragedy which we now proceed to narrate.

James Morrison was one of a band of smugglers, and one of the most efficient of the body—always active and enterprising—the first to point out a hazardous exploit, and the first to carry out his own plan. He was admired by all his mates, and was the very life of the lawless society in which he moved. His comrades adored him; and his natural enemies the custom-house officers, looked upon a capture as nearly hopeless when once James was known or suspected to have a share in the transaction. His youth alone prevented his being the captain of the tribe; but the elders, although they admired his spirit, feared his rashness; and it was always considered necessary to call in the aid of the older heads to moderate the zeal and repress the recklessness of his advice and proceedings. He was never known to desert a friend under any circumstances, or even a cargo whilst there was a chance of success left; and his uniform good-luck shewed what daring can accomplish, when upheld by an intelligent head and a dauntless heart.

William Lowe was another member of the fraternity, and his gifts lay in an almost opposite direction to those of Morrison. Covert and sly, he was always ready to catch at a half-suggested idea and make it his own. Cautious to almost the verge of timidity, he seldom or never undertook anything in which he did not succeed. But although every one of his fellows recognised his usefulness, none loved him. None distrusted him, because all believed that the dreadful oaths by which the society were bound together were too terrible to be broken by one so careful; and the awful punishments which were known to await a convicted informer, would, every one supposed, deter even the worst amongst them from committing the blackest crime with which a smuggler can be branded—that of informing against his accomplices.

Strange as it may appear, these two men were friends. They were seldom apart. On more than one occasion they had rendered the most material service to each other. James had saved William's life, and rescued him several times from the fangs of the law. William had by his prudence saved more than one cargo for James. And to all appearance, their friendship ought to have been cemented by mutual benefits bestowed and expected; but it was so on one side only. William often envied James his brilliant success, and more than all, envied his larger gains and his influence with his companions. On one occasion Morrison had injured Lowe, without knowing it, in a tender point, 'the affection of woman;' and the latter vowed, though secretly, to have revenge.

Morrison had embarked his all in one transaction, the favourable result of which would give him independence, or, at all events, would enable him to marry the object of their joint affections, who preferred his bold and brilliant character to that of his more sly and prudent associate. What will not a combination of self-interest, anger, and injured affection effect? The tempter saw his opportunity; the means were at hand. Secret information was given by Lowe to an officer of great activity and address; the best methods were adopted to secure success by the officers of the law, and the result could scarcely be otherwise than favourable to their wishes.

The eventful night came; the whole gang of smugglers were collected; the venture was one of more than ordinary value, and expectation was at its height, when one of the scouts rushed in amongst the smugglers and gave the alarm that they were betrayed and surrounded. The kegs of spirits had all been landed; the horses loaded with the rich parcels of silks and other excisable articles, and all was in readiness for a start inland. The boats had shoved off in security, after effecting the landing. What could be done? If the boats were recalled, the necessary signals would betray their position. If they were not recalled, the loss of the whole venture seemed inevitable. In this dilemma, Morrison proposed that a division should be made—that the least valuable but most numerous of the packages should at once be taken in the direction in which the officers were known to be; whilst the remainder of the goods, being the chief hope of the expedition, should remain stationary for a time; and when those in charge

heard their comrades engaged with the officers, the reserve should make a rush in another direction and, if possible, escape. This plan was too hopeful not to be carried into immediate effect. Morrison was left in charge of the reserve, or most valuable part of the cargo; whilst Lowe went with the other. At that time, forfeiture of the goods was the worst to be expected; the severe laws against the persons of such offenders had not been enacted. The punishment of a *row* was only a short imprisonment, if detected; but they generally managed to escape; for the officers were too eager to seize the goods, upon which their hope of reward rested, to look much after the offenders, from whom nothing but hard knocks could be had, and the capture of whom was, to the most sagacious of the officers, very much like cutting the throat of the goose which laid the golden eggs.

The expedition, divided as aforesaid, proceeded towards the officers' station, and as was expected, were immediately pounced upon. The usual rattling of sticks in the fight which ensued, and the shouts of the combatants, warned Morrison that his time for action had arrived, and he moved quietly off accordingly, with every chance of success, so completely had the ruse taken. Suddenly a cry arose amongst the officers: 'Divide lads, divide; they make off with the best part of the booty towards Nettlestone.'

The word of command was given; the already captured goods were left in charge of half the number of officers; and the rest and strongest party of the custom-house people, mounting the captured horses and their own, started off in the direction pointed out. Then occurred a fearful race. The smugglers having the advance of nearly half a mile, had at first the advantage; but their heavily laden horses could not long preserve their speed; and after a severe chase, the flying party were overtaken. Morrison, nothing daunted, rallied his men, and placing the horses in the rear, with directions to the drivers to move on immediately they had recovered their breath, and as soon as the fight commenced, if possible still to effect their escape.

James Morrison and his men fought like tigers at bay; to him capture was ruin, not only to his fortune, but to his hopes of love and happiness. He was everywhere through the fight; none seemed able to stand before his blows, when at last he came hand to hand with the chief officer in charge of the party. If he were vanquished, the goods would be safe. James's strength seemed doubled, his eyes flashed fire, and the blows of his stick could be kept off no longer. The officer had behaved with great forbearance as to sacrificing life; but finding himself hard pressed, and after several warnings, drew a pistol and fired. James fell. The rest of the smugglers seeing resistance hopeless, and yet determined to save their leader, made a desperate rally and carried him off, leaving the goods undefended. The capture of the goods was complete, although all the men escaped; and in an hour or two James awoke to consciousness in the hands of his friends.

Shortly after their rout, the whole party of smugglers met at their usual place of rendezvous, which was the cave or subterranean chamber before mentioned. The labourers had according to custom immediately dispersed to their own houses; for

they, although employed, were never trusted with the secrets of the gang. When the muster was complete, the whole party arranged themselves for a consultation. Poor James was made as comfortable as possible; for it was found too dangerous to remove him to his usual place of residence, which was at a considerable distance; and since the effusion of blood had been stopped, he had rapidly revived. The wound was not considered very dangerous, and the hardy fellows were used to treat everything but death lightly. Lowe was nearly the last who arrived. He had hesitated a long time whether or not he should come at all; but with the consciousness of guilt, had considered that his staying away might have a suspicious appearance; he therefore put a bold front on the matter, and with an air rather more swaggering than usual with him, he made his appearance with his fellows. The arrival of the few remaining members of the body was the signal for the commencement of the consultation as to the cause of the misfortune, and the best mode of avoiding such a thing in future.

The old captain of the gang was the first who spoke; in a few nervous words he explained to the meeting that it was quite clear treachery must have been at work; that the very force in which the custom-house officers mustered, was of itself a convincing proof that they expected great booty and considerable resistance. The idea of treason was generally repudiated by the smugglers. Who, they said, could be guilty of such a thing? Were they not all as brothers? Had they not too often been tried, to allow even for a moment of such a suspicion being cast amongst those present?

'It must have been the boat-people,' said Lowe.

'It could not have been they,' replied the captain; 'for, as was customary, they did not know where the fall was to be made until a few minutes before, when the information was given to them by signal by myself with the usual flashings and cross-lights.'

One brought forward one suspicion, another a different one, until at last an old smuggler, almost borne down by years, whose duty it was to watch about through the country, and do the other light business of the company—for his strength for carrying goods and fighting was gone—quietly rose and said: 'Comrades, guard the door.' Every one started to his feet. All knew that some information of the greatest importance was about to be given, and that the traitor must be amongst themselves. Every one looked at his neighbour with blank dismay; the blood left Lowe's cheek, but the light was too gloomy to shew it to his fellows.

Those whose duty it was, reported that all was secure, and the old man then called out: 'William Lowe, step forward, and answer for your treason to your comrades!' All shrank from him; and although he did not advance, he was instantly standing alone. The old man then resumed: 'William Lowe, where were you last Thursday night?'

He hurriedly answered: 'At home;' that he had not stirred out after dark.

'If so,' said the old man, 'how was it that I met you in Union Street in Ryde after eleven o'clock at night, coming in a direction from Lieutenant's Austen's house? I could not be mistaken;

for I have lived too long in the world and had too much to do with the "fair trade" not to make myself certain where my suspicions are once aroused. I should have mentioned it to the captain, but that it was then only suspicion, and I dared hardly think you were a traitor.'

William answered not a word; in the hard-set looks of his comrades he saw his fate.

'Further than this,' pursued the old man; 'Bill Simmons, one of the labourers, told me that at the first fight he saw a man with a red neckerchief leave our ranks, run behind a bush, and speak to the lieutenant just before the cry was raised that the best part of the goods had gone off towards Nettlestone. Who present has a red neckerchief but William Lowe?'

All looked round; the proof was deemed conclusive, and each man looked in his neighbour's face for confirmation of his own opinion. There was evidently but one feeling.

The captain, after a few minutes' consideration, and examining the faces of his comrades pronounced the fatal words: 'William Lowe, you have betrayed us. You have broken your oath. You must die!'

The unhappy wretch saw not one gleam of pity in any face—his fate was sealed, and he well knew that his death would follow. Notwithstanding all this, he did not fail; his cheek was livid, and the moisture oozed from every pore, yet there he stood erect gasping for breath, condemned as well by his own conscience as by the voice of his comrades. A sudden cry from the man who stood nearest Morrison's bed called attention to the wounded man. All thought for the time that he was dead; but he had only swooned, overcome by his own feelings on hearing the sentence given; for at that moment the reality of his friend's treachery flashed suddenly on his mind.

Nothing now remained but the mode of carrying out the sentence. It was the first crime of the kind that had taken place in that neighbourhood and amongst that set; and it was deemed necessary that the mode of execution should be the most horrible and protracted that could be devised; yet at the same time no one liked to stain his hand with blood.

The old man who had brought the accusation solved the difficulty. 'When I was in Doherty's gang in the north of Ireland,' said he, 'we were betrayed then as now, and the sentence was that the informer should be tied on to a half-tide rock at the time of the rising flow of the tide, and left to drown.'

No acclamation greeted his proposal; but in the stern murmur which arose from the assembly, the old man read their approval of the plan.

The captain again addressing the culprit, said: 'This night, at the rise of the flood-tide, you shall be exposed to its mercy; and all within hearing of our justice shall learn what is the fit fate for an informer.'

Lowe's heart died within him. One cry for mercy passed his lips; but he saw that all was in vain, and he again sank into a gasping silence. As it was now early dawn, all except those left to guard the prisoner separated, and returned to their homes.

The following night—it was a calm, bright, beautiful moonlight—the tide turned to the flood at nine o'clock; at ten some dark bodies were seen

moving over the sands from the wood on the shore in front of Atherly—where the Smugglers' Cave is situated—in the direction of a number of isolated rocks, or rather large stones which were sprinkled here and there on the sand in front of the cave, but about a quarter of a mile from the high watermark on the shore. The tide runs out and leaves a great extent of sandy beach, for possibly nearly a mile on that shore, and the rocks spoken of are more than half-way between high and low watermark. They are all black with a growth of seaweed, so that a man's figure in dark clothes would not at a distance be observed upon them. In a short time the dark objects were seen returning. For an hour afterwards all was silent; when suddenly through the night-air arose a cry so appalling, that it struck at once to the hearts of all who heard it. Some of the nearest residents in Ryde not connected with the boatmen rushed to the beach, feeling assured that some accident must have happened; but all connected with the water seemed to be absent, and their boats were all stranded on the beach awaiting the return of the tide. 'It comes from the rocks near Atherly,' said one; and the whole posse of listeners rushed to the spot, where in various attitudes of silent attention they found a number of men apparently boatmen. 'What is the meaning of that unearthly cry?' they eagerly inquired. But from the men assembled they received no reply. At the time, it was supposed that all were too much horror-stricken to interfere; but afterwards their behaviour was attributed to a different motive.

A slight ripple now curved the surface of the water; and the moon, previously sometimes obscured by light clouds, shone out in full refulgence. The ripple must have washed above the poor wretch's lips, for instantly there burst forth a torrent of gurgling cries; these continued for a few moments, when fainter and fainter grew the sobs of mortal agony, and it was apparent to all that human assistance was of no further avail. As soon as this was certain, all the boatmen left in parties of two and three, none looking back or speaking. The towns-people after agreeing amongst themselves to be on the spot the moment the tide rendered examination practicable the next morning, separated for their homes, to retail the mysterious and dreadful story to their expectant families.

The morning came fine and clear. The earliest of the spectators of the night before rushed to the spot; and there, in the centre of the group of rocks, they found the body of a man in a sitting posture chained to a 'half-tide rock,' stone dead—the expression on his countenance indicating the awful death he had died. It was William Lowe.

Even in the days of the narrator's school-boy life, the old inhabitants of Ryde shunned the spot of a moonlight night when the tide came rippling on. The same shrieks in imagination were again heard by them; the horrors of that fearful night were recalled to their minds; and they used to point out to their children and visitors to the watering-place the spot where 'the condemned smuggler was chained by his comrades to that "half-tide rock," and drowned.' A proper fate, they used to say, for all informers.

CHAMBERS'S JOURNAL

OF
POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 826.

SATURDAY, OCTOBER 25, 1879.

PRICE 1½d.

TWO REMARKABLE TAILORS.

NEITHER the late Professor Craik in his very interesting book on the *Pursuit of Knowledge under Difficulties*, nor Dr Samuel Smiles in his *Self-help*, has exhausted the material illustrative of self-education which diligent readers may find in the annals of the remote or the recent past. We have before us two brief biographies of men who, in the eighteenth century, astonished not only their neighbours, but many others, to whom fame made them known by the extent of their acquirements, and by the ardour with which they had struggled against adverse circumstances to obtain the knowledge they sought. It is not quite so easy now to appreciate the difficulties in the way of these men as it was when the biographies were written, more than a hundred years ago. We can recall to ourselves the successive changes which have occurred in that time in the condition of our working-classes, and the marvellous increase in the means of self-culture. Scarcely one of the societies, either public or private, which have since done so much for the enlightenment of the masses of the people had then begun working. There was no cheap literature of any kind. Newspapers were then a luxury even to the middle classes, and a stray glance at them was all that a working man could hope to obtain, even though he possessed the ability to read. To us, looking back to these times, it must seem to have been terribly arduous for a man depending on the labour of his hands for bread, to become worthy of the epithet 'learned.' And yet that epithet was rightly applied to the two men of whom we are about to write. We have two reasons for linking their names together: they were both tailors, and they both devoted themselves to the study of languages. Their names were Henry Wild and Robert Hill.

Perhaps the best way to introduce the two men will be to mention an incident in the life of Wild. It was whilst he was residing at Norwich, and working there as a common tailor, that Dr

in estimation by the learned world—was offered some singular Arabic manuscripts by a bookseller of that city. The doctor evidently thinking that the demand for such goods must be next to nil in Norwich, declined to buy at the price named. That was a ruse of his. He thought he could get them at a cheaper rate when he next called, and even fancied that the bookseller would send to say he might have them at his lower rate. To his surprise, the bookseller did not send, and he called again, asking that he might have a second look at the manuscripts. 'They're sold,' said the bookseller. On asking 'To whom?' he was told, to a poor tailor; and he despatched the bookseller at once to stop the tailor from cutting them up for measures. In a short time the poor tailor Wild came with the bookseller, carrying the manuscripts in his hands and, to the delight of the Dean, uninjured. The Dean's delight was, however, changed to surprise when Wild declined to part with his Arabic treasures. He was incredulous. What could the man want with them? Wild simply replied that he wanted to read them. Prideaux hardly comprehended the tailor, and asked that humble individual to favour him with oral proof; and was astonished at the ease with which the man first read a passage and then translated it into English.

The Dean did not let this incident pass without seeking to benefit this out-of-the-way student. He made inquiries about the life of Wild; and what he learned added to the impression which the poor tailor's reading had made. It seemed that Wild's friends, when he was a boy, were able to send him to the grammar-school; and there his success was so great, that an effort was made to enable him to go from school to the university. But unfortunately his friends could not manage that, and were forced to apprentice him to a tailor. After his seven years' apprenticeship, he served seven years as journeyman, and then another seven years after that. During this twenty-one years' working on a tailor's bench, he had almost forgotten all that had made him remarkable at school; but at the end of it, a long illness of fever and

ague, continuing from between two and three years, so reduced him, as to make work impossible. Whilst thus compelled to be idle, he amused himself by reading certain odd volumes of old divinity which fell in his way; and the frequent references which he found to the original Hebrew text, bred in him a desire to study that language. How to manage it was not easily found out. At last he obtained an English-Hebrew grammar and lexicon; and working at that, he was astonished to find how his old school knowledge came back to him. Strange to say, this new and now abiding interest seemed to have a good effect upon his health; and as he became stronger, he went on stitching through the day, and studying persistently half through the night. The Hebrew did not satisfy him. He found that as he came to understand it, its relations to other oriental languages became apparent, and he set himself to master them. It is difficult to make out how he obtained the requisite books for his studies, but he did get them; and he used them to some effect, as his strange introduction to Dean Prideaux was the means of shewing.

The Dean was so much interested, that partly from his own means, and partly by the aid of gentlemen who had a fellow-feeling for this tailor-orientalist, he enabled Wild to remove to Oxford, where, though he never became a member of the university, he was yet able to prosecute his studies in the Bodleian, and to maintain himself in a very humble way by translating or making extracts from oriental manuscripts. He lived thus for several years, and was known to the other students in the famous Oxford library as the Arabian tailor. Wild next removed to London, where Dr Mead helped him to some little patronage; but he never obtained more than was sufficient for his very small wants. He taught and translated, and in 1734 he published the only book to which he put his name. His poverty continued to the very last, but never seemed especially irksome to him. He had no notion of, and indeed was every way unfit for that kind of success which most men seek to obtain. Knowledge was to him all in all.

Our other tailor, Robert Hill, was a native of Tring in Hertfordshire, being born there in the last year of the seventeenth century; but the greater part of his life was spent in Buckingham, in which town he died in 1777. The story of his life, from which we cull the following information, is dated 1754, when he had still more than twenty years to dwell among men. We cannot therefore speak of the end of his life—of what he was and of what he did in these twenty years—but what we do know of him is worth repeating. He was indebted to a relative for his acquaintance with the alphabet; and having that, he managed to obtain such further knowledge of letters as enabled him to read while he was a boy at home. All the time he ever spent at school was about seven weeks, during which he obtained some notion of writing the letters and words which he already knew how to read. When he was fourteen years old he was apprenticed to a tailor at Buckingham, and even then manifested a strange desire to master languages. The first money he managed to scrape together went in the purchase of a Beza's Testament in Latin and a Latin grammar. He found it far from easy to learn Latin from these books, and hit on the admirable

device of doing some service for one or other of the boys attending the Free School, stipulating that he should have in return the English of certain words that puzzled him, or an explanation of a perplexing rule in his grammar. Before he got to the end of his apprenticeship, he had not only learnt his trade—he was quite diligent at that—but he was proud of being able to read several Latin classics with much ease. Of course this sedulous studying of his was talked about, and at last became known to a gentleman who, having recently lost a son, gave to Hill the books which had belonged to his boy. Among them was a Greek Testament which proved an attractive curiosity to the young tailor. He was fortunate in having a little help to acquire this language, and in about three years could read Homer with some pleasure.

His desire 'to know' became so great that he failed to attend to his work; and for some years he became a sort of travelling tailor, going from town to town, and from district to district, but always on the look-out for some one who could help him with this or that language. His was not an ordinary sort of life to lead; he seemed unsettled and of a vagabondish nature, but was nevertheless intent on what was then the one thing needful to him—knowledge. When he was thirty-four years old he began to study Hebrew, but found that his Shindler's grammar was not very helpful; it took for granted that so much was known which, in this case at least, the student did not know. Hill thought that if any one knew Hebrew, a Jew should, and accordingly looked out for one. He found one on tramp like himself, and proposed that they should travel together, in order that the Jew might with the greater ease teach Hill the grand old language of the Bible. Unfortunately, this was so little, that Hill was disappointed, and looked out for another member of the ancient race. He had to seek not one only, but many, and all alike wanted the ability to teach. Then he turned again to grammars, and working steadily through eleven different ones, he at last became familiar with the language in which the Bible was given to mankind.

Besides his study of languages, he devoted himself to all sorts of out-of-the-way inquiries, tramping on from place to place in the daytime, and asking many questions as he went; or while he sat cross-legged on some cottager's table mending his torn or worn garments, and then sitting up long into the night with his grammar and his books in strange tongues.

At last advancing age warned him that he must end this vagabond life; and so he went back to Buckingham, where for the rest of his days he remained in obscurity, earning just enough to keep him from starving; but always content; his mind filled with the curious information picked up by him in his little travels, and ever turning with pride and interest to the great books which in Latin, Greek, and Hebrew always had in them food for his hungry mind. He made more in appearance as an author than Henry Wild did, having in his later days published *Remarks on Berkeley's Essay on Spirit*, *Criticisms on Job*, and *The Character of a Jew*; this last work being one in which he could well illustrate the old saw that familiarity breeds contempt. We need not say that Hill's knowledge of Jews was small, and that

if it had been his lot to have been known to men of that race who were then, and whose sons are now distinguished for their learning, he would have appreciated the distance and the difference between the vagabond and the educated Hebrew.

LANCASHIRE MEMORIES.

We have been perusing a pleasantly written work, 'Lancashire Memories,' by Louisa Potter, seemingly a young candidate for literary fame. The book consists of a series of sketches. One of these, styled *The Maudesleys*, we offer in an abbreviated form as a specimen of the authoress's description of early remembrances.

'There are few people I remember better or regret more than my mother's old friend and relative Mrs Weston; partly because, in virtue of relationship, she claimed a right to tutor, direct, and advise me; but chiefly because that same relationship procured for me the charming privilege of frequent visiting at her house from my earliest recollection until the time when she, alas! could welcome me no more.

Maudesleys, where she lived, and had lived all her life, was a steady, comfortable, respectable, unpicturesque dwelling, with a red brick front, a portico, and two windows on each side of the door, with five above. Mr Weston was a thriving merchant in the large town seven miles off, and in addition to his interest in bales of cotton and packs of gray calico, was smitten with farming, and cultivated acres and acres for his own particular pleasure; and so between steam-churns and turnip-cutters and thrashing-machines and divers breeds of cattle, contrived to lose a very tolerable income each year, as most gentlemen-farmers do. Then he could not give much personal attention to it; for he drove to town in his gig early in the morning, dined in his warehouse in a comfortable room, commanding a grim view of carts loading with cotton bags, enlivened by a very suggestive rope, with a large hook at the end, dangling from the teagle above; and in winter rarely saw his pretty home by daylight.

It was a pretty home (in spite of its bright red front), with its velvet lawn and belt of shrubbery, and a broad winding gravel walk leading up to the front door, so smooth and level—not one pebble out of place. Indeed, how should it? when old Diggle, the gardener, followed the wheels of a departing carriage with his roller; and neither the family, nor those who were very intimate, ever dreamed of driving up to the front of the house, but always alighted at a side-door close to John's pantry, which arrangement spared both John and Diggle much trouble.

A walk through the fine-grown laurels led into the flower-garden, so sheltered, warm, and sunny, that in the early spring, before the neighbouring gardens had recovered from their winter sleep, this was gay with the bright blue hepatica, the graceful jonquil, and the pale lilac flowers and broad spotted leaves of the dog-toothed violet. One side of the garden was bounded by a high wall, covered with peach and nectarine trees, and in autumn a matting was nailed below, in order to catch any fruit that might fall. Many an earnest inspection have I made of that matting!

The fruit-trees were interspersed with climbing roses, the sweet-scented clematis, and the trumpet honeysuckle; and then came the greenhouse, of an obsolete construction—a mere shed of glass, such as Cowper might have sat in, and apostrophised the friendly goldfinches that cause mankind to blush. In front of the greenhouse were beds of ranunculus and anemones, dazzling in their rich crimsons and purples; and in autumn the gorgeous scarlet geranium or verbena, that gem of a flower, whose brilliant colouring seems to emit a light of its own. A gravel walk, neatly edged with box and bordered with flowers, encircled the garden; and in the centre was a smooth lawn, dotted over with azaleas, rhododendrons, pink thorns, and the magnificent tree peony. A pleasant, sweet smell floated about in that garden, warm, aromatic, and fragrant—a gentility of scent, so to speak, that is quite indescribable, and which I have never perceived in cottage gardens, or farmhouse gardens, or nursery gardens, though there may have been as many flowers, or more. A laurel hedge on one side of the garden divided it from a large park-like meadow of undulating land, surrounded by a belt of plantation; and being used as a ley (from which, probably, the place derived its name, Maudesleys), was usually enlivened by sheep and cattle. A pond, near the edge thickly set with water-lilies, was at once a mournful interest and a solemn warning; for long ago, when Mrs Weston was quite young, she had a little brother Willie of five years old, and his mamma was very ill, and died, and Willie was forgotten; and when all was over, and the children gathered together, there was no Willie. They searched everywhere; and at length he was found floating amongst the water-lilies, and his hands still grasping the dazzling white flowers that had cost him his little life; so that pond was always a reminder of little Willie and the danger of gathering water-lilies. The large farm-yard beyond the garden teemed with live things—horses, cows, dogs, pigs, and poultry, the pet pony "Gipsy," that would carry three at a time, and—when she condescended to dawdle out so far—the pet lap-dog "Sylph." I can hear now the gobble, gobble of the turkey-cock, the queer shrill cry of the guinea-fowls, the jovial quack, quack of the ducks, and the inward, complacent crooning of the hens, as they pecked about in the train of the lord of the seraglio, a fine large game-cock, always on a visit at Maudesleys, and sent by the lord of the manor for board and education until wanted for the cockpit; a provision for which and also for the support of a foxhound, was empowered by a clause in the lease.

There was often a brood of turkeys airing on fine days under a coop on the lawn, the mother's blue-and-pink head coming out at all points to recall the wandering chicks. Of all feathered things, the turkey is the most difficult to rear; but these generally did well, under the especial care of Cicely the maid, a steady, severe-looking damsel, who had lived in the family from her youth up, and demure as she looked, had "kept company" all that time in the laundry, on the off-nights of the wash, with bass William of the chapel choir. Cicely was a strict Presbyterian, with a sour, uncompromising manner, and was in the habit of displaying her love of Dissent and stiff-necked opposition to Episcopacy

by flinging open the front door widely, with a warm smile of welcome, to all Dissenting callers; but held conversation in a forbidding "don't-come-in" tone, through the narrowest possible chink, with all orthodox visitors. Cicely kept an eye on the doings of the establishment; didn't "quite approve of John," though he did set up an air of integrity and uprightness as dauntless as his red waistcoat; looked suspiciously on the red cheeks and bright cap ribbons of Mary the housemaid; detected flirtations in the dairy, and expressed her sentiments thereupon in no measured terms, and with very indifferent success; for the principal culprit, Charles the cowman, would retire to the shippon whistling and muttering: "When sarvants is cross I ne'er heed 'em; poor folks' anger means nowt."

There was a fine large fruit-garden near the farm-yard, filled with strawberries, gooseberries, cherries, apples, pears, and all manner of tempting things; but it was inclosed partly by a wall and partly by a hedge, and had a gate that locked, and of which the old gardener kept the key for reasons of his own. Still, fruit was to be got at somehow; for Maggie was not very well one night, and being questioned closely, acknowledged to having eaten sixty green chisel-pears during the day. There was the same plentiful "well-to-do" air indoors as out; no aim at grandeur, but thoroughly comfortable. None of the rooms were large; the dining the most spacious, furnished with bright solid mahogany chairs and tables. A portrait of Mrs Weston's mother over the chimney-piece, and a round mirror suspended by chains from the beak of an eagle, and in which the reflection of the room appeared half a mile off, were all the decorations. The colour of the walls was a pale buff, kindly suggested by the great Sir Charles Barry, who was luckily on a visit when the house was being painted; but then he was only Mr B., a young beginner with a portfolio full of drawings from Athens, just to shew what he could do, and employed in the construction of the neighbouring church. However much that church may have done for the spread of the gospel, it has done uncommonly little for the spread of architectural taste. But nobody talked then of "Early English" or "Later Norman;" and such notions as "transept," "nave," or "clerestory" were obsolete, or savoured of popery.

Up-stairs, the front rooms were devoted to visitors, who occupied the "best room," the "chintz room," or the "green room," according to the place they held in the hostess's estimation. She herself occupied a bedroom over the kitchen, and commanding a view of the stable-yard. The colour of her bed was a grave drab; and right opposite to it on the wall was a good round clock, by which she could regulate the rising of the maids and the punctuality of the men. Next to her bedroom was the workroom, where Cicely might always be found seated at work before a lead pincushion that had once been scarlet, but pricked out of all colour; and there Cicely could and did furnish, to all who were willing to listen, the gossip of the district for miles round. Of the other parts of the house, my memory rests most distinctly and lovingly on the storeroom, and the very promising scent that came out when the door was open—a fragrant combination of sugar, apricots, candied lemon-peel, and gingerbread.

In the early part of my recollection, the only conveyance kept at Maudesleys for the use of the family, besides Mr Weston's own particular vehicle, was a heavy gig with a hood, drawn by old "Smiler," who varied his occupation between airing the mistress and carting the coals. But prosperity advanced; and ambition, like appetite, "grows by what it feeds on;" so the old gig was exchanged for an inside car, and that again made way for a real green chariot, and then the boundary was passed between respectability and gentility. Mrs Weston—or, as her husband always called her for shortness, Mrs W.—had a strong love of the genteel; and an overweening preference for those she conceived to be "somebody" was the one little weakness in her character. In other respects she was eminently strong-minded, and in manner the exact counterpart of Cicely. If there was a disagreeable truth that need not be mentioned, it was sure to come out. She openly disapproved Mrs Thornton's new velvet curtains, bordered with needlework done by the dowager Mrs Thornton with incredible pains, and made a call on Mrs T. purposely to let her know it. She would earnestly request any friends removing to a larger house, to "think well what they were doing, or they were certain to get into debt;" and begged to be permitted to pay her annual visit to her friend Miss Marriott in winter instead of summer, at which season she hoped she should not find it so "very disagreeable." In the company of a steady Whig of the old school, she was sure to speak slightly of Charles Fox; and in that of a Dissenting minister was certain to lament the necessary inferiority of Dissenters' education. She entertained one gentleman caller particularly tenacious about family and proud of his own, by assuring him that his wife's father had once been a stay-maker. That gentleman dropped her acquaintance; but if he did, there were others who did not; and the old teas and suppers were put down with the gig, and dinner-parties succeeded at the fashionable hour of five; and besides all this, there was a fire in the drawing-room every day, instead of only on Sundays. The first effort in the dinner-line was rewarded by Mrs Philips remarking loudly, when oyster-sauce was offered with her boiled turkey: "Well, I did not expect to have met with this here!" But Mrs P. was a sour old widow, that would not have been asked, only she was related to the Philipses of the Park; so what she said did not signify.

Cleaning must have been a very favourite pastime with her. She was for ever painting or scouring or shaking the carpets; the silver was bent and thin with John's continual rubbing; and the knives were worn to a point with the energy of his daily exercise in the boot-hole. John had a habit of letting down visitors, from being company, to forming a part of the family, in a manner peculiarly his own. The first few days he made a grand display of plate, and would then withdraw it piece by piece—first the wine-coolers, then the best dessert knives, an extra cream-jug or butter-cooler, till in about ten days he had got down to what was commonly in use, by which time he concluded the visit was, or at anyrate ought to be, over.

Maudesleys was a lively, cheerful abode; for though Mrs Weston had no children of her own,

she contrived to adopt many of other people's, one niece or another always living there; and a kind and ready hospitality that invited not only her own friends, but her friends' friends, insured a plentiful supply of visitors. She dearly liked children about her, but not in the way of fondling or caressing them. With all her kindness, I never heard her say "my love" or "my dear" to any human being; but she liked superintending children through her spectacles, smoothing their hair, examining their nails, or diving into remote corners in order to see if they were well washed; and if no others came in her way, must needs invite a selection of boys from the minister's school, to the discomfiture of both the nieces and Cicely; for school-boys are no company for girls, and Cicely vowed they ate more sponge-cake in the day than she could make in the week. . . .

The brightest, cheeriest thing at Maudesleys was Maggie, the daughter of a brother of Mr Weston, who resided in France; but owing to the demolition of property occasioned by that very common event, a Revolution, Maggie was glad to accept an invitation from Maudesleys to pay a visit that ended only with the lives of the inviters. Half-English, half-French, the gayest, liveliest, merriest little cricket was Maggie. A face by no means pretty, and a figure a little warped, yet she slid along sideways in a fashion of her own, that was positively graceful; looked up to as an oracle of fashion, and a very mirror of taste, such little jaunty hats she wore set sideways on her "crêpèd" curls, such well-made gigot sleeves, and petticoats judiciously shortened to shew the pretty foot that in her inmost heart she was so proud of; kindly, sprightly, loving, what would Maudesleys have been without Maggie? The great secret of her popularity was her warm and hearty sympathy in the interests of those about her: she was as busy and interested in the school-going and well-doing of the poor weavers' children, as in the plan of a conservatory or the make of a new velvet gown for Mrs Thornton, her wealthy neighbour. . . .

Life went on smoothly and evenly at Maudesleys for forty years and more, and then came a change in the failing health of Mr Weston; when his daily visits to his warehouse were discontinued, and the account-book and ledger, which were hitherto his principal studies, were laid aside for "Blair's Sermons" and "Porteous's Lectures," steady, respectable divinity that could be taken in moderate doses, and was doing something towards preparing for the inevitable journey. He had never played a very important part in the establishment; no need of that; but he had fulfilled the two duties which my friend Miss Humble assures me she conceives to be the sole advantage in husbands, "finding the money and frightening the servants."

Mrs Weston was indefatigable in her attentions to her husband; stood over him whilst he ate, with a determined, "doing-my-duty" air; saw that he followed exactly the doctor's prescriptions; walked out with him, sat with him, and spared no trouble or fatigue in the endeavour to lengthen out his days; but in vain. Death would come; so she waited with a calm endurance for the blow, watched the moment of departure with a sad serenity, and immediately mounted a chair and stopped the clock.

She shewed his memory every respect. The

mourning was solemn and decorous; John was stripped of the red waistcoat for ever, and came out in a full suit of black, with a tuft on his shoulder. Mrs Weston's cap was of the most widowed build; her bombazine was of the finest, her crape of the deepest; but a despairing widow she was not. Indeed, despair depends a good deal on the income: hers was rather diminished, which decided her on leaving Maudesleys, and taking a house at a short distance, and in a rather more genteel neighbourhood—a gentility that amply compensated for any grief she might feel at leaving the home of her life. Changes and misfortunes, it is said, never come singly. She was scarcely settled in her new abode, when Cicely one morning announced her intention of marrying forthwith. She said it reluctantly, with every mark of regret, and would for her own part have continued her engagement for the term of her natural life; but bass William was growing infirm, and thought Cicely might as well attend on him as any one else; and there was no time to spare, as she was past fifty and he verging on three-score. So, with many admonitions on the folly of marrying young, and how uncomfortable she would find it, and how inferior her table and accommodation would be to Maudesleys, and how disagreeable men were in general, and Cicely promising faithfully to come back whenever she was wanted, her mistress was won over to consent, and presented her with a feather-bed, and the stair-carpet with needle-work borders, and a work-table, and that eternal lead pincushion, and a variety of oddments brought to light in the removal.

Mrs Weston reckoned without her host if she calculated on commanding Cicely's services in the future; for in spite of the promise that deluded her into consenting to the marriage, the very first time she wanted Cicely to accompany her as usual on a visit to Ireland, bass, doubly bass William, with a total disregard to both their feelings, observed, he'd "rather hoo didn't go; mebbly hoo'd be sick, or mebbly hoo'd die, or" (and the gist of the matter lay in the third reason) "mebbly I should be poorly while hoo were away." So poor Mrs Weston learned the lesson "The Tatler" tells us, so prettily, he was taught a hundred years before, that his sister, after her marriage, would have him to know that she was no longer "Jenny Distaff, but Mrs Tranquillus."

I rather owe Cicely a grudge myself; for once, when her mistress was feelingly regretting to her my very large family, she replied, in a most unsympathising tone: "Serve her right; she and Miss Phillis were always laughing at large families;" and I do think the weight of the dispensation might have softened even her uncompromising notion of retributive justice; but it didn't.

Servants who have lived more than thirty years in one family acquire ways of their own that would scarcely be tolerated under a new dynasty. There was many a tiff between John and his mistress about the mode of putting coals on the parlour fire, which resulted in his placing the coal-box on the rug, and retreating a few paces, with an air of lofty magnificence, and a determination to wait until she had helped herself to her own satisfaction.

Phillis, one of Mrs Weston's nieces, had found a Strephon in the neighbourhood, and was carry-

ing on a flirtation unknown to her aunt, but discovered by John, who knew all the news in the parish, acquired in the kitchens of the houses about, whilst waiting with his lanthorn to follow the ladies home from the tea-parties, and regularly disburthened his mind of it to the younger branches by the way. It so happened Strephon was a little lame, but "quite an elegant lameness," Phillis said; and that atrocious John would walk solemnly behind his very unconscious mistress, and in advance of Phillis and her companions, in order, as he said, "to light them both at once"—indulging in a very unmistakable limp as he swung the lanthorn to and fro down the lane.

At one time, Mrs Weston was wishful to alter the name of Maudesleys for one more picturesque or significant. Her neighbour, Mrs Ramsbotham, had built a high brick wall between her own dwelling and the high road, and called it in consequence Wallfield; but Mrs Weston inclined to Daisy Bank, only for this difficulty. Thanks to Tommy Diggle's care and attention, the lawn was so trim and velvety, there was never a daisy to be seen; all were carefully rooted out; and her zeal for Daisy Bank was somewhat quenched when, relating the dilemma to a gentleman friend, he replied: "Then, madam, suppose you call it Lack-a-daisy Bank." The names of the farms and demesnes all around were quaint and old; in use, possibly, since Lancashire was a county—Hollin-hurst, Ditch Ash, Thatch Leach, Besses o' th' Barn, Poppy Thorn, Sheep Hey, could not well mingle with Daisy Bank or Mount Pleasant. Then Woodley was proposed as meeting every requirement, and Woodley it remains.

I saw it again after the lapse of forty years. The kind hostess was no more, the nieces all dispersed, the friends all gone, the house was let to a stranger, and I was forgotten.

CURIOUS ADVERTISEMENTS.

ADVERTISEMENTS are not, in a general way, entertaining reading, yet, even outside the agony column, they often pique our curiosity and afford matter for speculation. If some advertisers vex our minds by propounding unsolvable riddles, others amuse us by ingeniously contriving to say what they do not mean. No honestly intending tradesman could possibly desire 'a sleepy partner in a respectable ready-money business;' nor can anybody require 'an experienced nurse to take charge of a young child between thirty and thirty-five years old, of unexceptionable character.' The owner of a double Bath-chair may perhaps be warranted in describing it as 'capable of holding two persons in good condition;' but that a mail phaeton was ever 'the property of a gentleman with a movable head as good as new,' is more than we can credit. A certain excellent young horse that 'would suit any timid lady or gentleman with a long silver tail,' must assuredly hail from the stable of the Dublin horse-dealer who is open to an offer for a 'splendid gray horse, calculated for a charger, or would carry a lady with a switch tail.' A feminine switch would hardly be worth so much in Birmingham, where we read: 'Ladies will be sold as low as seven shillings a pair.' The sex would seem to be at a discount in the foregoing town, and reduced

to taking up with each other, for a householder offers to let apartments to 'two women, married couple.' Women have married women before now, and the *Matrimonial News* once notified: 'A handsome young lady of twenty-one, educated, accomplished, and of good family, desires to marry some lady going out to India.'

The following unsophisticated productions, selected partly from a *History of Advertising*, written by Mr Sampson, and from other sources, may prove amusing. From a Spanish paper is gathered the following: 'This morning our Saviour summoned away the jeweller, Siebald Illmaga, from his shop to another and a better world. The undersigned, his widow, will weep upon his tomb, as will also his two daughters, Hild and Emma, the former of whom is married, and the latter is open to an offer. The funeral will take place to-morrow. — His disconsolate widow, VIRONIQUE ILLMAGA. P.S. — This bereavement will not interrupt our employment, which will be carried on as usual; only our place of business will be removed from No. 3 Lessi de Leinturiers to No. 4 Rue de Missionaire, as our grasping landlord has raised our rent.' It is impossible to avoid admiring the adroitness with which the disconsolate widow continues mourning and money-making, and takes the opportunity of giving a rap at the heartless landlord.

Ireland has the honour of the next production, unsurpassable as it is for delicious pomposity. It is only fair, however, to add that it made its appearance at the beginning of the present century, before examinations for schools and schoolmasters were fashionable.

'Mr Hendrick's devoir to the gentry of Limerick. Would be elated to assign his attention for the instruction of eight or ten pupils, to attend on their houses every second day, to teach the French language, Geography on the Principles of Astronomy, traversing the globe by sea or land on the rudiments of a right angle, with a variety of pleasing Problems, attached to Manners, Customs, &c. of different Countries, Trade, and Commerce; Phenomenons on Volcanos, Thunder, Lightning, Sound, &c. Such as please to continue may advance through a Course of Natural Philosophy, and those proficient in French may be taught the above in that Language.

'N.B.—At intervals would instruct in the Italian Language.—J. HENDRICK, *Philomathos*.'

A mayor of one of the university towns immortalised himself by the following:

'Whereas, a Multiplicity of Dangers are often incurred by Damage of outrageous accidents by Fire, we whose Names are undersigned, have thought proper that the Benefit of an Engine bought by us, for the better extinguishing of which, by the Accidents of Almighty God may unto us happen to make a Rate to gather Benevolence for the better propagating of such useful Instruments.' Perhaps some clever undergraduate may recognise the style, and be able to decide whether Light or Dark Blue has the honour of such a literary genius.

The following warning against indiscriminate charity appeared in 1804, and it is an undoubted fact that though such claims may not in the present day be so publicly advertised, they are yet considered strictly personal property: 'To be disposed of for the benefit of the poor widow a

Blind Man's Walk in a charitable neighbourhood, the comings in between twenty-five and twenty-six shillings a week, with a dog well drilled, and a staff in good repair. A handsome premium will be expected.'

While small-pox was making extensive ravages some years ago, a Frenchwoman thus advertised: 'Madame XX. permits herself to say that she has pearl-white skin, full health, rosy cheeks, sweetly expressive face, blue eyes, black hair, and a coquettish figure. She will be vaccinated next Friday; and in as short a time as possible the lymph of her arm will be ready for any one desiring a purely healthful vaccination.'

Which is the greater rogue, the cheat or the man who supplies him with the means of cheating? The law, we know, deals more severely with the coiner than with the passer of base money; but although 'confidence'-tricksters occasionally come to grief, we never hear of the manufacturers of their stock-in-trade Bank of Elegance notes and Hanoverian sovereigns being brought to book; while to deal in endless kinds of shams, labelled as the genuine article, is apparently held legitimate trading. We are ashamed of nothing nowadays. A practical distiller lets all the world know that having succeeded, after seventeen years' experimenting, in producing a fair port and sherry without a drop of the grape-juice, he wants a partner with two or three thousand pounds, to establish a house in Hamburg for the manufacture of wines. A Chicago tradesman advertises that he keeps on hand every article known to the sporting fraternity, and used by them to win with in games of chance; and a Boston firm is prepared to supply all comers with 'A sure thing,' in the shape of a new method of marking playing-cards, 'which enables a person to read the cards as easily by the backs as the faces and defies detection.'

Shakspeare complained that too many women

Put on nature's power,

Fairing the foul with art's false borrowed face;

and the sex are not less guilty now. Men may well doubt if beauty is even skin deep, when they see a good complexion is to be bought for a shilling; artificial eyebrows for a guinea a pair; tails of hair, as twists or plaits, or to add to the fullness of a scanty head of hair, to be had for ten shillings; and long curls for a crown apiece; while a very moderate sum will purchase an 'ideal corset,' guaranteed 'to impart any degree of fullness to slim figures, while reducing the waist with that roundness which is the great beauty of a good figure.' Even dames of the fair, fat, and forty type may hopefully enter the lists against their more sylph-like sisters, at the cost of a trip to Paris, and a call on Madame H—, who 'has the secret of fairy-like elegance. In spite of nature, the customers she dresses seem to float in the air, and day by day her scissors perform prodigies of art. The shoulders emerge from the corsage, the shape becomes as fine and slender as the stem of a lily, and the arms acquire an adorable curve. But such a dressmaker, you will say, must set a high value on her services. By no means. The modesty of her charges attests the modesty of her character. Judge for yourself. She composes an adorable ball-dress for a hundred francs, and she lives at No. 76, in the Boulevard —.'

As a specimen of what we may term 'ornate

style,' a certain Northumbrian auctioneer announced for sale: 'A quaint mansion and appurtenances, draped in the foliage of its stately pines, its ornate lakes abounding with trout, and decoying the wild-duck to the fowling-piece, wrapped in sylvan beauties, and imparting a dignified air to the amplitude of its lawns and finely timbered park, presenting a *tout ensemble* of a country-seat, highly expressive of the agreeable silence and soothing indolence of a rural retirement.' Then, after babbling eloquently of 'meads watered by a bosky trout-stream, and selvaged by sloping woods and birchen braes;' of 'a rookery lending a bari-tone to the soprano of the mavis and the merle, in grove and in glade, in sequestered dell and breezy upland,' he condescended to come to more prosaic matters, and tell those concerned that the property was rich in 'the élite of winged game,' thanks to its 'populous nurseries of pheasant and partridge;' winding up with a bit of fine writing worthy of Robins himself, who never beat this: 'Pastoral in complexion, the stock-farmer has here a choice field for the exercise of his favourite pursuits. Over these well-fenced and skilfully sheltered estates, the patriot in his benevolence of multiplying blades of grass has ready command of the Wendale lime at the contiguous depôt of Rowley station. Intersected by never-failing streams of pure water, hydraulics might here neutralise the aridity of periodical droughts.'

This worthy would have been better appreciated in America, where sounding phrases and big words are much in favour. There Dolliver the tent-maker boasts that the tented field displays his handiwork, while his canopies shield bridal parties, and regally-attired dames and demoiselles, from the gaze of the vulgar crowd, as they alight from their chariots and pass into the halls of festivity.

We have seldom come across an English advertisement in any way resembling the following Yankee sketch of 'Mr Diogenes:': 'This singular man,' we are informed by the advertiser, 'lived in Greece. He was distinguished for his eccentricities, bad manners, and bad disposition. It was his chief business to find fault. For example, he took a lantern one day, when the sun was shining brightly, and went out to search for an honest man, thereby insinuating that such persons were exceedingly rare. When Alexander, a distinguished military gentleman, paid him a visit, and inquired what he could do for him, he had the impudence to tell him to get out of his sunshine. To cap the climax of his oddities, he dressed like a beggar, and lived in a tub! He was a sour, crabbed, crusty, old bachelor. We infer that he had no wife; first, because history does not mention her; second, because no woman could take kindly to one of his habits, dress, or manners, or aspire to become mistress of his mansion. There was an old woman who lived in a shoe; but the woman who would live in a tub, especially with such a companion, has not been heard from. The misanthropical spirit which possessed this man was doubtless due to disordered digestion and biliousness, one of the prominent symptoms of which is a morose, fault-finding disposition. Unfortunately' (and here comes the gist of the advertisement) 'Mr Diogenes lived several centuries before Dr P—'s Pleasant Pellets were invented; a few doses of which would have enabled him to find

scores of honest men without his lantern. Under their magic influence, he might have been led to take a more cheerful view of life, to exchange his tub for a decent habitation, to spruce up in personal appearance, and have taken a wife to mend his clothes and his manners; and become the happy sire of little Diogeneses, who would have handed down to posterity the name, not of a cynic philosopher, but of a cheerful, healthy, happy, virtuous man!

Our friends across the water conduct their advertisements in their usual go-ahead style. Not content with posters and newspaper publicity, for miles along the country roads the fences are painted over with the names of quack medicines, and the rocks give their 'testimony' in a clear and unmistakable way that would have astonished Hugh Miller. The vein of drollery with which the Americans are so richly endowed never gives its owner more satisfaction than when managing at one and the same time to puff his own goods and hint a flaw in those of his neighbours. For instance, the fences on the road between Troy and Albany were painted over every few yards with the name 'Castoria' (a preparation of Castor-oil), varied by, 'Castoria is nice,' and 'Castoria would cure a mad Buffalo.' A far-seeing firm engaged in the 'statuary line' seized the golden opportunity, and added: 'When it kills, buy your monuments at Bacon's.'

'Take vinegar bitters, and be happy,' was another piece of advice freely bestowed. 'Port-wine pure as the tears that fall on a sister's grave,' was well known; while 'Those who buy their tombstones of us look with pride and satisfaction at the graves of their friends,' is a remark that lingers in the memory. Our American cousins are slightly deficient in that reverence for 'grave' subjects that characterises the English, and indeed frequently choose them. 'Use Jones's bottled ale if you would keep out of here,' was painted by a grocer on the wall of a graveyard; and undertakers frequently laud their goods in a way that jars upon people not in 'the trade.' The beauties of 'let-down caskets [coffins] luxuriously quilted with white satin,' are frequently dilated upon; and one upholstery firm advertises:

Their parlour furniture is elegant.
 Their bedroom furniture is rich.
 Their mattresses downy.
 Their coffins comfortable.

The last specimen we shall offer to the reader has produced many a hearty laugh, and was presented to the writer as quite unique in its way. It runs thus, and is the production of one 'Roger Giles,' of Romford, Essex: 'ROGER GILES, Imperceptible Penetrator, Surgin, Paroch Clarke, &c. &c. Romford, Essex, hinforms Ladis and Gentlemen that he cuts their teeth and draws corns without waiten a moment. Blisturs on the lowest turns, and fysicks at a penny a peace. Sells god-fathers cordial and strap-ile, and undertakes to keep any Ladis nales by the year, and so on. Young Ladis and Gentlemen tort the heart of rideing, and the gramer language in the natest manner, also grate Kare takein to himprove there morals and spelling, sarm singing and whisseling. Teaches the jewsarp, and instructs young Ladis on the gar-tar, and plays the ho-boy. Shotish, poker and all other ruls tort, at home and abroad. Per-

fumery in all its branches. Sells all sorts of stashionary, barth bricks and all other sorts of sweatmeats, including bees wax postage stamps and lusifers; likewise tatur, roobub, sossages, and other garden stuffs; also fruits, such as hardbake, inguns, toothpicks, ile and tin ware, and other eatables. Sarve, treacle, winegar, and all other hardware. Further in particular, he has laid in a stock of tripe, china, epsom salts, lollipops, and other pickels, such as oysters, apples, and table beer, also silks, satins, and hearthstones, and all kinds of kimistry, including waxdolls, razors, dutch cloks, and gridirons, and new laid eggs evry day by me Roger Giles. P.S.—I lectures on jogrefy.'

THE GOLDEN CROWN.

A FEW years ago I was advised by my physicians to try the effect of the waters at that beautiful place in Germany, Spa. The noise, the gaiety, and the constant fêtes were, however, not in unison with my spirits, and produced so enervating a result that, instead of curing me, I gradually became worse. I therefore sought a calm, country retirement, where I could enjoy nature's loveliness, and make excursions to the villages in the neighbourhood.

On one bright day I was strolling through the hamlet of Walberg, where the small population of two or three hundred inhabitants were holding their annual feast. A level, hard piece of ground, with no other roof than the blue sky, surrounded by wooden benches, served for a ball-room. Dancing needed no midnight excitement, for it began at two o'clock and ended with the departing daylight. Tall, robust girls, in holiday costume, fitting subjects for the pencil of Rubens; and young men with cheerful faces, were looking earnestly in one direction, where I could discern nothing but a deep sandy road, unshaded by trees. A murmur of impatience was heard through the confused sound of voices.

'Who are they expecting?' I asked of an old matron seated at the end of a bench.

'Eh, parbleu, they are waiting for the dear old Father. He is always so exact, and the children would have been dancing by this time had he not been delayed.'

I understood then that she was speaking of the village fiddler, and remarked a sort of dais raised within the circle. It was composed of a board laid on two barrels, and the chair placed on it seemed ashamed of its solitude; an old desk stood before, to hold the music. Soon a joyous hurrah came from the peasants, and I perceived a poor old man, hobbling painfully through the dust. His head was nearly bald; but its form was massive, and the face was still handsome. He appeared to be about eighty, yet his eye still retained the softened reflection of its youthful fire. His smile was all goodness as he affectionately pressed the hands of the young ones who gathered round him.

A country minstrel seldom pleases the refined taste, and to escape from the noise and intense

heat, I turned away to a small group of beeches, and began to read the book which was my constant companion. Presently I heard sounds so soft, penetrating, and sweet, that the memory of them will never be effaced. It was one of Weber's waltzes executed by a master's hand on an excellent violin. I rose to return as if by magnetic attraction, and walked beside two peasants who were on their way to the feast.

I remarked: 'It is impossible to waltz to a tune played so slowly.'

'You are right,' replied the young man; 'but in the intervals of the country-dances we often ask the old Father to play us some of his airs, and he never refuses. Ah! sir, they move us to the heart just as we shake the grain under the flail; there are some of our girls who cannot help weeping as they listen.'

I hastened forwards, and was soon below the desk. 'Friend,' I said, without preamble, 'you are a great musician.'

'I was so a long time ago, sir, or at least they flattered me by saying so; but now the airs that I play to these good people are only the remembrances of youthful follies.'

'Noble follies that I wish I had committed,' replied I to this singular old man. 'Will you favour me with your company at breakfast to-morrow morning at the house where I am staying?'

'A thousand thanks; but I never take a meal out of my own house; it is an old man's fancy. I ought to be as proud as a young man is, at eighty-two years of age. But I perceive that you are a musician; so we are brothers. If you will extend your walk to the little village of Hoth, over the flowery turf, you will hear the birds singing in the branches, which is far finer than Weber's waltz, and when you reach my home I will give you fresh eggs and water from the hills.'

'To-morrow I will come,' said I, pressing the old man cordially by the hand, more pleased with the invitation than if it had been to one of the grandest châteaux.

Ten o'clock on the following day found me before a detached cottage, clean, small, and pleasantly shaded, beside a running stream. The old man came to meet me, and his table was spread with the best fare he could provide. When I asked him about his name, he said: 'Sir, the peasants have given me the name of the Father, because as you can guess I am still cheerful in old age, but my real name is Vrangél.'

'Vrangél!' I cried, 'of Munich?'

'Yes,' he answered simply.

'The teacher of Weber, the chapel-master to the king of Bavaria!'

'Why not?'

'The illustrious Vrangél now changed to a village minstrel?'

'By my own choice, dear sir, which proves to you that Vrangél is a Christian philosopher. Music has been the passion of my life; but it has caused me unspeakable sorrow and disappointment. I was the king's professor, and he loaded me with money and honours. I taught the noblest women in my country, and they paid for their lessons with gold. I have given my children and grandchildren a love for the best music, the feeling which makes it eloquent, the science which gives it correctness. Thus I know that my life has not been useless; I

have gained the greatest prize, which I would not exchange for anything that earth can offer.'

'And what is this prize?' I asked.

'Come with me,' said the old man, leading the way to another apartment.

I entered a very small, whitewashed room, where a walnut-wood bed concealed by curtains filled up a space. He drew these back, and I saw a golden crown of laurel in a frame. Beneath was written: 'To my friend and excellent professor, Vrangél.—WEBER.'

'Sir,' said the old man with trembling voice, 'this is the crown that all the Bavarian composers sent to Weber after they had heard *Der Frieschütz*, the finest of his works.'

'From that time,' added he, 'everything was against me. I lost my wife and the youngest of my sons. The envy of others was the cause of my dismissal from my post as chapel-master. A banker in whose hands I had placed my savings was made a bankrupt, and my friends deserted me. Life became a weariness, a sadness impossible to describe seized upon me; the doctors ordered me to try the country air and quietness. I engaged a house near Spa, but the bustle of the visitors reached me. Walking through the secluded lanes I found this hamlet, where there are only forty or fifty honest labourers, and bought a cottage. I love to see the young people dance to my music; they do not pay me with money, but they never forget to shew their gratitude by sending me poultry, eggs, and milk. I angle in the stream when I fancy fish for dinner; and I can walk four leagues without weariness to any of the seven villages, when I am sent for to play my violin at marriages, baptisms, and feasts.'

'But,' I said to this singular old man, 'how can a man of your intellectual powers, and accustomed to society for so long a time, deprive himself of all the pleasures of thought, of progress, of mental advancement?'

'My good friend,' he replied, 'everything in society is changed—men, things, and ideas. What was once considered as the enjoyment of luxury, permitted only to those who possess large fortunes, has now become an imperious necessity to every class. The vanity which is grafted into envy grows so rapidly in the field of the human heart, that the good seed is choked. Each for himself, that gospel of egotism, is the universal religion. From the workman up to the capitalist, every one practises it. Villages which are far from these commercial centres have not yet yielded to this plague. But it will advance and invade them; though I shall have gone to my rest before that occurs. Our peasants love their wives, their children, and their fields; but they never covet your horse, your house, or your servant. They have just opinions, sincere friendships, true joys, and simple feelings. I admire their ignorance more than modern philosophy, and I am happier among these rustics who love me, than I should be in drawing-rooms where they would ridicule me.'

Our conversation was carried on for a long time, and I promised to come and see him the following year. I did so; but only to find the door closed. The pigeons were no longer on the roof; no dog barked a friendly welcome. An old woman I met told me that the musician had died the previous February. All the villagers around had wept over his tomb. When his will was opened, it was found

that he had bequeathed three thousand francs to each of the villages; his furniture to the old woman who waited on him; and his much prized possession, the crown of Weber, to the city of Munich. This was all he possessed.

SOME NOTES ON DREAMING.

Few subjects have been oftener written upon than that of dreams and dreaming; yet, frequently as the theme has been treated, it is of that sort which never seems to lose interest for the generality of persons. No doubt the subject is a vague and to a considerable extent an unsatisfactory one—one upon which you may talk and write a very long time, and at the end be not much wiser than you were at the beginning. But as long as people dream they will continue to talk about their dreams, just as mankind will continue to talk about the weather so long as there is rain and sunshine, heat and cold; and not only to talk about but to be more or less curious concerning them. We have no wish to speak about dreams either from a psychological or any other aspect. What it is proposed to do is to record a few facts and observations, with the preface that the greater portion of what follows either came under the writer's own experience, or was related to him by friends as having happened to themselves. Upon this fact indeed depends altogether whatever interest these notes may possess.

The following shews how a dream may be true and yet not true, in a curious way. It was lately told to the writer by one secondarily connected with the circumstances. The narrator occupied lodgings in Edinburgh in company with a friend at the time of the occurrence. One morning, during the winter before last, his fellow-lodger said to my informant: 'I had a curious dream about John Fleming last night. I dreamt he was drowned while skating on Dunsappie Loch. I haven't been able to get the thing out of my head. The loch will be bearing to-day. Supposing we walk over after office hours and see the skating?'

The two young men took their way in the afternoon to Dunsappie Loch. There, sure enough, among the skaters was their friend John Fleming. Portions of the ice were in but an indifferent state for skating, and the two young men, who were not themselves skaters, warned their friend off the dangerous ground. But the skater made somewhat light of their fears, and shewed himself more bold and venturesome than was quite judicious in the circumstances. However, no mischance befell; the skater finished his sport unscathed; and the dreamer of the dream and his companion—my informant—the former a good deal relieved in mind, returned home. While the dreamer was looking over the *Scotsman* next morning, one of the first things his eye fell upon was a paragraph recounting the death on the previous day of a young man named John Fleming, who had been drowned while skating. It was of course some other John Fleming—another young man of the same name.

In the above, though I have changed the name of the chief actor, the circumstances happened as here set down; the form in which they were narrated to me by one in whose good faith I have implicit trust. Some may regard this as a more curious result of the dream than if the friend of the dreamer had been drowned. It would almost seem to shew that dreams may make mistakes in the sense of going astray and visiting the wrong people.

It is not a very rare thing to meet persons who have had, or believe they have had, dreams that were subsequently verified. In relating the following, therefore, the writer hopes not to be regarded as unusually superstitious or credulous. The circumstance occurred not a few years ago, but a very distinct recollection of it is still retained. On entering college-life I parted from a friend who had been to me, in school-boy phrase, a chum, and whom for some years I had been used to meet frequently. My school-fellow—for whom the name of Fred Smith will serve as well as another—on quitting school entered the office of a brother who practised as a solicitor in a country town some hundred miles distant from the city in which Fred had up to that time resided, and in which I continued to live. For two years my friend was absent from the capital, during which time he and I—chums as we had been—ceased to correspond after the first letter or two, both being, like the majority of young fellows, careless and remiss about such things. New interests and new occupations no doubt came to fill and engross the thoughts of my school-fellow, as they did mine; and in my case, to say truth, Fred Smith ceased to bulk much in my memory.

One night I dreamt that I met Fred at a certain corner in town where two of the principal streets in the city met and crossed. The dream was a very vivid one. My school-fellow crossed the street from the other side to meet and greet me; his hand grasped mine, and his voice rang in my ears in the old hearty fashion. He had grown greatly, had shot up into a tall and, it struck me, somewhat angular youth, and his upper lip and chin were yellowing with the down of callow manhood. Next morning on going into town as usual, the first person I met with whom I was acquainted was Fred Smith, exactly at the spot indicated in my dream. He crossed the street to accost me, looking precisely as in my dream, tall and angular, with an incipient beard on his chin, which when we last met had been as smooth as a lady's. He had come to town on the previous night.

A well-known and esteemed Edinburgh advocate, now dead, used sometimes to relate the following. While at school, one of the studies in which he was most successful was mathematics. During the last sessions of his school-life he was trying hard for one of the mathematical prizes. Another youth and himself were running a neck-and-neck race for the coveted honour. On regularly recurring days the boys in the class were set problems to work in a given time. Each of the rivals had done all the exercises correctly up till almost the end of the term. At length our boy was fairly baffled by one problem—the last that was required to be done. By no amount of labour and pains could he succeed in solving it. On the evening before the day on which the

exercises were to be given in, he had puzzled at the obdurate problem late into the night. At last, still completely baffled, and mentally and bodily wearied by his long work, he gave way, boy-like, to a flood of tears of vexation and mortification, and in this state went to bed. During the night he dreamt that he was again engaged in solving the problem, and that he worked it out rapidly and easily to what he felt sure was the correct result. Then a deep and dreamless slumber succeeded, which lasted till morning. When the boy rose, instead of there remaining to him only a confused recollection of having dreamt about working at the problem, he sat down, and there and then solved the exercise without the slightest difficulty. The sequel to the story was, I think, that the two boys were bracketed equal, and that each therefore received a prize.

It is not of course an uncommon thing, as we have on more than one occasion noted in these pages, for persons to have dreams of this character—for the poet to dream verses—the novelist plots and situations—the barrister causes—the mathematician problems—but it is very rarely that these dreams are of any practical service to the dreamers. They vanish with the waking, leaving only a vague and incongruous memory. We have all heard persons relate how they have successfully wrought out in their sleep some piece of work that has been exercising their mental faculties all day; but the above is one of the few instances the present writer has ever known of a dream of this nature resulting thus practically.

There are, however, historical examples of the same kind—one of which relates to the poet Campbell, and is not, I think, very widely known. While Campbell was engaged in composing *Lochiel's Warning*, he became perplexed as to how he should best put into rhythmical shape an idea which was working in his brain. He had been striving a whole day to find adequate expression for his thought, but night found him still unsatisfied. It will be remembered by readers that Campbell was fastidious and difficult to please in regard to niceties of language. With his mind still running in the same groove, he went to bed and fell asleep. While he slept, the idea flashed through his brain clothed in fitting and adequate words. He started up in bed, suddenly wide awake, rose, struck a light, sat down at a table, and instantly wrote the well-known couplet:

'Tis the sunset of life gives me mystical lore,
And events to come cast their shadows before.

The poet then went to sleep again. In the morning he made a single alteration in the couplet, writing for 'events to come,' 'coming events,' the shape in which of course the lines appeared in the completed poem.

One word may be offered in the way of reply to and possible explanation of the question frequently asked: 'How is it that dreams do really sometimes come true?' The answer that has been suggested—and it seems a by no means unsatisfactory one—is, that considering the myriads of dreams that do not come true, it would be rather wonderful than otherwise if occasionally one were not verified. It is the same method of explanation which has been applied to the familiar phenomenon of people appearing who have the moment before been in your thoughts, or of whom you have been actu-

ally speaking to some third person—a coincidence common enough to have long since become embodied in a proverb. The proposed solution of the phenomenon is, we think, equally legitimate in both cases.

TWENTY-FIVE DEGREES BELOW ZERO ON LAKE WINNIPEG.

THE following account of the sufferings of two persons, who by accident were separated from a party engaged in laying out and constructing the Canada Pacific Railway in Manitoba, goes to prove what has frequently been advanced on the subject of human endurance in these northerly latitudes. One of the men was a Scotchman, aged about twenty-three; and the other an Indian boy, about eighteen years of age. The story was told by the eldest of the sufferers in the simplest and most truthful manner, and was elicited by the question asked of my young friend: 'Jem, when can you let me have the old family watch I lent you, and where is it now?' (The watch in question was an old-fashioned, thoroughly reliable silver one.)

'As to when I can return the watch,' answered my friend, 'there may be some doubts; but as to where the watch is at this present moment, I imagine there can be but little doubt. The watch at this moment is, as nearly as I can tell you, at the bottom of Lake Winnipeg, about five miles from the shore, in company with my father's compass; both articles having been lost in the lake in the middle of the night through an ice-crack, during one of my journeys with a provision dog-train across the lake; and I assure you it will be many a year before I forget that night and the frightful position I was in.'

'Tell me all about it, Jem,' I said. 'If I lose my watch, do not let me lose the story of it too.'

'I left the station,' said Jem, 'when I had got the dog-train load of provisions, on the afternoon of the 20th January 1878. The weather was clear and fine, but extremely cold, the thermometer registering nearly twenty-five degrees below zero. There was, however, no wind, and the cold was quite endurable. Both myself and the Indian boy were dressed in our ordinary clothes, mufflers, and overcoats, with snow-shoes on the train for use as wanted. We could not walk in fur-coats, and had therefore concluded to leave these behind, for the dogs were fully loaded with the provisions. Our course lay through the timber that skirted the southern part of the lake, and was consequently quite sheltered; and as we had to return on foot to the station within a day or two without the dog-train, all unnecessary wraps were left behind, not liking to be too heavily loaded on our homeward tramp. Provisions at our camp on the railway having quite run out the day previous, we were desired to lose no time in loading up and starting on our lonely journey. The distance we had to travel was about thirty miles; and if the weather kept fine, we calculated we could easily do this by the evening of the following day. We intended to camp for a few hours at a certain spot about twelve miles from our starting-point, so that we had daylight sufficient to reach that place. The moon would rise about eleven o'clock, when we could again move

on, as moonlight in these northern latitudes is most brilliant and clear.

'Our friends in the old country and in the civilised part of Ontario would think such a journey, with the thermometer at twenty-five degrees below zero, and made at night on foot, driving a dog provision-train, would be a great hardship. We, however, thought nothing of it, and we take these things quite as a matter of course. In fact, I was thirteen months out surveying on the line of the new Pacific Railway without once sleeping in a proper bed or a regularly built house. We always camped under canvas, with bark and evergreen brush as a screen from the wind and snow. No pillow, except perhaps a knapsack or two or three pairs of boots tied up, a blanket and buffalo skins rolled round us individually, with evergreen brush on the ground, constituting our bedding. I was never in better health than during the time I was so primitively lodged. Of course we lived principally on pemmican and pork, and sometimes we consumed huge quantities of these strengthening and cold-repelling provisions.

'Our course lay, as I before stated, through the timber that skirted the southern part of Lake Winnipeg; but as we proceeded we found the swampy inlets were not frozen so entirely solid as to make travelling over them very advisable. This partial freezing—or rather partial thawing—is caused by the warmer spring-water continually welling up in such positions; and from this reason we determined to strike directly across that portion of the lake that lay in our route. We knew that the ice out in the open space would bear an elephant; and moreover, there was less snow on the ice than in the timbered shore, and from the snow being frozen the travelling was much better. The night being quite calm, although dark at the time we reached the shore, we finally decided to adopt the above course. I had my compass and plenty of matches, so that if I thought we were deviating from our course, I could correct it by striking a match and examining my compass. Before leaving the timber, however, we carefully examined the sky all round the horizon so far as we could see, to ascertain the certainty of there being no chance of a snow-storm. We had about twelve miles to travel on the ice before we reached the point we desired to approach. The Indian boy shook his head at the proposition to cross the ice at night, especially as we had heard wolves howling in our rear; and we knew that if they struck our dog-trail, they would in all probability follow it after us. I had my revolvers, and the fourteen chambers loaded; consequently, I did not apprehend much danger from wolves, unless they followed us in great numbers.

'All things considered, we determined to push on; and after five miles of excellent travelling, we were congratulating ourselves on the choice we had made, and had stopped a moment to strike a match and determine the correctness of our present course. The dogs were a few yards ahead, and we noticed by the glare of the burning match, that they were apparently jumping or moving in a different manner from their usual mode of travel. I threw down the match, and we both hurried after them, thinking they might intend running away. (Dogs are never driven with check reins.) The glare of the lighted match pre-

vented our perceiving that a crack had formed in the ice about two feet wide, and it was over this crack, covered with thin ice, that the dogs had apparently leaped. (The dog-trains were of sufficient length to cross the crack without falling in or upsetting.) The sagacious brutes were not to be deceived by thin ice, nor should we have been but for the blinding glare of the match. I had both the compass and watch in my hand; and as we accelerated our pace to overtake the dogs, down we both went through the thin ice into the water; both compass and watch flew out of my hands into the water, and of course at once sunk; and we were only saved from the same fate by throwing out our arms and catching the edge of the solid ice. We were wet up to the armpits, but soon scrambled out. Our dogs stopped when we fell in, looking back at us as much as to say: "Why did you not jump as we did?" Of course their instinct not having guided us, we were not much the better for the apparently mute inquiry.'

(*Note.*—These cracks in the ice of the Canadian lakes are problems which have never been solved; they differ in width in different situations; but always keep open, and are most dangerous to sledge-travelling.)

'Our position was now terrible in the extreme. We were wet through, with the thermometer at twenty-five degrees below zero. We knew we were five or six miles from the shore, even at the nearest point; and to add to our difficulty, we had not observed in which direction the crack ran. There was no moon, and would not be for several hours; we had completely lost our "polarity," and did not know which way to go. The sky had clouded over since sundown, and we could not even see the north star. Our clothes froze stiff in five minutes, and we began to feel that our hours were numbered. As you are well aware, I could always bear exposure; but my Indian's teeth chattered like a pair of castanets. After a few moments' delay and indecision, we concluded at anyrate to keep moving, and accordingly started forward at a jog-trot. We knew nothing as to the direction we were going in, and might be moving towards the centre of the lake and towards open water. We cheered on the dogs, and hoped they would prove wiser than ourselves, and that their instinct would lead them towards the land.

'After about an hour's travel and terrible sufferings, we struck a very small islet, not more than half a quarter of an acre in extent. It was only about two feet above the water's edge, and quite destitute of timber except some dead and partly dried willows. Of course this islet was also covered with snow, and but for the sagacity of the dogs, we never should have seen it. We soon had the dogs unharnessed, and a fire made of the dead willows. It was certain death to fail now; stiff and sore as we were, we knew our only hope lay in getting warm again. We pulled off our wet clothes, dried them as well as we could in the flame and smoke of the fire, and partially dried our under-flannels, first allowing them to freeze hard, and shaking them well when frozen. A great deal of moisture was thus got rid of; and after again dressing ourselves, we began to have a little sensation of warmth. We ate heartily of our cold provisions, and fed the dogs; and our fuel being by this time quite exhausted, and

the greater part of the night yet to get over, we spread all available medium between us and the snow, using some willows first; and calling the dogs, we all—canine and human—curled ourselves into the smallest possible space, with two dogs before and two behind each of us, and our blankets over all, so arranged as to keep in every particle of animal heat. We soon fell fast asleep, with a feeling of comparative comfort I never expected to feel again. As I expected, the wolves followed up our trail, and were howling round us all the rest of that terrible night; but we took no notice of such minor troubles as being eaten by wolves. It seemed to be almost a luxurious death in comparison with the awful feeling of being frozen stiff and solid on Lake Winnipeg, with the thermometer twenty-five degrees below zero.

'Morning came at last, and we with difficulty got under weigh once more; but now we knew the direction in which to travel; and at about eleven A.M. we arrived all safe at our destination.

'My skin was badly chafed, from the effect of the frozen clothing, otherwise I took but little harm from the experience. I suppose that heavy fat-meat diet enabled me to bear hardship that would have killed a vegetarian in half an hour. How the instinct of the dogs enabled them to hit on the small islet, I am at a loss to imagine; and how human nature ever endured what we had to bear that night, would seem beyond comprehension to an inhabitant of cities and heated houses; but the facts are as I have related them; and that was how I lost your old family watch.'

THE MONTH. SCIENCE AND ARTS.

THE Long Vacation as usual has brought opportunity for sayings and doings, for discussion of questions, and ventilation of grievances, which at other times are lost in the crowd or treated with indifference. If the First Lord of the Admiralty speaks on education during the holidays, and says he does not 'advocate the piling of subject upon subject, the straining after what appears to him an unattainable standard of excellence, the pushing and driving of children from one subject to another;' and when he suggests that the aim of schooling should be to train up a child 'to be a good father, a good man; more useful, stronger, more vigorous, and more self-reliant than without that schooling,' then people listen to him. And if a learned and right-minded Professor ventures to intimate that acquirement (otherwise cram) is not knowledge, the intimation survives, and may be turned to profit by students when the holidays are over. And if scientific men say that the meeting of the British Association at Sheffield was not very successful, and talk about the great object-glass, the largest in the world, to be made in New England for the Russian Imperial Observatory at Pulkowa, they too find listeners. And the Royal Commission on Agriculture while publishing the list of subjects into which they intend to inquire, and announcing that they have sent competent men to the continent of Europe and the United States of America, to draw up Reports on the

agriculture of those countries, feel pretty sure that their utterances will not be wasted. And if the International Congress of Physicians, sitting at Amsterdam, decide in favour of compulsory vaccination, of Contagious Diseases Acts, the localisation of epidemics, and periodical examinations of the eyes of persons employed on railways, they anticipate at least tolerance for their decisions. And while in wine-growing countries there is a renewed outcry against the *Phylloxera vastatrix*, Mr J. Ball, the veteran Alpine traveller, publishes a dissertation on the *Origin of the Flora of the European Alps*, which will not fail of readers. And International Meteorology, which has been so praiseworthy promoted by the government at Washington, puts forth an exposition of its purposes, and not in vain, for there is 'no nation which is without interest in the work proposed to be based upon exchanged simultaneous Reports, and no nation has hitherto hesitated, when the subject has been properly presented, to aid in a duty which, so easily done as to require very little effort on the part of any one person, has for its object a good to mankind. The work cannot, from its nature, be for the selfish good of any section.' And is it not for the good of mankind that such grand steam-ships should be built as the *Orient*, of five thousand four hundred tons burden, with one rival only in respect of dimensions, and capable, as is anticipated, of making the voyage to Australia in thirty-six days?

The City and Guilds of London Institute for the Advancement of Technical Education, have published their programme for 1880, stating that they will afford facilities for carrying out an examination in certain specified subjects, wherever a class for instruction is formed, or a sufficient number of candidates present themselves. They offer money grants varying in amount to teachers, according to qualification and success in teaching. The subjects for examinations comprise Alkali manufacture, blow-pipe analysis, brewing, carriage-building, cloth and cotton manufacture, electro-metallurgy, manufacture of gas, glass, iron, lace, paper, silk, steel, sugar, goldsmiths' and silver-smiths' work, photography, pottery and porcelain, printing, tanning, telegraphy, watch-making, and other trades. Inquiries may be addressed to the Secretary of the Institute, Mercers' Hall, E.C. It is further worthy of record that the Guilds have endowed the chairs of Engineering and Mechanical and Chemical Technology in University College.

We have from time to time mentioned the experiments made on blast-furnace slag, with a view to apply it to useful purposes; and we are now informed by a technical Report that in certain important particulars the experiments have proved successful. In the neighbourhood of Middlesborough, extensive works are in active operation converting slag into sand, into shingle, into bricks and into 'wool,' or 'slag-cotton' as it is sometimes called, by very ingenious processes. The sand when mixed with a given quantity of lime is shaped into bricks at the rate of twelve thousand a day: these bricks do not require to be burned in a kiln, for they harden in the open air, are ready for use in less than two months, and are

well adapted for interior walls, as they do not split from the driving in of nails, and have a uniform surface. It is found too, that when properly mixed with other substances, slag is convertible into cement, concrete, and mortar. With another transformation, it appears as chimney-pieces, window-heads, balustrades, and other articles described as 'artificial stone' for the use of builders. And in the iron district of Northampton, the slag, after suitable treatment, is fashioned into glass bottles, green in natural colour, and remarkable for strength. If strong glass bottles can be made, why not glass railway-sleepers? It was stated at the meeting of the Iron and Steel Institute at Liverpool that the slag-glass could be toughened, and that on trial it had borne heavy weights without breaking. Should this be confirmed on further experiment, it will settle the question, and the cumbrous heaps of waste slag will be moulded into imperishable sleepers. The successes thus achieved are perhaps the beginning only of discoveries which may lead to further useful applications of this hitherto intractable material. Thereat will the dwellers in the iron districts rejoice, for, as we are told, blast-furnace slag accumulates to the extent of eight million tons a year. Students of technology could hardly employ their time better than in finding out profitable uses for the at present waste and useless heaps of manufacturers' refuse.

Some years ago, certain lead mines in Flintshire, extending many miles underground, were abandoned because of the great inflow of water. The improvements recently made in machinery for boring and tunnelling led to the formation of a project for the drainage of those mines, and we learn from an official source that an adit level which was driven at great cost by an ancestor of the present Duke of Westminster, is now in course of extension by the Diamond Rock Boring Company; and that in six months, a tunnel eight feet square has been driven three hundred and forty yards through hard limestone. At this rate, the time required to carry on the work to a distance of twelve miles may be calculated. To 'unwater' a large metalliferous district is a worthy task for modern enterprise, to which we wish success.

At the last meeting of the Royal Cornwall Polytechnic Society, a much improved rock-drill, described as the 'Eclipse,' was exhibited. The construction is simple; it is self-feeding, and may be worked either by steam or compressed air; and in the statement of its merits we remark that 'let the rock be hard or soft, or full of seams, whether the pressure be low or high, or whether the drill be fixed to any peculiar angle, and boring at the rate of two inches or twelve inches per minute, it does not affect the regularity and effective duty of the feed, and the perfect mechanical result of advancing the machine forward at precisely the rate of its progress into the rock.' Moreover, when once started, it 'may be left to complete the hole by its own action;' hence the man in charge may attend to two or perhaps three machines at the same time.

Messrs Jordan and Company point out that for quarrying or mining, hydraulic power is the most economical, and is to be found in the 'pump columns' of all deep mines. 'No deep mine,' they state, 'of any importance can be worked without pumps and a large pumping-engine; and this is

the source of power suggested. Therefore, in order to arrive at the cost of any power we may require for driving small hydraulic engines underground, we have only to determine the cost of pumping the quantity of water used through the head employed;' and they shew that the cost is much less than that of compressed air.

A prize offered for a method, mechanical or chemical, of making marketable, with commercial advantage, ores or minerals raised from mines in Cornwall or Devon, was gained by the Chudleigh Road (Devonshire) Patent Brick, Tile, and Pottery Company. Their vitreous pottery, made from clays hitherto considered worthless, occupied a deservedly high place among works of art exhibited at the meeting above referred to, and will probably compete for public favour with the now well-known Lambeth ware. The articles, whether bricks, tiles, jars, bottles, vases of various colours, are 'vitrified without any artificial admixture; while the burning, fixing the colour and enamel, are all done at one and the same time.' Not least among the merits of this novel manufacture is its economy; for the local land-owners and clay merchants had always regarded the top clays as useless, and in mining for the potter's clay found in that part of the county, had thrown them aside as waste and rubbish. 'Sanitary bricks' are made which withstand a crushing weight of three hundred and twenty tons to the square foot, and 'non-porous bricks' which effectually resist damp and the action of the strongest acids. In the production of these satisfactory results, the kiln, described as Carder's Patent Continuous Kiln, plays an important part. It contains 'a series of burning chambers, arranged in an oval ring, on the continuous principle, so that while the contents of some are being fired, others may be cooling, or filling, or being emptied, the distribution of the heat being governed by a series of dampers. The waste heat of the chambers which are cooling is either directed into the drying tunnels, or allowed to flow on towards the chamber in full fire, to supply it with heated oxygen. Day by day one chamber is filled, one drawn, and the fires are advanced a stage, until the whole circuit of the kiln has been made.' Meanwhile the process of drying is going on in the drying tunnels, the capabilities of the kiln being such 'that green bricks direct from the machines can be dried in the drying chambers or tunnels by the utilisation of the waste heat from the main flue, without the additional cost of fuel, labour, and separate buildings.' If these things can be done in Devonshire, why not in Cornwall, where waste clays are overabundant, and where people are disquieted because of hard times and waning trade?

A new machine-gun, named after its inventor, the Nordenfeldt, has been tried with a view to use in the navy, being specially intended to repel the attacks of torpedo boats. It has four barrels placed side by side, each of which discharges a bullet of about half a pound weight, that penetrates steel plates from three-quarters to one inch in thickness, at a distance of one hundred yards. The cartridges are made of gun-cotton, and are fired by means of electricity in a way not yet made known outside the official precinct. But it appears to be demonstrated that the Nordenfeldt will take a formidable place among destructive appliances.

Mr H. Wilde of Manchester, whose dynamo-electric machines have been noticed in these pages, has succeeded in lighting a ship by electricity, with results that seem to settle the question as regards practicability and completeness of effect. Any one who has been on board a vessel of war knows how dark and dismal, notwithstanding oil-lamps, the lower decks are: henceforth they will be as bright as day, and even brighter in gloomy weather, for Mr Wilde can now divide the working-current without difficulty, and introduce as many points of light as may be necessary. Instead of pairs of carbons separated by plaster of Paris, he coats the carbon separately with a film of hydrate of lime, and mounts them in couples in such a way that when the current is passing they stand at the proper distance apart for producing a perfect light. An experiment made on board the *Inflexible* may be taken as the commencement of a change which will very greatly mitigate the discomfort of life in an ironclad. Four of Mr Wilde's improved lamps were placed in one of the engine-rooms, and, according to the official Report, 'when lighted up, the effect was most startling: the opal shades gave off so powerful and brilliant an illumination that the engine-room, which is considerably below the water-line, appeared to be filled with daylight, and the moving parts of the engine were rendered visible.' Apart from the abundant light, there is the advantage that neither heat nor smoke is generated, a very important consideration within the narrow limits of a ship; and it is not surprising that the Lords of the Admiralty, in whose presence the experiment was made, 'were warm in their expressions of surprise and gratification.'

On the Nature of the Fur on the Tongue is the title of a paper by Mr Butlin, F.R.C.S., read before the Royal Society, in which it is shewn that the fur does not consist of epithelial cells, as generally supposed, but (1) of remains of food, and bubbles of mucus and saliva; (2) of epithelium; (3) of fungi, which attach themselves to the filiform papillae, are gray in colour, and, as Mr Butlin states, correspond in colour and appearance with the thin gray pellicle which forms upon the surface of bacterium-producing fluids. This pellicle when examined is seen to become whiter and more opaque as it becomes thicker, and the fur on the tongue behaves in a similar way with increase of thickness.

In order to ascertain the true nature of the fungus, Mr Butlin cultivated a small quantity from different tongues on a 'warm stage.' Free growth and development, he says, 'took place; but instead of the expected single fungus, several fungi were found. Only two forms, however, were present in every instance—namely, *Micrococcus* and *Bacillus*; and from a comparison of the natural fur with the results obtained by artificial cultivation, he has little doubt that the fur consists chiefly or essentially of these two fungi.'

Micrococcus developed itself in 'small spherical bodies, generally in pairs or groups of four, but often forming chains. Upon the warm stage, rapid multiplication took place, with the production of pairs, fours, long and short chains often twisted and looped, and small and large colonies. When these colonies reached a large size (which happened in the course of a few hours), they pre-

sented a granular appearance, and assumed a yellow or brownish-yellow colour, and all movement in them ceased.'

Bacillus, a rod-like growth, as its name indicates, moved actively about the field of the microscope, the rods forming short chains or pairs, but not forming colonies, though they sometimes congregated in large numbers in the *Micrococcus* colonies. In two instances, another kind, *Bacterium termo*, made its appearance, and 'developed with such rapidity that the whole of the fluid was crowded with these organisms to the exclusion of every other form.'

Mr Butlin is led to conclude from his observations, that while the two first-named fungi predominate, four other kinds are occasionally met with; and he remarks, 'the slime which exists around and between the teeth is composed of the same constituents as the fur on the tongue; all the organisms which are found in the one are found also in the other. *Bacillus subtilis* exists, however, in greater quantity in this tooth-slime, and the rods and filaments are usually much longer than in the fur, probably because they are not subjected to so much disturbance.'

The experimental cultivation on the 'warm stage,' allowing for local conditions, represents the growth of fur on the tongue. One conclusion is plain—namely, that cleansing of the mouth after every meal, as at the beginning and the end of the day, should not be neglected.

From facts and statements concerning the mouth, it is easy to pass to a question of food. Mr Ernest Hart writing in the *British Medical Review*, once more points out the 'extravagance of our people in their feeding, notably their extravagant excess in flesh-food, their ignorant neglect of nitrogenous vegetables and fish, and their carelessness and unskilful waste in cooking. The fallacy that meat alone can give strength for hard work, and beer alone give adequate stimulus to its digestion, are fallacies so deeply rooted, and which underlie so many extravagances and follies of the poor and the well-to-do, that a campaign against dietetic fallacies would be as patriotic as well-founded. The first step should be to lengthen our list of legumes, those immediately available being peas, beans of different kinds, including varieties from India, and rice and lentils; the second to introduce the pipkin and the stew-pot. Until the English housewife learns how wasteful is the roasting-jack, how costly the gridiron, and how unnecessary the "clear fire" and the blazing mass of coals, without which she can at present usually neither cook a cutlet nor boil a cup of coffee, the first lessons of household economy are still unknown to her.' Another writer declares that we have to overcome prejudice and learn to eat; that food is abundant and cheap, and might be cheaper if we were not the most backward people in Europe in the art of cookery. 'We are surrounded by water, yet fish is a luxury. We eat only one vegetable, except when we invade the domains of our cattle, and indulge in poorly cooked greens. Of peas, French beans, cauliflowers, and fruit, the majority of people are stinted, if not debarred. We complain of agricultural depression, chiefly or in great part because we have discovered that other nations can supply us with corn and beef cheaper than we can grow them ourselves; and yet we cannot get good fresh butter, pure milk,

new-laid eggs, and chickens, except at extravagant prices.

After all this, it may seem trivial to notice an improved nose-bag; but in behalf of horses we state that the improvement consists in dividing the bag, so that one-half hangs on each side of the head. The two halves are connected below with a perforated metal bowl or trough, into which the feed gradually descends. Special provision is made for breathing, and for the escape of hot air from the horse's nostrils while feeding: the food is always at one level, and can be eaten without any resting or tossing of the bag on the part of the horse.

EDUCATION BY POST.

In this *Journal* for 30th November 1878, a short notice was given of the system of *Education by Post* carried on by the Glasgow Association for the Higher Education of Women. Presuming that all our readers are interested in matters relating to education, we deem it desirable again to draw their attention to the movement, and to the extension of a scheme of which many have already taken advantage.

There is always a large class both of young men and young women in every grade of society who, after they have left school, desire to gain a clearer knowledge of the subjects there taught, and also to gain a knowledge of the higher subjects included in a university curriculum. Formerly, the only means by which such knowledge could be obtained by those whose sex or work in life shut them out from a university career, or even from the classes which sprang up in various places, was private study. The private student has two great difficulties to contend against. The first is, that the zeal is apt to be flitting, and the work consequently unmethodical. The next is, that even though there is perseverance and method, the student often gets up from the study of a subject with a head full of undigested facts, whose relations to each other have not been clearly thought out. The object which the Association has in view is to meet these difficulties, to stimulate the efforts of those who are seeking knowledge, and to help them to systematise their thoughts. With this object, tutors of acknowledged ability have been appointed for the various subjects. Before the opening of the session, plans of study, giving the subject of each paper, are prepared by them, and a copy is sent to the pupil. During the course of the session, examination papers are posted every fortnight, the answers to which are returned to the tutors, who correct and criticise them and explain any difficulties that may occur. The benefit to be derived from being thus educated to write clear and connected answers to the questions, can hardly be over-estimated.

In preparing the papers, the tutors have always in view the necessity of keeping the questions within the range of a mixed class of students. They also aim at drawing up the questions in such a form as to suggest a wide relation of facts, and thus force the pupil to think about them. The subjects of study being the same as those chosen by the Glasgow University examiners, the pupils are prepared for, and can if they choose present themselves at, the Local Examinations.

The high place taken by many of the 'corre-

spondence' pupils of this and similar Associations is a gratifying proof of the efficiency of a scheme which, beginning with the preliminary course of grammar, geography, history, and arithmetic, is adapted to the wants of those whose early education, from one cause or other, may have been stunted or interrupted; which provides the opportunity of carrying on the study of a wide range of subjects in remoter districts where instruction is not otherwise easily obtained; and which prepares students not only for the ordinary Local Examinations, but also for the 'Higher Examinations for Women,' which have this year been granted by the Glasgow University Examination Board.

The Secretary for the correspondence classes of the Association has received from many of last year's pupils, resident in all parts of the kingdom, letters expressing the great pleasure and benefit which they have derived from the session's work; and the success which has already attended the system has determined the Glasgow Association to open their classes to young men as well as young women.

One other important extension of the scheme remains to be noticed. The Irish Intermediate Education Act opens a wide field; and to meet the wishes of many of the pupils residing in Ireland, classes in the lines prescribed by the Intermediate Education Examining Board will be carried on.

Information with regard to all the classes may be had from the Honorary Secretary for the Correspondence Classes, Miss Jane S. Macarthur, 4 Buckingham Street, Hillhead, Glasgow.

LOST.

In other years, when life was gay,
And I was young and knew not care,
I took a gem of priceless worth,
And idly placed it in my hair.
I marked not when the breezes wild,
That through my locks did rudely play,
Unloosed the jewel from my brow;
It fell to earth, and there it lay.

Time drove the roses from my cheek,
And dimmed the radiance of mine eye,
And then I thought me of the gem
That I had cast so lightly by.
I went to seek it where it fell;
And while I searched in vain the place,
I saw another maiden pass,
A vision fair of youth and grace.

And lo! upon her brow of snow,
I saw my long-lost treasure shine,
Far far less brilliant than of yore;
And yet I knew that it was mine.
I stretched my hand, and eager cried:
'Give back, restore what is mine own!'
She answering said: 'Nay; once 'twas thine;
But now 'tis mine, and mine alone!'

'I found the gem thou couldst not prize
Lying unheeded in the mire;
I cleansed it with my love's pure tears,
And now 'tis all my heart's desire.'
She went her way; and I was left
To gaze into a cold blank life,
Of love and hope alike bereft.
A cheerless lot of toil and strife.

THE MATRIMONIAL.

AMONG all sensible people, married life, as we understand it in this country, is considered to be an honourable and absolutely indispensable condition for the well-being of any rightly conducted community. Yet, it is surprising how many persons think of and speak of this condition with contempt, or at all events with indifference, and who sometimes go the length of cynically observing that 'to do the matrimonial' would be the last of their actions. We are going to chat a little about the 'Matrimonial' in different points of view. Though written about since the beginning of the world, the subject is far from being exhausted. We may even in a small way say something out of the usual track.

Of course we begin with a slight dash at philosophising. The reason marriage can be extolled is very plain. A man, his wife, and children constitute the primary element of human society. Without this rudimental institution things would go all wrong. Government would be a chaos. Vice and barbarism would be predominant. We have the best evidence that such is a likely result when we look at Turkey, drifting to ruin and extinction through the influence of polygamy, slavery, and superstition. A thriving civilisation is out of the question. Women are left uneducated, and generally lead an idle animal existence. Many of them are openly or covertly bought while young, and are ever after treated as slaves. They are certainly brought up without any sense of independence, and in point of fact are nonentities in the ordinary duties of life. The manner in which the higher class of these women live offers some curious particulars. From France, England, and elsewhere there has been a considerable export of elegant toys to amuse the idle hours of these unfortunate ladies. They take particular delight in the costly musical toy known as the piping bullfinch, musical boxes, miniature puppets dancing on wires, and other drolleries deemed to be valuable in killing time. Think of women kept in a degrading capti-

vity, and spending day after day in childishly laughing at a cuckoo clock or a jumping-Jack. That, however, is not the worst of a condition so deplorable. Where women are not educated, and not put in their proper position, it follows that children are only half taught. Their mother cannot instruct them in anything useful, and their intellect is accordingly dwarfed. No benefit is derived from visitors, because no man is allowed to intrude where there are females; and for the same reason there can be no promiscuous hospitality. The children, accordingly, see and learn nothing of the ways of the world generally. To expect any good to come out of this method of conducting domestic affairs is ridiculous. Progress is impossible. The tendency is to retrograde in spite of all propping up from without. The wealth of Europe could not keep the Turkish nation on its feet. Sooner or later, political dissolution is the natural and inevitable destiny.

It is tolerably clear that the faculties which stand us in good stead require a certain primary culture from father and mother. This is what we call fireside education. The child listens to all that is said. Friends call, and conversations ensue, of which the youngsters take advantage. The girls benefit by the talk of the boys, and the boys in turn are softened by the more gentle observations of the girls. Such is home culture, and it is all a result of a father and mother being united in matrimony; for then there is a common interest to improve the offspring. What a contrast between the debasements incidental to Turkish home-life and this wholesomeness in social arrangements.

We think there is something highly touching in seeing two young beings united in the acceptable and sacred bonds which are to last until severed by the death of either. It is a solemn occasion. We do not dispute that as a civil contract it is well enough; but by a kind of natural instinct, and looking to the importance of life-long obligations that may ensue, one feels that the ceremonial should be crowned with a becoming sanctity. We do not like to see the Matrimonial trifled with and reduced to a common-

place bargain. Elevating and holy sentiments creep over us when we behold a loving pair full of natural affection joined together under the sweetly soothing strains of the wedding-hymn—

'The voice that breathed o'er Eden,
That earliest wedding-day,
The primal marriage blessing,
It hath not passed away.'

To the parties concerned, the recollection of these solemnities do not easily fade by the lapse of time, but are held tenaciously by memory to the last. Possibly an additional zest is given by a recollection of the wedding breakfast. What famous though subdued hilarity on the occasion! How the aged father of the bride, half joyful in seeing his daughter agreeably settled in life, but bound to look a little sorrowful in parting with her, quivered tenderly in his speech, and how the mother becomingly shed a few tears at parting! When the 'silver wedding' comes round, these fond reminiscences are still vividly pictured. If life be protracted to the occurrence of a 'golden wedding,' the momentous event half a century ago is perhaps more strongly imprinted on memory than ever. Fathers and mothers, and hundreds of early friends, have passed away, but the aged pair happy in mutual communion have been spared, and lovingly casting an eye on their children and grandchildren, bless the day they were married. That is the Matrimonial as it ought to be, and not unfrequently is, notwithstanding the vicissitudes that haunt human affairs.

We are all too painfully aware that the experiences in married life may be of a less pleasing character than are fondly pictured by poets and moralists. But who is to blame? Guided by passion, or with an inconsiderate regard to mutual adaptability, the Matrimonial is hurried into with more speed than discretion. To marry in haste is probably to repent at leisure; and with repentance comes lifelong misery. Terrible examples have fallen under our notice. A common form of the error is that of a young man of good parts and aspirations, who heedlessly plunges into the Matrimonial with a woman who would answer admirably as a poor man's wife, but is incapable of fulfilling a higher destiny. She would patiently drudge in humble retirement, and be a pattern of thrift and assiduity. She might be compared to the good housewife 'whose candle goeth not out by night; she looketh well to the ways of her household, and eateth not the bread of idleness.' She is in a sphere quite suitable to her faculties. It is a totally different thing when, by enterprise and ingenuity, her husband attains to affluence and distinction. She now falls behind, fails to realise her position, declines to act the part properly belonging to her, and in many ways brings herself and her husband into discredit. Remonstrances are in vain, for there is a downright inability to do better. The true error consisted in marrying her without foresight as to possible consequences. In a sense, the woman is to be pitied. If let alone, she would probably have found a mate with inherent notions and habits like her own.

We remember the case of an eminent and estimable artist now deceased, who one day made the sad confession: 'My wife and I were happy together when in our early days our dinner-table

was an old tea-chest, and when our fare was of the poorest. Success in my professional career was followed by cankering cares and misery. My poor wife with some good qualities obstinately clung to her original condition and habits, as well as to companions with whom I could not associate. My marriage was altogether a blunder, which nothing could repair.' The case ended in a way not at all unusual. The woman fell into a course of intemperance, and a permanent separation was the result. Here was the life of a worthy man blighted, all through a little want of consideration at the outset. It is but one among hundreds of instances of the inability, or perverse unwillingness, of women of a humble station to rise with becoming dignity to the level that may be attained by their husbands.

We are reminded of the late serio-comic case of Tompits, a gentleman who, on returning from India with a fortune, fell desperately in love with Cis, a young and handsome stewardess on board a steamer. Without deliberation, he proposed to Cis, was accepted, and married her. They set up housekeeping in splendid style, and were soon surrounded by friends. From having ministered to a high class of ladies in the steamer, Cis, by imitation, was able to conduct herself with tolerable propriety. She dressed elegantly; and so long as she held her tongue in company, no fault was to be found with her intellectual accomplishments. Unfortunately, she could not relinquish her old habits. Her taste lay in scrubbing, scouring, and other menial offices. After a festivity, she liked to sweep the carpets, wash the glasses, and burnish the silver spoons. She went whisking through the house with a duster, and was passionately attached to towels, of which she accumulated enormous quantities. On one occasion, a party of officers who had been to dinner by invitation the previous day, called to leave cards, and to their amazement they found the elegant Mrs Tompits in deshabille scouring the lobby floor. These proceedings, which, with a staff of domestics, were wholly out of place, greatly disconcerted Tompits. He recommended Cis to occupy herself with reading, or some fashionable amusement. But Cis did not care for reading; could barely sign her name, and hated to appear in fashionable society. The result of the miserable mésalliance was open domestic hostilities. Tompits raged in English, Persian, and Hindi. Cis, who had a violent temper, stamped, scowled, and raved like a French tragedy queen.

To the accusation of Tompits that she was not thankful for what he had done for her, Cis scornfully retorted: 'I wonder what I should be thankful for! You cruelly took me away from a situation in which I was useful, happy, and respected. You have brought me into a position where with all its finery I am miserable, and expected to sit like a painted doll among people who spend their lives in idleness and folly. I tell you, I hate the whole concern, and should like to be back in the dear old steamer.' Usually, after such a tirade, Cis burst into tears, and fled to her own apartment. A consideration for the interests of children is often the means of appeasing family dissensions. In the present instance no such means were available. Cis had several children, but they all died shortly after birth. Denied parental consolations, unchastened by her losses,

with no relatives to admonish or advise her, she brooded on her fancied wrongs, was the victim of her own warped feelings and an imperfect sense of what was dutiful and proper. Ultimately, a curious kind of truce was effected. The pair lived separately in the same house. Holding no sort of intercourse, they fretted, pined, and died within a few months of each other. It was a distressing case of matrimonial infelicity; but was what might not unreasonably have been expected. When gentlemen of fortune are pleased to marry pretty barmaids or handsome stewardesses, they must not be surprised if they experience the fate of the luckless Tompits.

Why women are so often deficient in the art of accommodating themselves to a higher social sphere, is a question we do not stop to answer. Enough has been said in uttering the voice of warning on a matter that invites the most earnest foresight. Happily there are cases in which new and onerous positions are filled with a tact that is truly admirable. Though not of an exalted origin, some women may be said to be ladies by nature. They take kindly to any rise in the condition of their husbands. Much depends on the up-bringing. Jack Scott and Betsy Surtees set up in the Matrimonial with a cordial unison of feeling. Not particularly well off at first, they were for a time contented to sup on a pennyworth of sprats. When, by his talents, Jack rose in the world, Betsy rose with him; for she was of respectable parentage, and brought up with a style of good manners. Accordingly, when Jack was made Lord Chancellor and raised to the peerage, no one acquitted herself better than the Countess of Eldon.

If one class of women fall short in their tastes and habits, fully as numerous a class go so far in their attempts to exceed in dress, expenditure, and frivolity, as to damage the character of the Matrimonial. Men of moderate means are afraid to marry, lest they should be chained for life to women who might ruin them by their unregulated and costly indulgences. We are inclined to think that this dread more than anything else prevents men from marrying in early life, when they are as yet unable to encounter an expensive system of housekeeping. They are doubtless wrong in being so intimidated. Using caution in making their choice, and avoiding certain categories of social life, they need be under little apprehension. The whole sex are not to be confounded with beings with whom it would be dangerous to strike up an intimacy.

We cannot pass over an unfortunate source of unhappiness in married life. It is neglect on the part of husbands. They become absorbed in professional pursuits; often they are long absent from home; or they give themselves up to exclusively selfish amusements, just as if they were still bachelors. In such circumstances, their unhappy wives feel as if they had been tricked into a contract that has not been fulfilled. When the woman vowed to 'obey,' the man promised to 'cherish,' which at least infers personal attention and honourable treatment. The husband plainly breaks his promise. He has fallen short of his duty. He may cheerfully pay all the money required to carry on the domestic concern; but that is only a simple obligation. It cannot be called cherishing. It demonstrates no affection; neither does munificence in pin-money. A

cheque on a bank is not equivalent to the love and kindness which were reasonably expected from the being to whom she had confidently resigned her independence. What a heart-breaking sequel to a youthful dream of felicity! We can hardly bring ourselves to picture the dissensions that frequently occur, with finally an unseemly and incurable rupture. Perhaps not quite finally. The Divorce Court, statements in which newspapers revel, and weeks of town-talk, may close up the rear, and add one more to the hideous stories of outrage on the decencies of married life.

There are other causes for regret from having impetuously rushed into the Matrimonial. Beyond all, on one side or other there may be serious constitutional infirmities. People take great care to match horses and other animals, in order to maintain a pure and vigorous lineage. Little or no care is taken on this score when contracting a scheme of matrimony. A young man heedlessly marries into a family known to be affected with some hereditary disease, never reflecting until too late on the consequences of his act. He forgets that in a physical as well as in a mental sense the sins of the fathers are apt to be visited on the children. With his eyes open, he takes to his bosom a wife who will in all likelihood end her days in an asylum, and whose progeny can scarcely fail to share in her deplorable infirmity. Where is the comfort in having a family defective in mental qualifications? You may endow them with the fortune realised by years of successful industry; but from the fatal taint we speak of, it is out of your power to bequeath to them brains or common-sense.

'Can troubled or polluted springs
A hallowed stream afford?'

Indisputably, they cannot, and the fact should be borne in mind in the matter of courtship. Let not the institution of marriage be charged with the calamity. Your own rash conduct in forming the alliance is at fault. We may be sorry for you in the trying circumstances, but the penalty of indiscretion is inevitable.

The mishaps that disfigure the married state afford no proper ground for throwing reproaches on the Matrimonial. After all that bachelors can allege in vindication of their celibacy, marriage on the whole constitutes the happiest, the most satisfactory and salutary condition in which either man or woman can live. Nature makes no provision for celibacy, which from necessity may be submitted to, and is not inconsistent with piety and certain peremptory calls of duty. What pleasant recollections of unmarried female relations who made endless sacrifices in doing good, and who merited, if they did not receive the liveliest tokens of gratitude. Looked at comprehensively, however, celibacy in either sex is a species of oddity, and is usually avoided where practicable. It is not well for man nor for woman to be alone in the world. The common destiny is to run in pairs, each of the two to help the other. Such is the rule to be fairly dealt with. We certainly know by experience that bachelors in their old age lead a helpless and cheerless existence, and generally die unmourned by any one—and the richer they are, the less is the lamentation.

The Vicar of Wakefield tells us that he chose his

wife as she chose her wedding-gown, which was on the principle of selecting one that would wear well. If in the article of marriage you fix on a flimsy material, take the consequences, and blame nobody but yourself. The market is open. Do not be in a hurry. Yet, do not put off time because you happen to be unable to start on a high scale of worldly wealth. Early marriages may not be always commendable; but wait, wait, waiting to reach some imaginary standard, is—all other things being equal—by no means sound policy. Burns pathetically sings:

'O why should Fate sic pleasure have,
Life's dearest bands untwining,
Or why see sweet a flower as love
Depend on Fortune's shining?'

Advice in a matter of this kind goes for very little. Every one takes his or her own way. No doubt, it is distressing to see, as you sometimes do, young people making sacrifices to be married, and landing themselves in semi-starvation. We have heard of a lady who earnestly advised Jane, her female attendant, not to marry, as the step would surely end in misery. The girl in reply said she was tired of being a servant, and wished to rest her bones. 'Well, Jane,' asked the lady some time afterwards, 'have you rested your bones?' 'Yes,' replied Jane, rather dismally; 'but it has been my jaw-bones!' Without due precaution, risks like this may have to be encountered in the matrimonial lottery.

Ordinarily, marriage inspires to exertion, and thus brings its own special reward. In the choice of assistants for some official duty, the married man is for the most part preferred. He has given hostages to Fortune for his good behaviour. Besides this peculiar advantage, he experiences the pleasure of seeing his

'Children run to kiss their sire's return,
Or climb his knees the envied kiss to share.'

We can picture nothing more charming than a scene of domestic felicity like this, nor one more calculated to nerve to enterprises on which rest individual and national prosperity. In married life there are likewise pleasures of memory held precious though the hearth be partially desolate. When, by the visitation of Providence, children are swept away, and one of the parents has perhaps been left in a widowed condition, the survivor recalls in imagination many tender incidents in the past which no celibate can possibly experience:

'When time, which steals our years away,
Shall steal our pleasures too,
The memory of the past shall stay,
And half our joys renew.'

Who, then, has the heart, with heedless levity, to depreciate or speak contemptuously of the Matrimonial?
w. c.

A STORY OF DETECTION.

My employment is that of a carver in stone. Many years ago, soon after I had learnt my business, the firm in whose employ I was, undertook the erection of a gentleman's mansion, and I was sent to execute the ornamental work. The village near to which the mansion was built was on the shore of an estuary of the Bay of Morecambe,

not far from a market-town whose name I need not give. As my work would keep me from home several weeks, a good lodging was a most desirable thing; but although I tried to get accommodation in a private house, I failed, and was forced to lodge in the village inn, the *Lord Admiral*.

Amongst those who were in the habit of frequenting the aforesaid hostelry; was a man of singular habits and odd temper. His home was about a mile from the village, on the side of a lane leading to a couple of farms. His house, like himself, was a queer one. Originally it had been built for the storage of corn, the produce of fields at a distance from the farmstead. Somehow, it had ceased to be needed for that purpose; so its owner turned it into a dwelling-house, and as such, it was now occupied by the aforesaid strange man. It was divided into three apartments on the ground-floor, one of which, a very large one, was set apart and used as a kind of museum, its occupant being a stuffer of birds and small quadrupeds. When he had no work of this sort for other persons, he worked for stock, and this large room was his warehouse.

He was a man of ill-temper and loose habits, and for some time had borne a dubious character. When people were asked why he was suspected, they could not give a satisfactory reply. 'He lives,' they would say, 'without doing work equal to his expenditure, which looks bad.' As I got to know him, I found that he had an unamiable temper: was morose, sour, and at times passionate. He was also fond of display, given to betting, and like all such, led a loose uneven life, oftener loitering about than at work. So I did not wonder that well-meaning people did not like him.

He mostly came on wet nights to the *Lord Admiral*. As we became acquainted, he invited me to look over his collection of birds and quadrupeds. I was pleased with what I saw. He had indeed a good collection; and as well as I could judge, had done his work well. He had also a good assortment of butterflies and moths; and in a corner, close to the ceiling, had what he called a butterfly breeding-box, which he said belonged to his son, a young man of my own age, also given to bird-stuffing amusements.

But I was most taken up with two animals which differed from the rest. One was a beautiful dog, and the other a *lusus natura*—a lamb with the rudiments of a fifth leg, and some other abnormal characteristic which I have forgotten. The old man said he had stuffed both for their original owners, who had somehow failed to take them away. They were placed at one end of the room, one in each corner, away from the window, and close to the wall, where, except in strong daylight, they could not be easily seen. The connection of these particulars with my story will be seen in the sequel.

I had been in the village about six weeks, when the neighbourhood was aroused and alarmed one morning by the report of the robbery of a jeweller's shop in the market-town already referred to, that had been effected during the preceding night. Much valuable property had been taken. This robbery had been effected in such a way as led to the belief that a gang of practised thieves had done it. The prevailing question was, 'Do

the robbers live among us, or have they come from a distance?' This query was still going from mouth to mouth when we were startled, astounded indeed, by the report of a second robbery of the same premises, and on the night following by the breaking into and purloining of a provision warehouse in our own village. Were I writing fiction, I would not have made the robbers pay so soon a second visit to the jeweller's, as such an act would have been deemed preposterous; but I am relating what really occurred, and so am forced to say what I have said.

The jeweller had been so taken up by efforts to find out the thieves and regain his first loss, that he had not placed additional guard over what was left; besides, he was sure, he said, that thieves would not think of revisiting him for a long time. As for the provision-dealer, he said in my hearing that he had no fear of his place being entered, as he believed robbers would not care to touch property so bulky and of such inferior value as his. But he had reckoned without his host; for he had lost a fine ham, a large lot of tea, a deal of spices, a few boxes of cigars, and indeed a portion of most of what he dealt in. The excitement and alarm occasioned by these robberies was great and wide-spread.

Two batches of detectives, one from Lancaster and the other from Kendal, came to our village to see what they could find out. They were not short of questions, I mind; but they took care what sort of questions they answered. It was easy to see that one of their aims was to make it appear that they believed the robbers came from a distance, in order to put the thieves off their guard; for their own opinion was the opposite of this.

No event, however serious, can keep hold of people's minds beyond a certain time; and these robberies were beginning to give place to some other subject, when the next act in the drama began to be played. It was on a Friday afternoon, about a month after the robberies. The day was wet and wild; and as my work was the outdoor carving of stones which had been placed in position in the rough, I was unable to go on with it, and so had to return to my quarters. I had got my dinner, and had just called for a pint of ale with my pipe, when an elderly ill-dressed man came in, and sitting down on a bench beside me, said in broad Lancashire accent: 'I'll sup wi' tha lad, if tha dosen't care;' on which he lifted my mug to his lips, and drank freely. I had not got over my surprise, when he, wiping his mouth with his hand, gave me a history of the past day or two. The account was this: he had been a gentleman's gardener, near Lancaster, over twenty years; had a capital place, but had not had sense enough to keep it, for he had gone on the loose for a fortnight, which was more than his master would put up with; so he was discharged. 'This wor day afore yesterday,' he said; 'an' I've drank for vary vexation ever sin', trampin' as I drank; an' so here I am wi' a dry math an' wi'out a 'openny i' my pocket. Doesta think,' he concluded, 'aw con raise a penny or tippence amang th' company?'

I gave him a trifle; others did the same; so having thus 'raised the wind,' he called for bread, cheese, and ale, and made a good meal.

During the time the gardener had been talking to me, the landlord had been within hearing. So

accosting the old man while he was eating his dinner, he said: 'You are a gardener, I understand?'

'I am,' was the reply.

'Well,' said the landlord, 'I've a garden which needs fettling. I have not time to attend to it myself; and as it is time the seed was in, I'll employ you if you are willing. I'll find you plenty to eat and drink; you can have a bed as well; and if you please me, I'll not see you leave without a few shillings in your pocket. What say you?'

'I say agreed,' replied the gardener, rising to his feet and grasping the landlord's hand. 'I'll not begin to-morn, howiver; but I'll look rand, an' get riddy for Monday morn.'

This proposal was satisfactory, wherefore the gardener was made happy.

Shortly afterwards we had an addition to our company by the incoming of the old bird-stuffer, whom I shall henceforth call the naturalist—as this designation was the one which pleased him—his son the butterfly-breeder, and two other men whom I had not yet seen. These—the strangers—first looked hard at the company; but the naturalist, giving them a significant nod, which seemed to say, 'All's right,' they settled down and called for a glass of rum apiece.

By this time the gardener had finished his dinner, when putting his arms on the table and his head on his arms, he fell or seemed to fall asleep. The rain which continued to come down, compelled me still to abide under cover; so placing my chair in a corner and putting my head against the wall, I tried to get a nap also. The naturalist and his companions were now the only persons in the room besides the gardener and me.

I cannot tell half nor quarter of what was said by first one and then another of the four persons; nor did I understand some of the phrases which they used. 'Bruce' and 'Wonder,' 'flax' and 'stuffing' were words often employed by them. I recollected that 'Bruce' was the name of the dog, and 'Wonder' that of the lamb in the museum before spoken of; and the other terms, I judged, referred to the materials with which they were stuffed; but I could not see why they should speak in so low a tone as they did when they spoke of them. Once or twice they referred to a bird by some slang phrase. But after events made this clear enough.

By-and-by the weather took up, when the men, draining their glasses, got up and went away. The moment they were gone the gardener roused up, took a memorandum-book out of his pocket, and began to write therein. He then asked me if I knew who the men were, and what was their occupation, and if I understood any of the words they had uttered in the lower tone of voice. I gave him what information I could. 'But,' I said, 'both they and I believed you were asleep.'

'It is well to go into dreamland at times,' he said; and then added: 'Did you say that the old man keeps a museum? Have you seen it? Do you think I could get a look at it?'

The questions were put one after the other in quick succession, as though he were eager and anxious about something. I said 'Yes,' to each; but I was surprised at the good English in which he now spoke, and at the refinement which marked his manners. Still I could make nothing of it.

I pass over the next few days, as they brought forth no remarkable incident. The gardener had stuck to his contract with the landlord, and I had been enabled to get on with my work. The four men did not again visit us; but as I went on with my carving, I saw first one and then another of them pass my place. And once I saw them all in earnest converse in a retired lane.

After supper, one night, I took the gardener to the barn-like habitation of the old naturalist. As we went along, he asked me to take particular notice of the dog and the lamb; 'for,' said he, 'I was struck with the questions one of the men put as to whether "Bruce" and "Wonder" could take in any more "cotton" or "flax." And it is just possible,' he continued, 'that he has a way of taking out and putting in the stuffing after the skin has become set and hard: a thing worth knowing, I should think.'

When we got to the house, the old man came to the door, closing it after him. Being asked if he would allow the gardener to see over his collection of preserved animals, he at first seemed perplexed, and saying: 'I'll ask my son,' he went in, leaving us outside. Shortly he returned, and said: 'It is not convenient to enter the room to-night, as it is being cleaned and the contents rearranged; but if your friend will come to-morrow night, and come alone, he shall see over it.'

We agreed, and came away. I was at a loss to account for the condition imposed; but my companion was set up with the arrangement.

Next night came, and the gardener set off on his errand. I was all impatience for his return. But when he came back, he seemed unwilling to relate the result of his adventure, simply saying: 'I'm in no humour for talk to-night; I'll relate what I've seen and said, to-morrow.'

My friend had got on well with his gardening. His potatoes and onions, his turnips and carrots had been got in; and it was clear that if the next two days should prove fine, he would finish the job on the Saturday night.

On Friday night he came to me in the kitchen, in a corner of which I was reading, and asked me to take a short walk with him. I got up and went. The night was fine, but dark. We walked in the direction of the museum. He asked me if I could keep a secret for a day or two. Replying in the affirmative, he said he had a strong suspicion that the old naturalist or his son was no better than he should be; that he was sure he or they knew more about the late robberies than other folks; and that he believed if he had a few shillings which he could call his own, he could come at the truth, and concluded by asking me to lend him a sovereign for a few days. I agreed, for I had begun to feel an unaccountable curiosity growing within me.

We had not walked far before we met the naturalist's son, apparently by appointment; for my companion told him that I had promised him a loan, and that, therefore, he would be at his father's house next day and make a purchase. We parted and came home.

About the middle of Saturday afternoon he set off; and in less than an hour he came back, bearing a tolerably sized parcel. Giving me a signal as he passed me, I joined him in the back-yard. He said: 'I'm on the track of the thieves, I

believe. Last night but one, on reaching the house, and while looking over the museum, the old man said that his son was rather short of money; but having exchanged a frame of moths and a few birds for a lot of provisions, if I would buy some of the latter, I might sell them at a profit; or they would keep me in eatables for a while, and the sale would relieve his son. I agreed to buy if I could raise the money. Now, I am not without cash, but it would not have done to say so; hence I agreed to ask you for a loan. Well, I've got a lot of things to-day dirt cheap, which I really believe belong to one of the late robberies. I go hence to-morrow on the sly; but on Monday you may look for my return.' Giving me a playful dig in the side, he left me. His absence during the night and the day after surprised the landlord, but I said nothing.

I was all impatience until Monday came. It came at last. I was busy at my carving when I heard a well-known voice hail me from below. On looking down from my stage, whom should I see in the road beneath, smiling all the face over, but my old friend the gardener in a policeman's uniform! The truth flashed through me in a moment. I went down. Grasping my hand, he said: 'The secret's out, you see! Come along with me and see the upshot.'

I was about to witness a *dénouement* I had not looked for. Up the road were a couple of policemen. My old companion was the chief, being a sergeant of police. He led the way to the museum, and was first to enter.

'Good-morning, old friend,' he said, on encountering the naturalist. 'I've come to take away a few more parcels of your cheap provisions.'

I saw that the old gardener was detected in the speaker, and that the game was seen to be up. The old man's son rushed to the door and scrambled off, only, however, to fall into the clutches of one of the officers who were on the watch. The old man was utterly helpless and almost beside himself. Sinking into his chair, he cried out: 'I'm not the thief; the thieves are *there*,' pointing to the door, and meaning, I could see, his son and his confederates, though they were not present.

We went into the museum. The first thing the old gardener—as I shall still call him—did was to take hold of 'Bruce,' while he desired one of his comrades to lay hold of 'Wonder.' On moving them, a noise of loose metal was heard. A moment's examination sufficed to reveal the secret. In the off-side of each animal, in the soft part, an orifice had been made by cutting the skin in such a way as to enable the operator to replace it with a little care. A part of the stuffing had been removed, leaving a vacancy just like a thistle's nest. This was filled with jewellery—watches, guards, ear-rings and finger-rings. A further examination of the museum revealed other and as singular hiding-places; for example, a game-cock was found put out of sight; on taking hold of it, a noise of clinking metal was heard. On lifting up the feathers over the crop, a small hole was seen, out of which rolled, when the bird was shaken, a number of trinkets.

Nearly all the proceeds of the two robberies of the jeweller were recovered; one watch and a few guards only being absent. And some of the property of the provision-dealer was also found stowed in the breeding-box, though most of it had been

used or sold. I scarcely need say that the parcel sold to 'the gardener' was a part of it, and had to do with the detection. My friend the sergeant informed me that he had been induced to assume the character which he had so well enacted, entirely on speculation. While making a survey of the neighbourhood a few days before he began to play his part, he had observed the backward state of the landlord's garden; and believing that he would readily catch at a chance of getting it finished off in a cheap way, and being a good hand at gardening, he had hit upon the scheme which had answered so well. He had believed that the robbers were not far from the locality of the public-house, and might come there now and again, and so could he lodge there without being known or suspected he might come at all that he desired. And as he had hoped, so did it come to pass.

The naturalist, who, it came out, had long been a receiver of stolen property, and his son, whose first burglaries these were, got each five years' penal servitude; one of the other men—who came from a distant town and were old hands—was likewise convicted and punished; but the fourth, for some forgotten reason, got off. My friend came in for the good reward offered in this case; and for the part which I had taken in the affair, the jeweller gave me a gold pencil-holder, which I treasure as a memento.

THE TELEPHONE EXCHANGE.

BEFORE it has ceased to excite wonder as a scientific novelty, the telephone acquires fresh interest from the modes in which it is now utilised for the practical purposes of business and private life. No longer regarded merely as an amusing toy, it enables persons to converse easily with any of a prescribed circle of friends, customers, or clients scattered many miles apart. In thus applying the invention to every-day uses, America has anticipated us; but the extent to which its advantages are being developed in our own country would surprise even those who are familiar with modern triumphs of the telegraph. At the recent soiree of the British Association in Sheffield, one of the most interesting features was a specimen of the contrivance by which electricity is made to serve as a medium of direct vocal communication between any number of persons whose premises are connected by wires through a central office. This system is largely adopted in the United States, where it has become well known as the 'Telephone Exchange.' In the city of Chicago there are as many as two thousand subscribers to one Exchange; whilst in New York an equal number of wires converge at the central station. Any subscriber can have a chat whenever he pleases with any other member, without either having to leave his room; and a large proportion of the entire number may be in communication at the same time. A brief explanation of how this is done may interest our readers.

Every subscriber to any Telephone Exchange is furnished with a copy of a printed list, wherein each is designated by a number. When one member of the association—who we will suppose to be in his own office—wishes to communicate with another, the gentle touch of an electric bell summons the attention of the clerk at the

central office, who is apprised of the name or number of the person to be communicated with. Thereupon the operator puts the two into immediate communication by connecting their respective wires. The two gentlemen can then converse without anything being audible to the intermediary, who, when a bell sounds as a signal that the speaking is finished, severs the connection by the simple movement of a pin or small pointer, fixed in front of what is called the 'switch-board.'

At each end of all the electric wires—which radiate, like the spokes of a wheel, from the head office—the requisite apparatus is provided for speaking and hearing—namely, the transmitter and receiver. The latter resembles a large button, and is held close to the ear for answers, whilst a message is being spoken through the mouthpiece of the transmitter. A private conversation may thus be freely carried on; and so sensitive is the instrument, that fainter sounds than the ordinary tones of the human voice can be conveyed some miles.

Hopes were at first entertained, as our readers are aware, that the telephone might be available for long as well as for short distances. It is, however, found that five miles is the distance within which conversation may be carried on with effective distinctness. Beyond this, the vocal sounds are somewhat weakened in transmission. Telephonic talk has nevertheless been successfully carried on between New York and Philadelphia. A similar feat has also been performed in England between London and Norwich; but it is chiefly for shorter distances, and within the narrower limits of business towns, that this latest development of the utility of the telephone is being made available. A moderate sum per month is paid by each subscriber for the privilege of using the wires. The actual value of the privilege obviously depends very much upon the number of persons who choose to bring themselves within the circle of communication; but in this respect there has been no shortcoming in its adoption on the other side of the Atlantic. So popular has the system become in America, that there, it is said, as many as forty thousand telephones are at work; indeed, there is scarcely a town of considerable size in the United States that has not its Telephone Exchange.

In London, too, telephonic inter-communication has now become an established fact. The completeness with which the apparatus fulfils all the conditions and requirements of practice was recently demonstrated before a company of scientific gentlemen, who anticipate a wide-spread application of the system in England. Still further proof of its growing favour may be gathered from the fact that local enterprise has already registered several companies for the early formation of similar Exchanges in the leading provincial towns. The first Telephone Exchange opened in the metropolis is situated in Lombard Street; and it was in connection with this agency that the experiments to which we have alluded took place. For the purposes of the trial, or rather opening exhibition, use was made of wires connecting the premises of nine subscribers, one at each end of Queen Victoria Street, and the others situated in the following localities—namely, Copthall Buildings, Old Broad Street, Suffolk Lane, Princes

Street, George Yard, Throgmorton Street, and Carey Street at the back of the New Law Courts. From the Mansion House Buildings in Queen Victoria Street, conversation was carried on easily with several of the other stations. The gentleman occupying the premises in Carey Street—the longest circuit—happened to be one of the company at the Mansion House Buildings, and was able to communicate thence with his clerk. In this instance, and also when the connection was next made with Copthall Buildings, the voice which responded to the call was recognised by subscribers standing a few feet from the instrument. Those who replied had spoken in a louder tone than was necessary, there being no need in ordinary cases to raise the voice above the usual pitch in order to make it perfectly audible to the listener at the receiving end of the wire. Not long ago a paragraph appeared in the *Times* which was dictated through the telephone, the instrument giving a perfectly correct reproduction of the transmitted subject.

A visit to the Exchange in Lombard Street gives an insight into the ease and simplicity with which the operator—who may be a mere boy—can 'switch' different wires into connection or shut them off, as required. Of course one station can be connected with only one other at the same time; but the coupling and uncoupling are effected so quickly that a person may communicate with many others in rapid succession. When the electric bell rings at the central office, the attendant, by a glance at the indicator, can see who calls for his attention. In some cases it is shewn by a tiny shutter, which falls and discloses the subscriber's number; in others, a little red disc is moved by the bell current into a corresponding eyelet or circle upon the face of the switch-board. The wires are of steel, covered with an electromagnetic deposit of copper, which insures strength, conductivity, and endurance. They are very slender; so thin and light, in fact, that they do not require posts, but can be attached, without harm, to chimney-stacks and other parts of buildings, due care being taken with respect to insulation.

Almost simultaneously with the introduction of the Telephone Exchange system to the metropolis, several companies, formed on the limited liability principle, have been started in the provinces for extending the same idea. One of these is in the West Riding of Yorkshire. It embraces the towns of Leeds, Bradford, Huddersfield, and Halifax, in some of which a sufficient number of subscribers has already been obtained to encourage the early commencement of operations. The shrewd Yorkshire mind has not, however, waited until now before turning the telephone to good practical account. For a considerable time past the invention has been utilised in the West Riding, and other districts in the north of England, by private persons and business houses. A certain resident of Halifax is enabled by its means to hear in his own dwelling the sermons preached in the principal Dissenting chapel of the town. In order to permit of this, a telephonic receiver is ingeniously placed at the upper part of the pulpit. Another point in favour of this particular case is, that the pastor of the chapel in question, well known as a staunch champion of Nonconformity, has an unusually powerful voice and distinct articulation.

Clergymen in general are not likely to become enamoured of a system which might aggravate the grievance of absentee congregations; but the experiment shews at anyrate how, in exceptional cases, either the discourse of an eminent divine or the melodious notes of a *prima donna* may be heard with comfort at a distance of several miles.

In Leeds the telephone is largely used for more commonplace but not less useful purposes. Many manufacturing firms in that town daily experience its advantages in carrying on communications between their offices or warehouses and their suburban mills. The Tramways Company has also in operation a Telephonic Exchange of its own. One advantage of the system is that no skill or elaborate training is required to make use of it. After 'switching' on the proper wire, the whole thing is as easy as talking to any person in the same room. There is no need to shout loudly; nor is it necessary for the speaker to put his mouth close to the 'transmitter.' In testing the wires of the Leeds Tramway Company, one could for instance hear, despite the noises of street traffic in Boar Lane, every note of tunes played upon a piano in the house of the manager at Chapeltown, a suburb about three miles distant! In order to share the conveniences of the invention, some doctors are having electric wires laid from consulting-rooms in town to their country residences. Patients may thus consult their medical man without bringing him away from the enjoyment of home comforts in his rural retreat; and more explicit intimation of urgent calls can be conveyed without the loss of time which would occur in the older ways of sending a message.

During some recent experiments in Glasgow, it was proved that telephonic sound can be conveyed through a less facile conductor than the usual unbroken wire. In this case, a break in the wire was taken up by a small circle of ladies and gentlemen, who joined hands, and thus continued the electric current through their own bodies. The effect of interposing these human links was to diffuse and weaken the electric power; but the current was still sufficient to convey some audible reproduction of a song from the transmitting to the receiving end of a telephone.

A TERRIBLE SEA-VOYAGE.

It was my fortune many years ago to lead a wandering life as a marine engineer. Anxious from boyhood to see the world, I had taken every opportunity, when the time came, of changing from one service to another, not so much from ambitious hopes of advancement in my profession, as for the gratification of a spirit of adventure. Accordingly, having sailed for some years in the Mediterranean, I found myself about the year 1867, in the Spanish service as chief-engineer of a large ocean mail-steamer sailing between Spain and the West Indies. I had been summoned from the coast of Morocco, when the war between Spain and that country was concluded, to join this vessel; and as I went on board in one of the ship's boats, I had the opportunity of observing her build and general appearance for the first time. The ship was large, heavily masted, barque-rigged, and could spread a great

amount of canvas; not too fine in her lines; but apparently a good comfortable sea-boat, with, as I afterwards learned, engines of three hundred horse-power. The two days that yet remained before the ship sailed afforded ample time to find out that she was never intended and utterly unfit for a voyage within the tropics. The engine and boiler rooms were badly ventilated; little or no air-space over the boilers; and the 'tween decks over the top of the boilers seemed to be a receptacle for spare stores, ropes, paints, oils, and wood-work of all descriptions. I remonstrated strongly against sending the ship to sea in that condition; but of course everything was to be put right—next voyage.

We sailed at length with a fair wind, and called at the Canary Islands for a few hours. From thus keeping well within the tropics, we caught the light breeze from the east; and day after day we sailed on over calm and peaceful seas, with just enough wind to lift the sails and barely keep them full. The drifting sea-weed, pieces of wood, and flights of strange birds—all lent a strong interest to a passage across the Atlantic in these latitudes. We reached Havana at length, and prepared for our return voyage to Spain. The rainy season was beginning, the precursor of heat, and of fever to Europeans. In fact there were rumours of yellow-fever having made its appearance in the island, and we were glad at the prospect of getting away to sea. During the voyage from Europe we had enjoyed unabated prosperity; but since our arrival our crew had given some cause—from their recklessness, and I may say a sort of sullen approach to disobedience—for anxiety. The truth is, they had been gathered together within a few days of sailing from Spain; and among the drifting population of a moderate-sized seaport the demand for a large number of men at short notice necessarily included a portion of a class to be avoided if possible. And now in the loading of the ship I began to be distrustful of the disorder, irregularity, and want of discipline on board; for the luggage of the passengers, the cargo, and ship's stores got mixed in indescribable confusion, and were stowed away below in any careless fashion; while the officers and crew lounged about smoking and chatting with their friends from the shore.

At length the hour for sailing had come, and as we took a more northerly route on our return voyage, to get the prevailing westerly winds of more northern latitudes, we proceeded to pass through the Gulf of Florida, and for two days we went along smoothly enough. There was no wind; the heat was intense. And with this, a new cause of apprehension came upon me. What made matters worse, we had, much against my inclination, taken on board a large quantity of bituminous coal, the use of which involves risk. We were, too, in the hottest part of the Gulf-Stream, the sea-water shewing by the thermometer 82° Fahr., and the sun's rays nearly vertical. Under these combined influences the heat accumulated rapidly in the engine and boiler rooms, until it had reached 146° . One or two of the firemen were disabled from duty in consequence. I encouraged the men to persevere, as we were getting well through the Gulf of Florida, and once through and into the Atlantic, the temperature of the sea and atmosphere would be much lower.

Meanwhile, I had made casual inquiry about

the fire-pumps, two of which were on board, and had been examined in the port we had left; but to my intense surprise, I heard they had been put in the after-hold out of the way, and were covered up with cargo. I then strongly urged on the captain the necessity of clearing the deck over the boilers and round the funnel; but the usual answer was, To-morrow. Everything was to be done to-morrow, so the opportunity passed away. We were now three days at sea, with no apparent change in the weather; and going on the top of the boilers, I saw, in the dull light from above, that the base of the funnel was very hot—a dark red. Such a condition is not absolutely alarming under ordinary circumstances with fast-burning bituminous coal; but the chimney-casing was made of thin iron and wood, with very little space between the two for the heated air to ascend; and the quantity of lumber between decks made it peculiarly dangerous in this instance, if fire broke out; but as yet there were no signs of ignition, and I was obliged to content myself with the hope of a speedy change in the weather.

Passing on deck, the grateful coolness of evening—hot as it was—seemed to allay in a measure my uneasiness; the engines were working well, and we were making rapid progress. I lay down on a seat near the engine-room and fell fast asleep. In fact, all the passengers were driven by the intense heat below to try to find sleep and rest on deck. How long I slept I cannot say, but it must have been early morning when I awoke from a dream of horror in which I was fighting with a fearful fire. So strongly was I impressed with this, that I passed at once to the place, and found my dream in part realised; the woodwork round the funnel was charred and red inside, and at the point of bursting into flame. For a moment I stood appalled. I had seen a fire at sea, and knew from experience what a terrible trial we were about to grapple with; so passing quickly on deck, I summoned assistance as quietly as possible, to avoid causing alarm. To attach the hose to the pumps from the engines was the work of a few moments; and yet I was unwilling to resort to the use of water, unless fairly forced to do so; for the cold water falling on the boilers was sure to condense the steam inside; the speed of the engines would thus be reduced, and a full supply of water from the pumps rendered impossible. There was also the fear of the heated water falling on the firemen below, and driving them from their furnaces; but clearly there was no time for hesitation, and prompt action was required. The preparations alarmed the sleepers on deck; and as there were now dense clouds of smoke rolling up from below, concealment was no longer possible. The scene that followed was beyond description. It wanted yet some time from sunrise, and in the darkness, the terror and despair of the passengers was heart-rending. Meanwhile the smouldering woodwork had burst into flame, and in a very few minutes, the whole ship was lighted up, the fire spreading out and leaping upwards, seemingly determined to destroy the vessel and all it contained.

The officers and men were in a state of panic; and in the time lost by contradictory orders and the want of a good leader, the fire grew apace. It was a scene of extreme incapacity and imbecility. In vain I urged the necessity of confining the fire

within as small limits as possible, by removing the woodwork and stores, &c. round the fire; and as I had foreseen, the engines were nearly brought to a stand from the cold water falling on the boilers. I demanded that the fire-buckets should be used. It was all of no use; and at last I went in search of the captain of the ship. I found him forward in such a state of bewildered excitement that I looked at him in amazement. I asked him to come with me and restore order; but lifting his hands in an expressive way, as if to say it was of no use, he resumed his hurried and frantic promenade. I looked round, and daylight as it does within the tropics, was springing into existence. Observing some of the crew proceeding to unfasten the boats in order to leave the ship, I saw at once that for want of a good leader, the ship and many lives were about to be cast away. Seizing the captain by the arm, and pointing to the crew, I asked him if he was going to stand by and allow such scandalous work. He was aroused at last; for he proved himself a brave man, but wanting in the coolness and presence of mind necessary for such an emergency as we were called to encounter. With his assistance, some order was obtained, and I could explain that the fire looked more alarming than it really was. It only wanted the efforts of the men properly directed to get it under in a short time; and by cutting away the woodwork near the fire over the boilers, the danger of spreading was lessened; but the military officers who were passengers on board demanded that the ship be turned towards the land, and if necessary run on shore.

We were about forty miles from the coast of Florida, and I was sure that with well-sustained efforts, we could get the fire out before we reached land. My fear was that these efforts would slacken when the men saw that the ship was put about; and that fear was realised. Still we got the fire out after five hours' hard work, and just when we were approaching land. But over where the fire had been, there was a large open space, black and ugly, not pleasant to look upon; and when I thought of the long distance we had before us, over stormy seas, with the ship in such an exposed condition, I confess it was with no small degree of anxiety I regarded the future. The passengers clamoured loudly for the ship to return to the nearest port, a course strenuously resisted by the captain and myself; and after a strong protest from them, we proceeded seaward, and were once more homeward bound.

Exhausted though we all were, there was no time for idling or delay; for it was imperative that the decks should be got into a condition of safety at once; so after infinite labour, a quantity of planks was got from below, and the unsightly open space covered up, and tarpaulin fastened above all. It was not a minute too soon.

During the eventful night we had passed, the lightning had been gleaming behind the clouds on the horizon, lighting them up and shewing their jagged edges every few minutes; and now when we were beginning to breathe more freely after the hurry and excitement, there could be seen the portents of a coming change in the weather. It was still oppressively hot, and the sea and air absolutely calm; but the barometer, from being steady at 30 inches had fallen within two hours to 28.1 inches, and was still falling rapidly.

Now and again came a low moaning sound, as when the wind sweeps the telegraph wires. Light puffs of air began to come from all quarters, while the smoke from the chimney ascended high into the air in a vertical column, but with a curious swirling motion. We had not long to wait. Nature in tropical regions effects changes and rectifies disturbances with a rapidity unknown in more temperate latitudes; even the sea-birds seemed to know a storm was at hand, as they sat on the water heedless of our proximity.

The sea and clouds on the horizon appeared to approach each other, until the distinctive features of each were lost in their union; and now the clouds around us seemed to descend like a pall, hemming us in on all sides. The yellow sun blazed fiercely over us, his rays as if concentrated in a focus on our devoted heads. Far up in the air a dark mass of cloud bore swiftly forward, and as it crossed between us and the sun, its black edges were lighted up as if it was lined with burnished silver. At once, and as if by magic, it appeared to sweep away the daylight before it, and we were left in that mysterious darkness which often precedes a violent storm in these latitudes. We waited in awe-struck expectancy, as for some terrible calamity. Then came a rush of wind, with a flash of lightning so vivid and appalling from its apparent proximity to us, that it appeared like a flash from the sword of the Destroying Angel. A sudden calmness followed, then a crash of thunder that seemed to shake the ship. The lightning then flashed and played around us incessantly, lighting up the gloom with a pale-blue radiance. And now, in the pauses between the rattling of the thunder, came the rushing sound as of mighty wings, and the storm burst upon us with irresistible fury, driving us before it at tremendous speed. The sea had not power to rise; the force of the wind kept it down; but swept the spray from its surface and filled the air with a heavy rain. The barometer had now fallen to 28 inches, and as we flew before the tempest for hours, the thunder and lightning never abated during all that time. To add to the confusion, the wind catching some of the sails, tore them from their fastenings and flung them far away to sea.

We had as yet experienced no great inconvenience except from the thick darkness and blinding spray; but the wind suddenly veered round to the south-east without losing its force; and then came a tumbling, boiling, dangerous sea. It soon rose with frightful rapidity; and in dread that a sea breaking on board of us might burst through the frail barrier we had erected on deck, and fill the ship, I spent hours of anxiety, that even now, after the lapse of years, is not a pleasant recollection. Yet in that terrible cross-sea the brave vessel kept her head well up; and though she rolled her gunwales under water, yet up to this time there came no heavy or destructive 'green water' on board, and I began to breathe more freely as I saw her behaviour in the trying position we were in.

Not, however, in this direction as it appeared lay our danger. The storm of wind and rain had passed, and the sun had again shone out in splendour; but now the sea began to rise in long rolling waves, outstripping us in speed; and this

is always a trying time for the engines in a steamship, for the propeller is sometimes buried deep in the sea, as when a wave overtakes a ship, lifting her stern, and then as it passes on, still bearing up the stern, leaving the screw out of the water. The resistance being thus removed, the engines 'race' with tremendous velocity; and the screw being suddenly immersed, all the moving parts of the engines are subjected to an abnormal strain, resulting in a break-down, unless great care and watchfulness are exercised. At the same time, the propeller losing its efficiency, the speed of the ship is decreased, and a following sea is liable to break over the stern—usually the most dangerous sea that can strike a ship. Again the wind drew round towards the west, increasing the height and velocity of the waves, and we received two or three sharp blows, which made everything quiver visibly. The day was now drawing to a close; the clouds swept wildly across the sky, and as the sun dropped suddenly below the horizon—'at one stride came the dark.' But still the ship held bravely on before the wind and sea, rolling, pitching, and quivering like a frightened creature who tries to escape a deadly pursuer. A long night followed. A few seas came on board, sweeping the decks, to the intense discomfort of those passengers who could not trust themselves below—a night of dread and anxiety to every one. At sunrise the wind again freshened, and the barometer, which had risen during the night, began to fall ominously. A wild morning, with dull heavy clouds sweeping the sky. The sea was again rising fast, and long rolling waves, tipped with white crests, followed in rapid succession, tumbling the huge vessel about as a child sports with a plaything. The shocks from the waves came more frequently, and now and again a mimic sea fell on board and swept forward. I urged the captain to put on more sail, as I could do no more than we were doing, with the engines. And now while we were talking, a huge black mass of water, rising far above the stern, came rushing on, striking us on the quarter, and then the green sea came pouring forward, sweeping everything before it. We had only time to grasp the rigging and hold on for our lives as the wave swept past. The engines seemed to stand still for a moment, and then went whirling round with inconceivable rapidity; the blades of the propeller were broken clean off, the engines were useless; while the sea was pouring into the ship like a cataract through the burnt decks.

I clambered towards the engine-room; but one glance to the stern shewed the ship had lost her power of steering, and was falling off into the trough of the sea. Had we at last reached the climax of a hopeless case, and was the supreme moment of our lives come? flashed across my mind. I managed to get to the engine-room, and at once started the engines to pump the water out of the ship, using the water from the *inside* of the ship for condensing the steam, instead of taking it from the *outside*. By this means a very large quantity could be ejected, and by this means only. I had a dull feeling that it was all of no use; but there was work to be done, and it kept the men employed. Yet I knew it was useless work. As the ship was rolling fearfully, the water rushed past the pumps from side to side, drowning out the fires in the boilers at each side. I clambered

on deck to see what our condition was. One look was sufficient. The sailors, roused to a sense of immediate danger, at the risk of their lives sprang into the rigging as the ship swung round, and made gallant efforts to get the fore and aft sails on the ship forward. One after another of them were bruised and disabled; but they persevered manfully, and at last two of the fore-sails were got to draw, and the ship came slowly round. It was the work of hours, and had been a service of great danger, bravely accomplished. We read of a ship being struck by a sea: but how few know the terrible meaning the words convey. Unable to rise with the waves as they came rushing on, the water fell on the decks like solid masses, but chiefly on the stern, where the bulwarks remained. Sometimes she lay down on her side as if unable to rise, and then slowly fell away in the opposite direction. The shocks the hull of the vessel received were terrific. In such a case the water does not yield, as might be supposed; it really gives a solid blow, though not localised, as when a ship strikes a rock, but spread over a large surface; and unless this were so, no vessel could be constructed strong enough to withstand the heavy shocks experienced in a severe storm.

The scene on deck was appalling. The hand-rails were bent and twisted as if they had been made of wire. Bulwarks, deck-houses, boats, and everything intercepting the sweep of the sea, had gone overboard. Providentially, the planks we had fastened down over the open space left by the fire remained firm, the strong tarpaulin serving to bind them together. The quantity of water which had got into the engine and boiler rooms was enormous, but comparatively little anywhere else; so by opening the sluice-valves in the bulk-heads, communicating with the hold, the water was lowered by being spread over a larger area, and we could once more light the fires to pump the water out. We had now got all sails on the ship; and as there was no drag from the screw, the ship steered well, and was making ten knots an hour. But as if 'unmerciful disaster' was to follow us through this voyage, a new cause for anxiety awaited us. As I have said, we used the engines for pumping the water out of the ship; we worked all through the night, but yet the water got no lower; and as we were now running pretty steadily, we could see from a mark that it remained nearly always at the same point. On the following morning I stopped the engines to see if there was any increase, and in the course of an hour it had risen three inches. We examined all communications with the sea—that is, pipes and cocks, and found that the water while rolling had broken one of the sea-cocks off from the hull of the ship, and the sea was pouring in through the break. It was impossible to repair it at sea; there was no help for it but to keep the engines working to enable the ship to keep afloat.

I had just made this discovery, when I was summoned to the saloon to meet the captain and a number of the military officers. I saw from my reception that I was about to be blamed for a good deal of our bad fortune. 'Why did I insist on proceeding on the voyage after the fire?' 'Why had I prevented the ship being run on shore?' And a host of questions were rapidly put to me, which could only have their origin in the unreason-

ableness of extreme terror. What could I say? As matters had come round, perhaps there was some excuse for the absurd questions. At length I replied: 'Surely they could not imagine I was going to throw away my own life and that of others from a feeling of pure obstinacy? How could I or any one foresee the storm we had passed through? And were it to do again, I could not say I could decide differently from what I had done. We were now well clear of the land; and though we had not steam to help us, yet we were a sailing-ship with a fair wind, and not quite a disabled steamer, since the propeller was no longer a drag on the vessel.'

My reply seemed to restore a better feeling, if not to have a reassuring effect. After long discussion, we concluded to proceed by the Azores, and if necessary put in at Fayal. Meanwhile it was thought expedient to put every one in the vessel on half-rations, in the fear that we might have a protracted voyage. The barometer remained without much variation at 29 inches, and with a fresh breeze we kept up a steady speed of ten knots per hour. How our hopes rose and fell with the barometer or with the wind! We passed the Azores in the night with a strong breeze, and then came light winds, calms, and again a fresh breeze. At length, after forty-two days from starting homeward, we were off the coast of Spain, and soon arrived safely at our destination; thus concluding a voyage memorable for disaster, chiefly through want of preparation, forethought, and a reasonable amount of care in sending the ship to sea; conditions so essential and necessary in all that relates to ships and those who go to sea. How much is due to Mr Plimsoll for his energetic and forcible appeals, only those whose business it is to go 'down to the sea in ships' can fully know and appreciate.

MARGARET SEFTON'S SETTLEMENT.

CHAPTER I.

'COLONEL SEFTON, sir,' one afternoon announced my office-boy, as he threw open the door of the room with a bang, and raised his hand to his forehead with what I presumed he intended to be a military salute; for Arthur has a greater admiration for the army than for the desk. I cordially welcomed my old friend, whilst I secretly wondered at his appearance in my office, as, having a wholesome dread of the law, he but seldom troubled the realms of tape and parchment with his presence.

Colonel Sefton, an old East Indian, had comparatively late in life married a beautiful girl. Despite the disparity between their ages, it had been a genuine love-match, for youth does not monopolise all the love in the world. The ripe manhood of middle age can inspire as deep a passion as the more youthful heroes of life. One brief year of happiness followed, and then a life was given and a life was taken, and the bereaved husband was left to mourn the girlish mother, whose short life had closed in giving a son to the world. Devotedly attached to the memory of his wife, he never allowed another to take her place; although many

were the candidates who were eager to act the part of consoler to the handsome widower.

Two years after Mrs Sefton's death, the Colonel returned to England, bringing with him his motherless boy, a bright-faced golden-haired little fellow, who, with his mother's fair complexion, had inherited his father's handsome features, but without their severity. They were softened by a bright winsome expression, which awoke fond remembrances of the mourned-for mother, left to sleep her last long sleep in that distant land where friends are few and strangers many. The Colonel had been home but a few months when a distant relative died leaving an infant daughter and her fortune of nearly eighteen thousand pounds to his care.

The motherless boy and orphan girl thus thrown together had been brought up as brother and sister. I, once, had laughingly suggested to the Colonel that perhaps some day a closer tie might exist between them. 'Heaven forbid!' he had cried warmly. 'I would disown Walter, sooner than such an event should happen. He will have nothing but his brains to depend upon when I am gone. My income dies with me; and I have not saved much. No, no; it shall never be said that I secured Margaret's fortune for my penniless son. I have no fear of such a result,' he continued with a smile as he regained his composure. 'Walter is soon going to college; and in another year Margaret will have made her first bow to Society. They will never think of each other than as brother and sister, so long as no restraint is placed upon them.'

There was a certain amount of wisdom in the Colonel's idea. But who can control the wayward fancies of the youthful heart? A short time before my story opens, Walter had sought his father's permission to pluck the forbidden fruit. Treating the matter lightly, the Colonel had tried to chaff him from his purpose; but finding that he was serious, had grown angry. A stormy scene ensued, and bitter words were spoken between father and son—words springing from the heat of passion, and not from the heart, yet with equal, if not greater power to open a rankling wound, that scarce a lifetime's repentance can heal. Opening the door, the Colonel passionately bade his son leave his presence, and never return until he had learnt the respect due to a father. Walter was my godson, and I had a great affection for him; and so, at the risk of offending my old friend, I—while taking care not to under-rate parental authority—assisted the lad to obtain suitable lodgings, and bade him welcome to my table at all times.

At first he was very bitter against his father, and declared that nothing should separate him from his affianced wife; and strong measures were threatened, in which elopements and secret marriages took a strong part; but after a few weeks he rather suddenly dropped the subject, and seemed to acquiesce in his fate. I was surprised at this unlooked-for change, and, knowing his impetuous fiery disposition, I ought to have had my suspicions aroused; but with complacent self-conceit, I set down the cure to my fatherly arguments and admonitions. I soon succeeded in obtaining for him a very good berth in an Insurance office. To my great relief, he settled down quietly and steadily to work; and as Margaret uttered no murmurs, I indulged in the hope that it had been

but boy-and-girl love, and that the restoration of the family peace would be only a question of time.

Colonel Sefton, when ushered into my office, as indicated at the commencement of this story, rather pompously seated himself, and unbuttoning his coat, stretched out his hand towards me. 'Congratulate me, my friend,' he said in a self-satisfied tone—'congratulate me.'

I accepted his proffered hand, and begged to know why he was to be congratulated.

'A husband for my Margaret,' he replied—'a man every way worthy of her; of the highest principle; and her equal in fortune, in position, and birth—at least—that is—ahem—he is most accomplished, and will be to Margaret an affectionate husband, and to me—in my old age—an affectionate and *dutiful* son.'

The stress on *dutiful* was intended as a rub against me for my friendliness to poor undutiful Walter.

'It is true,' continued the Colonel, 'that old Mr Mainwaring was in what might be called trade; but that is no disgrace to the son. If the father did sell iron behind the counter, the son now digs it from the mines bought with that parent's honest earnings; and surely the possession of wealth is not incompatible with that of merit? In these days of School Boards and advanced civilisation, social prejudices must go to the wall, and merit and talent will make their way to the front.'

I did not dissent from the truth and morality of these aphorisms; but I was rather surprised at the amount of protestation and argument in this lengthy harangue. The Colonel at first spoke nervously, but gradually his tone got warmer as he grew excited with his theme. It seemed as if he were answering objections before they were raised. Colonel Sefton was a warm-hearted impulsive man, and rather apt to take strong prejudices. Blinded for the time being to all other considerations save the paramount object, his conduct was not without a taint of selfishness—a fault not uncommon with self-willed people. Like others of his temperament, he was inclined to deceive himself and others—almost unconsciously—by representing facts not as they were, but as he would wish them to be.

I saw that he was seized with some unexplained prejudice in favour of Mr Mainwaring's son. I was afraid to say very much, as my old friend seemed to be in a somewhat testy and irritable mood. I simply asked the gentleman's name and position. 'Owen,' came the answer—'Owen Mainwaring, iron-master and mine-owner. Half the mines in North Wales belong to him.' The Colonel was at times rather prone to exaggerate, so I took the boast for what it was worth. 'He is distantly connected with several influential families,' he continued. 'He is such a perfect gentleman—so refined and polished. I wish that my poor misguided boy were more like him. In fact, I think I am extremely fortunate in securing so desirable a match for my little girl.'

I did not quite relish the uncalled-for sneer at Walter, for he certainly answered to my ideas of a thorough gentleman. It was not, however, for me to object, if the young lady loved this manly paragon, and he had her guardian's approval; so I confined my remarks strictly to business. The

marriage was to take place that day month. It was rather soon; but, as the Colonel explained, somewhat apologetically, Mr Mainwaring was not a young man, and he was eager that there should be no delay in providing his home with a mistress and himself with a wife. They were to go to Paris for a short honeymoon; and on their return, Mr M. intended purchasing some large estate a short distance from London, where they would reside. Notwithstanding his boasted wealth, he objected to settle any of it on his intended wife; but was quite willing that the whole of her fortune should be secured to herself. He promised, however, to make a will providing for her handsomely in the case of his death. It was not so good as a settlement, for a will can easily be revoked or altered; but as the Colonel was satisfied, I had to acquiesce in the arrangement. We agreed that a deed should be prepared settling Margaret's fortune upon trust for the benefit of herself and any family she might have. The Colonel, on account of his failing health, felt reluctant to accept the responsibilities of a trusteeship. I was nearly the same age as he was; but at his especial request I consented to undertake the office—an old merchant of tried stability being my co-trustee.

'By-the-bye,' said the Colonel, rising to leave, and helping himself rather nervously to one or two copious pinches of snuff, 'I suppose you will tell Watty—Walter, I mean,' correcting himself as the old pet name inadvertently fell from his lips. 'Not that it matters at all. I have quite done with him—quite.'

'I am sorry to hear it,' I replied gravely. 'I was hoping that the past would now be at an end. I really believe that Walter has conquered his feelings with regard to Margaret, and that the day which sees his hand again clasped in yours will be one of the happiest in his life.'

The Colonel hesitated a moment, and I think underwent a sharp mental struggle; but pride, that dire enemy to all peace and happiness, overcame the natural promptings of his good sense, and stifled the yearning impulse of the father's heart. Ignoring what I had said, he buttoned his overcoat and slowly walked towards the door. Pitying the old man, I said nothing more on the subject, but intimated that I should like to meet Margaret's intended husband. 'Oh, of course—of course,' he rather hurriedly assented. 'Come round some evening. He is sure to be with us.' The invitation was not given very warmly, and for the moment I felt slightly nettled; but, for Margaret's sake, I smoothed my ruffled feathers, and resolved to see this model of perfection that was about to take poor Watty's place.

'The draft of the settlement will be ready by Monday,' I cried after the Colonel as he left the room; 'and I will look in with it after dinner. Margaret will give me a cup of tea, and we will have one of our old quiet rubbers.—Mr Mainwaring can take Watty's place, you know,' I added, somewhat maliciously.

'Do so, by all means,' sharply replied the old man, without noticing the innuendo, as he left the room. 'We shall be pleased to see you.'

'Margaret may,' I said to myself as the door closed; for I felt assured of her welcome, if I was doubtful of that of the others.

I suppose it is the nature of my profession which makes me suspicious. I often wish that I

could be more trusting, and not so much given to weighing each word and deed. Apart from impulse, there is always to be found some motive or main-spring behind each action in life. Once discover the motive, and you have the key to the position. As soon as Colonel Sefton had left me, I began puzzling my brains for an explanation of the unwonted restraint in his manner towards me, also for his anxiety to convince me of the desirability and advantages of Margaret's marriage with this Mr Mainwaring. I felt uncomfortable; for the Colonel was apt to become very blind when riding a hobby-horse. His ward's marriage was evidently the steed he was now riding; and I greatly feared lest, in his eagerness to reach the goal of his desires, he should neglect the precaution of ascertaining whether the steed was properly shod, or that the curb was well in hand. Continuing these unsatisfactory cogitations, I prepared to leave the office.

Sending the boy for a hansom, I stood on the door-steps awaiting it. Facing me—on the other side of the road—was a large shop, a hosier's. It was brilliantly lighted from the outside. I was looking in its direction, when suddenly the door opened, and Colonel Sefton appeared, arm-in-arm with a tall middle-aged man with small red whiskers. He wore a large gray Inverness cape, and a white muffler covering his mouth. I had a good view of his face, for he stood directly under the gas lamps, and the light fell full upon it as he moved his muffler aside to hail a passing cab. I watched them get into the dingy vehicle, which, like the rest of its species, slowly crawled away. While I was watching them, Arthur appeared with the hansom for which I had sent him. Before, however, I had time to walk down the steps, a strange man who, unobserved by me, had been standing on the edge of the pavement just in front of me, sprang into it, and pointing to the slowly vanishing four-wheeler, in excited tones promised the driver double fare to follow it at a short distance and not let it get out of sight. Away bowed the hansom, and Arthur and I were left shivering in the cold, discomfited and cabless!

For the moment I had been too much astonished to assert my prior claim to the hansom; for I had recognised the strange man by his voice and features. It was Thomson the detective!

IRISH BULLS.

'WHAT is an Irish bull?' was asked one day by an ignorant person desirous for information. 'Oh! everybody knows *that*,' was the rather contemptuous answer of a mixed company. But like a great many of those things that everybody knows, it proved a knotty point, which could not be solved without a little trouble and reflection.

Miss Edgeworth in her essay on *Irish Bulls and Blunders* lays it down as a principle that the essence of a bull must consist in a laughable confusion of ideas. But this hardly goes far enough. A bull is this undoubtedly, but it is something more; for a laughable confusion of ideas does not always result in a bull. Not only must there be a laughable confusion of ideas, but this confusion must result in a contradiction of meaning—one

part of the sentence must be such as utterly to contradict the other part. The statement must not only be absurd; it must be impossible. If the thing alleged were as it is stated, it would have ceased to be what it is alleged to be at all, but would have become something else totally different, and quite at variance with the rest of the sentence. For instance, the man who on tasting an apple-pie with some quinces in it, burst out with the exclamation: 'How delicious an apple-pie would be if it were made entirely of quinces!' gave a good specimen of an Irish bull; for if the pie were made entirely of quinces, it would not be an apple-pie at all, but a quince-pie. So also the sailor who had taken a dislike to a ship, when he was told that he might safely trust himself to her, and that she was finely copper-fastened, answered: 'Thank'ee sir: I would not sail in her if she were coppered with gold;' thus making a genuine Irish bull. Here we have in perfection a contradiction of meaning; just as in that amusing newspaper announcement which tells us that the '*temporary* works round Hassell are intended to be *permanent*;' and in that passage in a certain book of travels which informs us that in some French iuns the '*maid-servants* are all *men*.'

Those who make bulls are always blissfully unconscious that they are doing so. In fact, one reason why the blunder occurs at all is that the perpetrators are in such a violent hurry to express themselves, that they do not stop to weigh their words, but bring them out topsyturvy, pell-mell, any way that comes first. They know very well what they mean themselves. They are like a child running to catch a ball; in their speed they fall down and trip; but they have caught the ball safely in their own hands, and only wonder what the bystanders can see to laugh at. Those who indulge in metaphors and impassioned language of any kind are on ticklish ground; poets of every age have given us figures of speech which if not bulls *pur et simple*, trespass very closely to the dangerous border-land which divides the sublime from the ridiculous. We often find the cart put before the horse, and statements made so needlessly strong as to be absurd, in some even of our best authors. Juvenal, for instance, informs us that poor Codrus had nothing and yet withal he was robbed of that nothing; and in the *Timon* of Lucian the following dialogue occurs:

Quatho. I will summon you before the Areopagus for injuring me thus.

Timon. Stay but a short time, and you will have the opportunity of accusing me of your murder too.

In Milton, there are a great many flights of expression which will hardly bear to be pulled to pieces. For instance, his well-known line in *Samson Agonistes*:

The deeds themselves, though mute, speak loud the doer.

We know quite well what is meant—we do not care to pull the expression apart—but there is certainly a contradiction in words. If the deeds were really mute, how could they speak loud? So also when Satan describes his dreadful feelings and says :

And in the *lowest* deep, a *lower* still,
That threatens to devour me, opens wide.

Here the poet's daring imagination has lifted him out of ordinary every-day expression; he has snatched a grace beyond the realms of common-sense. If strictly analysed, his words could not mean literally what he says. Of course, we allow for this; we call it poetical license, a figure of speech, fine bold imagery; but if used in ordinary language, it would sound so exaggerated as to be absurd, and we might begin to whisper of the objectionable 'bull.' Irish people being specially smart in their speech and metaphorical in their language, are peculiarly liable to the droll blunder.

To trace the word from its earliest origin is no easy matter. Some suppose it to be derived from the old German word *bollen*, to speak foolishly; hence comes *bole* or *bull*. In support of this derivation, we find that Chaucer uses the word *bole* for blunder or bull.

There is a curious passage in the works of Taylor, the Water-poet, which shews that in 1630, though the word bull had not become identified with the Irish people, yet that the power of making this special order of blunder existed among them in full force. 'Nowe,' he says, 'that Irelande doth give birth to strange sortes of men, whose too greate quicknesse of thought doth impede their judgements, this storie which I have heard will shewe. A wealthie lord of the countie of Corke had a goodlie faire house new built, but the broken bricks, tiles, sande, lime, stones, and such rubbish as are commonlie the remnants of such buildings lay confusedlie in heaps, and scattered here and there. The lord therefore demanded of his surveyor wherefore the rubbish was not conveyed awaie. The surveyor said that hee proposed to have a hundred cartes for that purpose. The lord replied that the charge of cartes might be saved, for a pitt might be digged in the grounde, and so burie it. "Then, my lord," said the surveyor, "I pray you what will wee doe with the earth which wee dig out of this said pitt?" "Why, you coxcombe," said the lorde, "canst thou not digge the pitt deepe enough to hold rubbish and all?"—This would indeed have been a practical bull, only equalled by that of the man who sat before a looking-glass with his eyes shut, in order that he might see how he looked when he was asleep, reminding us of a characteristic title of an old Irish jig, 'I'm asleep and don't wake me.'

But to return to the rise and progress of bulls in the United Kingdom. Most of us know how one of Dryden's plays was condemned by the

severity of the Duke of Buckingham's witticism on the line :

My wound is great, because it is so small.

To which the Duke dryly replied :

Then 'twould be greater were it none at all.

There could hardly be a more delicate play on words by which the Duke made the bull in Dryden's line at once startling and ridiculous. In *Tom Jones*, Fielding says: 'I have heard it remarked by a friend, that when a child is doing nothing, he is doing mischief.' Therefore we see that bulls were perpetrated in England by the greatest masters of the English language, though the expression itself was as yet scarcely received into the regular army of accepted words, or become identified with the Irish people. Dean Swift in a letter to Pope says that he is thinking of writing an essay on English bulls and blunders; so that the word was even then hovering about in a transition state, without a local habitation. It was only towards the end of the last century that the word 'bull' had become common, and was handed over by universal consent to the Hibernian people as their peculiar property. The most notorious bull perpetrator was Sir Boyle Roche, who was elected member for Tralee in 1775. He had a regular blundering reputation. He was known upon one occasion, after a withering exposure or patriotic denunciation of government, to say, with solemn gravity: 'Mr Speaker, it is the duty of every true lover of his country to give his last guinea to save the remainder of his fortunes!' Or if the subject of debate was some national calamity, he would deliver himself thus: 'Sir, single misfortunes never come alone, and the greatest of all national calamities is generally followed by one much greater.'

Sir Boyle Roche belonged to the ancient family of De la Russe of Fermoy; he was created a baronet in 1782, and was married to the eldest daughter of Sir James Caldwell, but had no heir. He used to account for his lack of progeny by saying 'that it was hereditary in his family to have no children.' Another of his blunders was made when speaking of the fish-hawkers. 'They go down to Ringsend,' he observed, 'buy the herrings for half nothing, and sell them for twice as much.' A letter supposed to have been written by Sir Boyle Roche during the Irish rebellion of '98, gives an amusing collection of his various blunders. Perhaps he never put quite so many on paper at a time; but his peculiar turn for 'bulls' is here shewn at one view. The letter was first printed in the *Kerry Magazine*, now out of print.

DEAR SIR—Having now a little peace and quiet, I sit down to inform you of the bustle and confusion we are in from the blood-thirsty rebels, many of whom are now, thank God, killed and dispersed. We are in a pretty mess; can get nothing to eat, and no wine to drink except whisky. When we sit down to dinner, we are obliged to keep both hands armed. Whilst I write this letter, I have my sword in one hand and my pistol in the other. I concluded from the beginning that this would be the end; and I am right, for it is not half over yet. At present, there are such goings-on that everything is at a stand-still. I should have answered your letter a fortnight ago; but I only received it this morning—indeed, hardly a

mail arrives safe without being robbed. No longer ago than yesterday, the mail-coach from Dublin was robbed near this town; the bags had been very judiciously left behind, for fear of accidents, and by great good-luck, there was nobody in the coach except two outside passengers, who had nothing for the thieves to take. Last Thursday, an alarm was given that a gang of rebels in full retreat from Drogheda were advancing under the French standard; but they had no colours nor any drums except bagpipes. Immediately every man in the place, including women and children, ran out to meet them. We soon found our force a great deal too little, and were far too near to think of retreating. Death was in every face; and to it we went. By the time half our party were killed, we began to be all alive. Fortunately, the rebels had no guns except pistols, cutlasses, and pikes; and we had plenty of muskets and ammunition. We put them all to the sword; not a soul of them escaped, except some that were drowned in an adjoining bog. In fact, in a short time nothing was heard but silence. Their uniforms were all different—chiefly green. After the action was over, we went to rummage their camp. All we found was a few pikes without heads, a parcel of empty bottles filled with water, and a bundle of blank French commissions filled up with Irish names. Troops are now stationed round, which exactly squares with my ideas of security.—Adieu; I have only time to add that I am yours in haste.

B. R.

P.S.—If you do not receive this, of course it must have miscarried; therefore I beg you write and let me know.

No one has ever been found exactly to fill Sir Boyle Roche's place as blunderer-extraordinary; but the most amusing instances of bulls do constantly crop up on Irish ground, and shew that their legitimate resting-place is the Green Isle. Take, for example, the following genuine notice on an Irish church-door: 'This is to give notice that no person is to be buried in this churchyard but those living in the parish. Those who wish to be buried are desired to apply to me, Ephraim Grub, parish clerk.'

Here is another kindred specimen: 'NOTICE.—The churchwardens will hold their quarterly meetings once in six weeks, instead of half-yearly, as formerly.'

In the April of 1806, the following bill was stuck up: 'This house to be let for ever, or longer if required.' Such a house would quite match the gown mentioned by Miss Edgeworth, 'which would wear for ever, and might be converted into a petticoat afterwards.' Another peculiar garment is described in one of Lady Morgan's earlier novels as being composed of 'an apparent tissue of *woven air*.'

It is strange, when we come to think of it, how many errors which partake of the nature of bulls have become mingled with our daily speech. We speak of 'lighting the fire,' when it is not the fire, but the coals and kindling which compose the materials for it that we light. We speak of boiling the kettle, when it is not the kettle which we boil, but the water that is in the kettle. If every word were strictly analysed, we should often find that even the wisest of us are not entirely free from that species of blunder which is conveniently known by the name of an Irish bull.

A CURIOUS RELIC.

A curious relic of one of the expeditions which sailed to the West Indies under the command of Columbus has, it is stated by a Martinique journal, recently been discovered. On the 4th of August 1498, a small squadron of three vessels under the orders of Christopher Columbus was anchored off the south-western extremity of the island of Trinidad. Late at night, Columbus, it is related by Washington Irving, suddenly saw a wall of water approaching towards the fleet from the south. His own vessel was lifted up so high by the oncoming wave that he feared it would be either submerged or dashed on shore; while the cable of one of the other ships parted under the strain to which it was subjected. The crews of the vessels gave themselves up for lost; but after a time the wave—which it is surmised must have been caused by an exceptionally large body of water coming suddenly down one of the rivers flowing into the Gulf of Paria—ebbed back again. This sudden rise of the waters of the gulf is mentioned by Columbus's son Ferdinand, who adds that the fleet suffered no damage save the loss of one anchor. It is this anchor which has now been found; and strangely enough, it was dug up from a depth of six feet below the surface of the ground, at a spot three hundred and seventy-two feet from the nearest point of the coast-line. The land, it is well known, is gaining upon the sea along the shores of Venezuela, so that where once ships rode at anchor, gardens are now planted. The anchor itself is of simple form and comparatively rude manufacture, the stock being eight feet long, and round, with a ring at one end one foot in diameter to which to make fast the cable, and with flukes five feet long, the whole weighing eleven hundred pounds.—*Newspaper paragraph.*

FLOWER AND FRUIT.

On foreign flower of love, who set
Within my plot thy seed,
That I with bitter tears must wet,
Through painful days must heed?

What benediction thrice bestowed,
What secret care and toil
Hath made my field so waste, that shewed
For thee a fitting soil?

Why dost, with subtle choice and care,
Thy growing fibres feed
With odours of the earth and air,
With juice of withered weed?

The thorns that hedged my garden sown,
Thy growth hath pushed aside,
And all the land once called my own
Lies open, fenceless, wide.

O Love, strike deep thy living root!
If all for thee I give,
Thou givest all, if of thy fruit
I take, and taste, and live.

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 828.

SATURDAY, NOVEMBER 8, 1879.

PRICE 1½d.

LIFE IN A HUDSON BAY COMPANY'S FORT.

THE Hudson Bay Company is a corporation of traders (chiefly in furs) who in the time of Charles II. were granted the exclusive right of trading in all the lands which poured their waters into Hudson's Bay or Hudson's Straits. For over a century their operations were confined to the territory bordering on the coast, when the keen rivalry of the French led them to make advances towards the interior. Under the name of the North-western Company of Montreal, a rival society was established in 1783, planting stations beyond the Rocky Mountains, and exciting a violent contest for supremacy until the year 1821, when an amicable settlement was accomplished. An extension of their powers was then secured, and up till 1859 the corporation had the entire possession of the greater part of British North America. In 1869 their territories were annexed to the Dominion of Canada, three hundred thousand pounds being paid as indemnity. Important stipulations were, however, made on the part of the Company, that they should retain all their forts, with ten acres of ground attached to each, and one-twentieth of all the land from Red River to the Rocky Mountains. The Canadian government we are glad to state have latterly entered into amicable treaties with the Indians, which leaves the red-skin free to deal with the pale-face.

The Company's territory is now organised under three divisions: Manitoba with its rich grain-producing soil; Keewatin, lying east and north of Manitoba; and the North-west Territory, embracing all the region between these and British Columbia. To give the reader some idea of the traffic, it may be interesting to state that the proceeds of furs and other materials sold during 1876 were L.291,566, and that of this sum over ninety thousand pounds stood for profit.

The following notes will give an insight into the practical working of the Company and the social life of its servants.

The people resident in a Hudson Bay Company's post form a community of themselves, more or less gregarious, as the establishment is designed for trading purposes, a depôt of supplies, or merely an isolated stockade for the accumulation of provisions for the use of the larger forts. But of whatever character the place may be, a regular business routine, demanding certain times for the performance of special duties, is strictly observed. Every member of the community, from the factor or clerk-in-charge to the cook, is expected to be, and almost invariably is at his post of duty at the time designated for its special performance. To this system is due the close economy with which the affairs of the Company are conducted and the perfect understanding of the petty details of every branch of its business on the part of its employes. For example, a clerk in the service, in the great majority of cases must remain a simple clerk for a term of fourteen years before he is considered as being in the line of promotion. During these long years of service, he must perforce gain a thorough practical knowledge of the duties, and even of the most trivial details relating to his station. From long custom he falls into the beaten channels of the trade, its manner of executing business details, and identifies himself with its traditions. So, when he assumes charge of a post or district, he carries with him, to assist in the discharge of his new responsibilities, that punctuality, method, and careful regard for the little things of his position which he has so well learned in his apprenticeship.

The real life of the fort may be said to begin at the breakfast-hour, which is as regularly appointed as those for the despatch of business, the nature of which we shall presently explain. The breakfast-time with the lower class of employes, the nature of whose duties demands early rising, is about six o'clock in the winter and five in the summer season. These servants mess by themselves, drawing rations at regular intervals through a steward, much after the fashion of army-life. A cook is appointed from their number,

who performs his duty alone, and is responsible for the provisions, quantity and quality of food, &c. A short season, generally devoted to pipe-smoking, is allowed after each meal, when the servants separate to their various duties.

The arrival of a traveller from the outer world is the greatest episode in the monotonous every-day life of the post. The community find in him an inexhaustible fount of enjoyment; and if he be of a communicative disposition, his store of news and narrative will do service in payment of his weekly board-bill for an indefinite period. To such a one, much more than to a passing officer from another fort, the hospitalities of the fort are extended in the most liberal manner. An apartment is assigned him for his sole occupancy during the period of his sojourn. He is free to come and go when and where he listeth, means of locomotion being furnished on demand. His companionship is eagerly sought by all; and the fortunate individual who secures his preferred acquaintance excites at once the envy of less favoured ones. Nothing is left undone to prolong his stay, and when he finally departs, he is sent upon his journey freighted with the good wishes of the isolated post, and is certain of the same cordial treatment at his next stopping-place.

The mess-table has, too, other attractions than those of sociality, and of a more substantial kind. The officers of the forts are all good liveries, and although accustomed to rough it on short allowances of food when necessity requires, take particular care to have the home larder well stocked with all the delicacies afforded by the surrounding country. The viands are of necessity composed for the most part of the wild-game and fish in which the prairies and waters abound. But they are the choicest of their kind, being selected from an abundant supply. One gets there the buffalo-hump, tender and juicy; the moose-nose, tremulous and opaque as a vegetable conserve; the finest and most savoury water-fowl; and the freshest of fish—all preserved by frost instead of salt. True, the supply of vegetables at many mess-tables is woefully deficient, and a continuous diet of wild meats, like most other things of everlasting sameness, is apt to pall upon the appetite. But the list of meats is so extensive, and each requiring a particular mode of cooking, that a long time may elapse without a repetition of dishes. Then, too, the climate favours the consumption of solid food; and after a short residence, the appetite becomes seasoned to the quality of fare obtainable. Bread, as an imported article, is in many cases regarded as quite in the character of a luxury; the few sacks of flour which constitute the annual allowance of each officer being hoarded away by the prudent housewife as carefully as the jams and preserves of her more fortunate sisters. In such cases it is baked into small cakes, one of which is placed beside each plate at meal-time; the size of the cake being so regulated as to afford a single one for each meal during the year. The more common vegetables, such as potatoes and turnips, can be successfully cultivated in some places, and wherever this occurs, enter largely into the daily menu.

The business of the post, with the exception of the necessary employments of the lower servants, is transacted between the hours of nine in the morning and six in the evening, with an interval

of an hour between two and three o'clock for dinner, when the offices and stores are closed. During the hours of business there is much to be looked after, especially in the summer season. When the bell announces the opening of the fort-gates, the inclosure soon fills with Indians and traders, who besiege the counter of the trading store, or lounge idly about the yard—picturesque vagabonds in motley attire. The clerks in charge are busily engaged in measuring tea, sugar, ammunition, &c. into coloured cotton handkerchiefs unwrapped from greasy aboriginal heads for their reception; in examining furs, and paying for them; in measuring off the scanty yards of blue cotton prints that are to clothe the forms of dusky belles; or causing howls of delight by the exhibition of gilt jewellery to be sold at ten times its original cost.

Outside the stockade the *voyageurs* are loading whale-boats in the adjacent stream with bales of fur for transportation to depôt forts, or discharging cargoes of merchandise destined for wide-spread distribution. Over this process an accountant keeps careful watch, as he does over everything involving a representative value, for which he will be held to account. All is bustle and activity; but there is no haste. The careful attention to details exhibits itself in everything, and the minutest watch is kept over all.

A Company's fort is seldom free from its complement of hangers-on. As the day advances, the arrivals at the fort increase in number and importance. Sometimes a large band of Indians will ride rapidly up to the stockade, and turning their ponies loose upon the prairie, enter upon the barter of small quantities of skins to supply their immediate necessities. Again, the band will encamp about the stockade, displaying for trading purposes the results of a long and successful hunt, and making the days and nights hideous with their heathenish festivities. Their camp-fires light up the plain round about with a fitful glare; their green-and-yellow-painted visages and blanket-attired forms assume by degrees a certain individuality, and even the more importunate beggars become familiar objects to the sight, when presto! they are gone, only to be replaced by others of a like description. There is, too, much bustle created by the arrivals and departures of officials from other forts of the service, *en route*, in charge of boat-brigades for distant points, who stop but for a few hours and are off again. Should the season be winter, however, the business hours are to a certain degree merely formal, and the time is occupied by those petty details which are to be found in any occupation.

At six o'clock in the evening the labours of the day terminate, and the members of the community are at liberty to do as they list. And these are the hours which drag most wearily upon each individual member. In the summer season, recourse is had to athletic exercises during the long twilights—rowing upon the rivers, pitching quoits, equestrian exercises, &c. being in vogue with the younger and more hardy clerks; others are attracted by the pleasures of the chase, and prolonged forays with dog and gun are made upon the wild-fowl in the neighbouring water-courses. But this vernal season is brief, and the time soon comes when the attractions of indoor life must supply the mental pabulum. With the officer in

charge, the long evenings are generally passed in the society of his family and in writing up the log-book of his post. This latter work, if he be a man given to composition, soon becomes a labour of love. In it he chronicles all the petty incidents of the day—the arrivals and departures, the principal receipts and expenditures, the health of the little community under his charge, &c. There may be added the general reflections of the writer on subjects pertaining to the service, and such suggestions as seem to grow out of the events noted. He may even wander to a limited extent outside the bounds of strict business matters, and indulge in little flights of composition on subjects irrelevant to the trade. It happens sometimes that short poems of greater or less measures of excellence, and short prose sketches of fair diction and vivid imagining, appear scattered among the bones of dry statistics. But it must be said of the majority of log-books that they smack only of weather-reports, the deficiencies of the frozen-fish supply, or the accumulation of peltry.

With the younger portion of the community—the clerks, apprentices, and postmasters—conversation and the peaceful pipe occupy a prominent position in the passage of time. Games, too, are in great demand, and every apartment possesses its well-thumbed pack of cards, its rude cribbage-boards, and sets of wooden dominoes. Reading men find abundant leisure to pursue their favourite occupation during the long winter evenings. Books, however, as private property, from the difficulty in transporting them, are more scarce than might be expected. To atone somewhat for this, the Company has established extensive libraries for the use of the officers and servants in many of the larger stations in the north, from which supplies for the adjacent smaller posts may be drawn, so that the diligent reader may command new supplies from time to time. Then, too, there comes once or twice during the winter season a red-letter day upon which the mail arrives, bringing a great budget of letters to be answered and periodicals from the outer world. In the answering of letters considerable difficulty is experienced from the absence of anything new to write about. To obviate this and produce the requisite novelty, the writer generally succeeds in composing a single letter having the desired degree of spiciness. This he copies, and sends to all those friends whom he is desirous of placing under the obligation of an answer. Thus, for many days after the arrival of a mail, occupation for the long evenings is easily found, until the returning dog-train bears his correspondence away, and with it that method of passing time.

Parties not studiously inclined often pass their spare hours in exercising their skill upon one of the musical instruments. Of these, the violin is most ordinarily selected; and the votary, after a series of years passed in sedulous practice, usually attains a certain ghastly facility of execution. So common an accomplishment indeed is fiddle-playing in the service, that violin strings are annually forwarded as a part of the regular outfit for sale in the northern districts. Under the inspiration of this instrument, it is scarcely to be wondered at that the few holidays of the year, and frequently the long evenings also, should be enlivened with dances, in which all the dusky maidens within hailing-distance of the fort parti-

cipate. It is in the enjoyment of this pastime that the wearied clerk 'snatches a fearful joy' as he jigs and reels the hours away to the measures of monotonous and oft-repeated tunes. On such occasions the company is cosmopolitan to a striking degree, and all grades of employes mingle on terms of the most democratic equality.

With such simple pleasures and in the discharge of such duties, the life of the isolated community glides uneventfully away. If its amusements are few, they are at least innocent and improved to the utmost. Few temptations to wrong-doing are presented to their solitary lives. Each succeeding year adds to the accumulations of the last, until, in the early afternoon of life, the Company's officer finds himself possessed of sufficient means to pass the remainder of his days under more genial conditions. But strange to say, it almost invariably happens that his old life has so grown upon him, so entirely possessed him, that the charms of a higher civilisation have no power to attract. Many bid a final farewell to the inhospitable regions where the best years of their lives have been spent, with the purpose of returning to their early homes to pass the decline of life; but one after another they drift back again. The change is too abrupt. They have outlived their former friends; their ways of life are radically different; in short, the great busy world moves all too fast for their quiet and placid lives.

MARGARET SEFTON'S SETTLEMENT.

CHAPTER II.

I HAD just finished dinner, and, with bachelor freedom, had discarded the frock-coat and walking boots of public life for the dressing-gown and slippers of domestic ease. I felt at peace with all mankind, for my dinner had been well cooked. It is a private opinion of mine that one half the troubles of domestic life can be kept in check by a well-regulated kitchen. Pulling my chair to the fire, I lit my favourite pipe, and settled down comfortably for my usual perusal of the evening paper. A ring of the bell and approaching footsteps warned me that my peaceful feelings were about to be put to the test. I dreaded the advent of a restless client—not one of the best of aids to digestion—for they sometimes bring their troubles to me, even at my private residence.

'Mr Sefton, if you please, sir;' and Walter was ushered into the room, thus considerably relieving my apprehensions.

'Ah! Watty, my boy, glad to see you!' I cried, throwing down my paper, with a mental groan at the interruption to its perusal, and giving him my hand. 'Draw your chair to the fire, and make yourself comfortable.—A glass, George, for Mr Sefton.—I think you will like that Scotch whisky, Watty. I can warrant it having the correct subdued mellow flavour that age alone can impart to the genuine article.' I rattled on joking and talking in a random way, for I felt rather cowardly about telling him of Margaret's engagement. My stock of small-talk becoming exhausted, I, at last, summoned up courage to break the news to him. 'Margaret is going to be married,' I said suddenly after a pause.

'Is she?' he remarked in a cool indifferent tone as he lit his cigar. 'So am I.'

'What!' I cried, fairly starting from my seat with surprise. 'You going to be married?' 'Yes; why not?' he asked, calmly looking me unflinchingly in the face.

I was too indignant to answer his question. All my sympathy for the poor discarded lover had been thrown away. Human nature is full of contradictions. Up to this time I had thought that, for the sake of peace and happiness, nothing could be more desirable than that Walter and Margaret should be weaned from their untoward attachment; but now all my feelings were abruptly overthrown. Margaret having so readily entered into another engagement, had increased my commiseration for Walter; but now he too proved forgetful and faithless. What did it mean? I sighed to myself as I gave it up in despair. How generations do alter! Love was not so ephemeral in my youth.

Walter deftly parried my questions as to his future bride. He laughingly refused me his confidence, under the impudent pretext that he would not burden my conscience with keeping a secret from his father. With the touchiness of age, I felt annoyed at his conduct, and shewed it by answering him sharply. Perceiving my annoyance, he dropped his bantering tone. 'Dear old friend!' he cried in a moved voice, while an honest flush spread over his bright sunny face as he affectionately placed his strong young hand on my shoulder. 'My secret is not my own, else I would tell it to you. Only trust me, and I will not disappoint you.'

'Well, be it so then Walter, my lad!' I cried, softened by this display of affection. 'Promise me that you will not marry any one to whom we could reasonably object, and I will try to be satisfied.'

He readily gave the required promise, adding that he would guarantee that his choice when known would have my warmest approbation.

Olden memories came thronging to my mind as Walter took his departure. 'Ah!, Mary, it was not to be,' I sighed to myself as I entered my solitary chamber, and took from my desk an old faded miniature and a soft golden curl. 'Forty years have passed away; but I have not forgotten!'

The draft settlement, which was to make Margaret custodian of her own fortune, was soon prepared, and on the Monday evening I took it with me to Harlowe Crescent—where Colonel Sefton resided—to discuss its provisions with him. The house was one of those comfortable, old-fashioned, roomy, square-built mansions, so rarely met with in this present generation of stucco and pseudo-art. Their day is past; yet many a sweet remembrance flits around their quaint portals for us who, though now in the sere and yellow leaf, once were young.

A pretty sight met my view as I entered the front drawing-room. The heavy dark maroon curtains which divided the front room from the back were only partially drawn aside, allowing but a glimpse between their graceful folds into the room beyond, which, as being the more comfortable of the two, was generally used by the family in preference to the other and larger one. I stood for a few seconds to watch the picturesque scene, without being observed, for I had come up

the stairs alone, having told the servant—who knew me and my ways of old—that I would announce myself. A bright wood-fire was burning in the grate, its flickering ruddy flames throwing a cheerful glow over the dark carvings of the antique and somewhat sombre furniture. A small card-table stood in front of the fire; and two handsome pink-shaded lamps on the mantel-piece cast a soft pleasant light on the three players who were seated round the table. Save for the fitful fire-gleams, the rest of the old-fashioned, low-ceilinged room was in that state of semi-darkness which is so refreshing to the tired eyes when no especial call is made upon their powers.

Margaret was sitting with her back to the fire, the seat opposite to her being vacant; while Colonel Sefton sat to her right, facing me. A tall wiry-looking man occupied the fourth place; but as his back was turned towards me, I could not see his face. The Colonel's handsome features were shewing strongly the ravages of Time, the relentless destroyer of all earthly beauty; and the hand that oft at his country's call had wielded a stalwart sword, now trembled with the weight of a few pieces of card-board. Margaret had chosen for her seat a curious old carved ebony arm-chair, its quaint high back serving as a screen from the heat of the fire, and forming a dark framework for her beautiful Raphaellesque face. She was dressed in a dark ruby-coloured velvet dress, fitting tightly to the soft outlines of her graceful figure; and around her neck and across her shoulders, a costly kerchief of soft cobwebby lace was knotted with careless grace. The wrists of the close-fitting sleeves were fringed with ruffles of the same beautiful material, and from out their soft folds a small shapely hand was gracefully dealing the cards. Her silky black hair was drawn back with an almost imperceptible wave, so as to shew the contour of her well-formed head, and was fastened in a small coil at the back with a plain gold comb. Framed against the grotesque and weird carvings of her ebony chair, against the darkness of which her lustrous dress and classic-cut features stood out in rich relief, she appeared like a living portrait by one of the old masters.

In the old days, when Walter's bright face and joyous laugh gladdened the place, Margaret had been wont to take the Colonel as her partner, leaving me to link my fortunes with those of the youth. To-night, the positions were changed. The stranger was joined with Colonel Sefton; and Margaret was sitting where I usually sat; the place opposite, which I supposed was intended for me, being vacant. They were evidently trying to while away the time until my arrival by playing that dreariest of all dreary games, dummy whist. I broke in upon them as Margaret was in the middle of her deal. She proceeded with her task without stopping, whilst I was greeted by the Colonel. He rose from his seat and shook my hand warmly, as if he were pleased to see me; and then with a little nervous hesitation in his manner, he said, with a forced smile, as he turned towards his partner, who had risen from his chair as I entered: 'Allow me to introduce to you'—

'The knave of spades!' abruptly interrupted Margaret, as with a flourish she turned up that gentleman at the end of her deal as the trump-card.

'Nonsense, Margaret,' testily exclaimed the Colonel, for the moment taken aback and disconcerted at the awkwardness of the words; whilst Mr Owen Mainwaring—for it was he, and whom I recognised as the Colonel's companion on the evening when Thomson the detective had appropriated my cab—grinned uneasily as I offered him my hand.

'I think we already know each other—at least by name—although we have not met before,' I said, bowing politely as I turned to Margaret. Helping myself to a cup of tea from a side-table, I drew my chair to the fire, so as to sit between Margaret and Mr Mainwaring. As they were nearly at the end of the rubber, I begged that they would finish it before I joined them, so as to give me time to rest myself and finish my cup of tea.

Margaret seemed in a very perverse and wayward mood. Her spirits were high and, at times, almost boisterous. A strange determined expression hovered round her mobile lips. From her behaviour, a stranger might have formed an unpleasant estimate of her character; but I, who had known her from her earliest childhood, and loved her—at first for the sake of that bright young mother, whose memory, since a hard fate had made shipwreck of our love, had been shrined in my heart as its most priceless jewel, and then for her own sake—for the little motherless girl soon won her way to my affections—knew the sterling worth of that firm, strong, but loving spirit. I sighed as I stirred my tea; for it had always been a fond hope of mine that, despite the Colonel's prejudice, I should one day see Walter and Margaret husband and wife; and now my hopes were overthrown by some parvenu mine-owner—'Knave of spades!' I muttered to myself as I repeated Margaret's ominous words.

Walter's amiable and pliant, although somewhat impetuous disposition required a little ballasting. There was undoubted good in him; but it required a steady and skilful hand to develop and utilise the latent powers—a task which I considered Margaret would be thoroughly competent to undertake. They seemed formed for each other. Their two characters would have fitted together like pieces in a puzzle. Apart, but two disjointed fragments; but together a perfect whole.

I watched, with some curiosity, the successor to poor Watty. He might have been thirty-eight or forty years of age, or even still older, for his face was one of those which stand the onslaughts of the enemy without shewing the scars received in the battle. His figure was tall and thin, and not otherwise than well made. The hands, however, were peculiarly long and narrow, and without being fat, were well covered with smooth flesh of extreme and almost unnatural whiteness. On the little finger of his left hand he wore a handsome antique cameo, which he displayed rather ostentatiously. His face was peculiar. At times it seemed quite handsome, and then some sudden change or unpleasant expression would cross it, destroying the illusion, and making it appear positively ill-looking. The features on the whole were well shaped, but each one had some counteracting influence which destroyed their effect. The nose was thin and rather long, and the outlines of the mouth well drawn; but their good points were marred by a restless habit that

he had of constantly biting his under-lip and expanding and twitching his nostrils. The eyelids, with their long thick fringe of almost white hair, drooped over the large pale greenish-gray eyes, and by their shadow made them appear of a much darker colour. The eyebrows were pale in colour, and bushy; but the long fringe of lank hair which surrounded his bald head and his small neatly trimmed whiskers were of a dull gravelly red. He was well dressed; but his clothes sat uneasily on him, and despite the excellence of their fit, shewed to considerably less advantage than the old Colonel's well-worn and tumbled-about suit; but Colonel Sefton was one of those whose birth and breeding were so effectually stamped on every look and movement, that the adjuncts of costly clothes were not required to proclaim the position of their wearer.

I could hardly recognise Margaret, she seemed so changed. There was a reckless, defiant, and almost flippant ring about her behaviour that was strangely at variance with her usual lady-like demeanour. She appeared to take a malicious pleasure in saying the most outrageous things. The Colonel was decidedly puzzled to know how to control her; and the unfortunate betrothed, against whom most of the pointed sarcasms which fell from her lips were hurled, seemed certainly the reverse of comfortable. I had a difficulty in restraining my smiles at some of her sallies, for they were aimed well, and by the way their recipient winced, must have struck home. Colonel Sefton once or twice tried to check her, but without effect; in fact his efforts seemed rather to stimulate her to attempt still higher flights.

Mr Mainwaring had but an imperfect knowledge of whist, and he was so put out with trying to parry Margaret's attacks, that he could not give proper attention to the game. 'Why don't you keep to your own place, Margaret?' pettishly growled the Colonel as his partner trumped his trick. 'You know I am used to your play, and don't like changing my partner.' Margaret had always been his *vis-à-vis* in all the old rubbers. It was a whim of his that it should be so, and Walter and I had always humoured him, waiving our right to cut for partners; but I now learned that Walter's old seat was always left vacant, and Mr Mainwaring, instead of Margaret, coupled with the Colonel.

'Don't grumble, dear!' she cried soothingly as she lovingly stroked his withered old hand; and then turning to me with a mischievous laugh, she cried: 'It is quite fair—is it not, Mr Woodroffe? I have my dummy, and papa has his.'

The game after this proceeded quietly. Mr Mainwaring dealt and turned up a heart as trumps. Margaret and her dummy partner were ahead of their opponents, and only wanted the odd trick to be up. I thought she shewed a little anxiety to win. A bright carmine tint lit up her cheeks as she scored each trick which led her the nearer to victory. At last Colonel Sefton, whose turn it was to play, led with the three of spades, and Margaret followed with the five. 'This trick will be mine, I think,' cried Mr Mainwaring, looking at Margaret with a conceited smile as he played the knave.

She made no reply, but quietly took up the top card of the two belonging to her dummy partner,

knowing as she did that these two cards must be trumps, and that he was reckoning on victory too hastily. 'The king of hearts trumps the knave of spades,' she said, as she played that gentleman. Her tone was quiet, but it was not utterly void of a ring of triumph. She rose from the table, and throwing down her last card, scored another trick with the queen of hearts.

'You've beaten us in point of numbers, Miss Sefton,' Mr Mainwaring cried, throwing himself back in his chair. 'But I think honours are divided.'

'I think you are mistaken,' she replied with careless contempt, as turning back to one of her dummy partner's cards, she displayed the ace.

'Right, Margaret, my girl!' cried the Colonel, laughing good-humouredly at his partner's discomfiture. 'Fairly won. You've snatched the honours from us. Hearts are sure to win!—Eh, Mainwaring?'

Mr Mainwaring did not seem pleased at his defeat or at the Colonel's joke. The colour went from his cheeks; and there was a sudden savage gleam in his pale eyes as he glanced at Margaret, which augured but ill for her domestic peace, if ever she gave him the right to call her wife.

As Margaret complained of being tired, the game was not continued. We sat for some time in awkward silence. A strange restraint seemed to have fallen over us, destroying our ease, and making us feel uncomfortable with each other.

I observed with regret that Mr Mainwaring had apparently obtained a great influence over the Colonel, who appealed to him in everything. With an uncharitable spirit, born of my loyalty to Walter, I set down his fulsome deference to the querulous old man as hypocrisy. Margaret's face was in the shade; but once or twice, when a fitful fire-gleam shot across it, I saw her fine lips give a scornful curl. Mr Mainwaring also observed it, and again that cold glitter came into his eyes, that made me tremble for her future.

Notwithstanding my desperate attempts at conversation, the evening proved dull. A cloud hovered over us which we were unable to disperse. It was so different from the merry old times, before the unhappy severance between father and son! Unable to fight against the miserable dullness, I made an excuse for leaving earlier than I usually did. Colonel Sefton rose to accompany me to the door. Margaret also rose from her seat. 'Then I shall go to bed, for I am very tired,' she said; and coldly giving Mr Mainwaring the tips of her fingers, prepared to leave the room.

'Nonsense, girl!' cried the Colonel reprovingly, as she kissed him. 'Won't you stay with Owen? It is still quite early.'

'If he particularly wishes it,' she replied carelessly, repressing a yawn, without taking the trouble to glance at him.

After such a show of indifference, he could scarcely ask her to stay; but her conduct stung him. Skilfully concealing his annoyance, he uttered a few polite words, and taking up the evening paper, sat himself by the fire as if to read it; although I think that his attention was rather given to what was taking place at the other side of the room, than to the paper he held in his hand.

I opened the door for Margaret. She placed her hand in mine in silence, and looked at me with bright glistening eyes; and then with sudden

impulse she put up her hands and drew my face to hers. 'For the sake of old times,' she whispered as she pressed her soft warm lips to my old withered cheeks, and flushed their shrivelled folds with the memory of the past. 'Ah, Margaret, lassie,' I murmured to myself, 'I am thinking that your heart is still sound;' for it seemed to me that the kiss was not for me, but for the brave laddie who held so warm a place in my affections.

Colonel Sefton asked me to go with him to the library; and there told me of his great anxiety to see Margaret married and settled comfortably; for he knew that his days were numbered, and that he should not be with her much longer. He had felt his health slowly breaking for some time past, and had had threats of paralysis, which his medical attendant had told him were not to be neglected. He had kept all this to himself, until he now told it to me. His great trouble was for Margaret to be married to Mr Mainwaring before he died, so as to satisfy the cravings of his morbid punctilious pride that he had not husbanded her fortune for his own son; for he still felt distrustful of them if left without his care. He spoke very warmly about the good kind husband that he had secured for his little girl, as he called her; and my heart smote me at his infatuation, for I felt certain that he was mistaken in his estimate of the man's character; and that the day which witnessed her marriage with Mr Owen Mainwaring would set the seal to a lifetime of cruel misery and unhappiness.

The oily fellow had, apparently by means of fulsome adulation and hypocritical deference, warped the old man's now somewhat enfeebled mind, over which he had obtained such power that my endeavours to turn him were almost waste of time. He accused me of prejudice, and stopped the argument abruptly by telling me that Margaret could trust to his judgment, and would do as he bid her. He seemed very restless and nervous, as if he had not said all that was agitating his mind, but lacked courage to give full utterance to his thoughts. I bade him good-night in the library; but he followed me to the front-door, and notwithstanding that the night-air was raw and cold, he stood on the steps for a few minutes talking upon indifferent subjects. As we opened the door, a miserable-looking female figure rose from the lowest step, on which she had been crouching, and gazed eagerly at us. The face was young, and once had been beautiful; but the cruel ravages of want and disease—and perchance vice—had preyed on the bright looks, and obliterated their loveliness. As I met her gaze, the eagerness disappeared from her face. With a look of disappointment, she shook her head despairingly, and muttering to herself, drew her thin, worn shawl round her poor wasted figure and walked slowly away, her hollow cough—her young life's death-knell—awakening the slumbering echoes of the almost deserted street.

The Colonel's supply of small-talk at length became exhausted, and I turned to leave him. Placing a detaining hand on my arm, he said: 'I am anxious that the marriage should take place as soon as possible; for then—then—the words faltered as the father's heart overcame his pride, and gave utterance to his wishes—'I might have Watty—my boy—home again!' The bright moon-

beams fell on his venerable head and feeble figure as he slowly re-entered the house. I stood at the corner of the street watching him until the door had closed, when I was startled by an arm being brusquely linked in mine. 'God bless him!' exclaimed an honest manly voice with earnest feeling in its tones.

'Ay—and you too Watty, my lad!' I cried, as I recognised my unexpected companion.

✓ ROCKS AND THE WEATHER.

'As hard as stone' is both a familiar and an applicable proverb. There is perhaps no substance to which we more readily apply for a comparison in point of durability and hardness than stone, or the rock-materials of which the crust of the globe is composed. But hard and durable as stone may be, the scientific study of building-materials has revealed certain very remarkable exceptions to the proverbial expression, and has shewn us that in some cases, stone is one of the most perishable of substances. Man's attention to this matter is chiefly attracted and directed by the decay of the materials he uses in the erection of buildings. A short experience shews the builder that all stones do not possess the same power or quality of withstanding the assaults which the 'weather'—including under that term a combination of influences—is continually making upon it. The soft sandstone which is readily and cheaply dressed, may prove a costly bargain in the end, when, in a comparatively short space of time it is found to be wasted, or 'weathered' by the elements.

From the experience of the effects thus made visible in our building-stones, the builder has come to exercise a wise selection of his materials, and to choose those rocks and quarries from which stones may be procured which will most successfully withstand the 'hand of time' with its destructive fingers, in the shape of frost, wind, rain, chemical action, and the like. It is thus obvious, that in the consideration of the effects of weather on rocks and stones there are two chief aspects in which the question may be regarded—namely, the composition of the stone, and the forces that effect its destruction.

Possibly no better illustration of the effects of an apparently trivial circumstance in preventing the wasting of rocks by the weather could be found than in the benefits which accrue to rocks from the presence of a thin layer of vegetable matter. A layer of moss covering a rock-surface will be found to prevent in the most effectual manner the wasting of the rock, by absorbing the rain which otherwise would beat directly on it, and by shielding the rock from the destructive action of frost. Chemical action, that *bête noire* of the builder, is thus also prevented, and the influences of the outer world are in a manner defied by the unostentatious growth of very humble forms of plant-life. Thus it may be shewn that the lowliest lichen which coats an old wall, and the mosses which delight the eye of the artist and satiate our sense of beauty as they coat rock and crag with verdure, serve an important purpose in the economy of nature, and preserve the mate-

rials of our globe from the action of destructive rock-wasting agencies. It is the absence of even this superficial layer of vegetation which tells so heavily against the preservation of rocks in the arctic regions of the world, and in the northern regions generally, where rock-waste proceeds to its fullest extent.

The consideration of the chemical composition of the stones used in building forms an important item in settling the durability of any particular rock-material. Of all stones used for building-purposes sandstone is by far the best known and most popular. It is a plentiful stone moreover, and one as a rule easily quarried; considerations which naturally result in its wide employment in building. But under the common name of 'sandstone' very varied substances are included. Thus some sandstones are perfectly worthless for building-purposes, owing to their soft friable nature. Others again, are so hard, that the cost of hewing them detracts from their value as building-stones. An example of a stone which decays very rapidly under the influence of the weather, and of the chemical surroundings which are especially prevalent in towns, is the well-known 'Bath stone,' which at first possesses a light colour, and looks exceedingly attractive, but which, in a comparatively short period of years, shews decided traces of being 'the worse for wear.' A notable stone on the side of durability, on the other hand, is the sandstone obtained from that most famous of quarries, Craighleith, near Edinburgh. The composition of this latter stone reveals the presence of a large quantity of flinty material, well calculated to resist the 'weathering' action of the elements.

Variations in chemical composition may thus be shewn to lie at the root of the decay or preservation of stone. Geologists inform us that the most porous stones are those most readily affected by the weather; and this for the reason that porosity implies the absorption of water. When moisture of any kind once enters a stone, the disintegration of the stone is simply a matter of time. Like an insidious and secret enemy, the water percolates through its substance, and if aided by frost, the destructive action becomes very apparent and greatly intensified. Every one knows that when water freezes a large amount of expansion takes place; and the result of a hard frost on porous stones is simply to convert the contained water into ice-crystals; the water in the act of freezing undergoing expansion, and chipping off numerous small fragments of the stone with slow but certain effect. Even the outside surfaces of stones may be seen to be markedly affected by frost in this way. Layer after layer will be peeled off, or converted into a fine powder, which may be dislodged from the surface by a touch of the finger.

Stones formed of lime in any of its numerous forms are perhaps the most liable to suffer at the hands of the weather. Rocks which are formed of chalk or carbonate of lime are singularly susceptible from their soft nature, of being affected by the action of rain and frost. But even the hardest limestones give way under the powerfully solvent action of the gas known as carbonic acid—a gas widely diffused in nature, which is given off from the breathing organs of all animals, and which in its turn forms one

of the chief items in the food of plants. This gas has an especial affinity for lime. When it attacks limestone rocks and unites with them—wasting their substance in the act—it forms carbonate of lime or chalk, and thus renders the rock-materials soft, and readily broken down by other agencies. The destructive work that chemical action begins, is in fact continued and finished by frost, rain, and the like. Such a destructive action as that just mentioned, takes place with especial rapidity in towns, where it is materially assisted by other substances which the rain washes down from the atmosphere, and of which ammonia and sulphurous acid are good examples. And hence limestones naturally became tabooed as building-stones; and, taught by experience, builders wisely reject the softer and readily-worked varieties even where a strong temptation to use them may exist.

The oxygen-gas of the atmosphere is an agent which also exercises a strong and potent sway over the fate of stones and rock-materials, by attacking various substances contained in rocks, and thus softening them and rendering them more readily attacked by other destructive forces. Nor must the effects of mere changes in temperature be lost sight of in their influence upon stones. The labours of the stone-mason in making tight and exactly fitting joints in masonry are sometimes greatly impeded by variations in temperature. It has been shewn that in America the variations in the expansion and contraction of stones—the annual range of temperature being over 90° F.—are of very marked kind, and result, not merely in stones but in rocks themselves, in the splitting of the stone into layers. Livingstone observed that the sudden cooling of rocks in Africa at night from a day-temperature of 137° F., resulted in fragments being split off, varying in weight from a few ounces to two hundred pounds.

The effects of the destructive action of the weather on stones is nowhere better seen than in cemeteries and graveyards, where monuments are completely exposed to the action of the elements, and where the rapidity of the action may be often accurately calculated from the dates on the monuments. The marble records which are so much in vogue will be found to last a comparatively short period of time; the lime entering into their composition being, as already remarked, singularly liable to the attack of gases. Even the hard sandstones, most durable of all monuments, may be seen in old churchyards to have their inscriptions completely obliterated after the lapse of a century or so; and it would thus seem that even the record of frail mortality borne by the enduring stone itself is doomed to perish and fade in the grasp of the all-destructive hand of Time.

An action which is peculiarly destructive to any exposed stone-surface on which it has leave to exert its force, is that of loose sand driven by high winds. Few persons save those who have practically investigated the subject, have any adequate idea of the destructive power of wind-blown sand. The innumerable sharp particles of flint and other minerals blown with great force against even the hardest rock, will speedily make their power apparent in the roughened and scratched surface which the rock will exhibit. 'Sand-scratches' are amongst the valued evidences of the geologist in shewing him the

prevailing direction of winds at past periods of the earth's history, and in affording information regarding the former exposure of a rock-surface which may now occupy a position removed from all external influences and destructive actions. And no better illustration of what wind and sand may together accomplish in the work of destroying substances even more brittle than stone may be mentioned, than the well-established fact, that at Cape Cod the prevailing and long-continued gales have, by driving sand against the windows of houses, actually succeeded in drilling innumerable fine holes in the glass.

The present subject would hardly be regarded as having been treated even in a cursory manner, without a reference to the celebrated case of stone-decay presented by the Houses of Parliament. These buildings of world-wide fame were built of magnesian limestone or dolomite, a rock, usually regarded by mineralogists as having been formed by the gradual 'metamorphism' or slow change of common limestone, the carbonate of lime being replaced by carbonate of magnesia. The decay of this stone—part of which was obtained from a quarry other than the originally selected source of the stone, the supply from the original quarry having failed—attracted much attention in London and elsewhere; and a Commission was appointed some years ago to investigate into the causes of the destructive action, with the view of proposing a remedy therefor. It was pointed out, however, that a magnesian limestone might withstand the air and influences of London perfectly well, the building illustrating this fact being the Geological Museum in Jermyn Street, London; and hence one opinion at least laid the blame of the destructive action on the selection of a bad limestone, and not on the unsuitability of magnesian limestones generally for building-purposes.

The prevention of the process of decay and destruction of the Houses of Parliament soon became a subject which attracted the attention of experimenters. According to Professor Ansted, all paints containing oil, or other matters derived from animals or plants, are perfectly useless agents in the preservation of stone. Experimentation therefore proceeded in the direction of the discovery of some fluids which from their chemical nature would serve as efficient preservatives of stone. A preservative fluid of this nature was the 'water-glass' of Dr Fuchs—the silicate of potash—first produced in 1825, which was proposed as a compound capable, when mixed with pigments, of insuring the indestructibility of paintings. Mr F. Ransome of Ipswich, many years ago experimenting on the production of artificial stone, succeeded in manufacturing such a product, and was thereafter led to devise a solution which would protect stone from the corroding action of the atmosphere. This compound he obtained in the 'silicate of lime,' and as mentioned in a notice of Mr Ransome's process which appeared in this *Journal* for April 1876, the solution was painted on part of the river-front Houses of Parliament in 1856, with complete success. Since that period, as far as we can learn, no solution has superseded the silicate of lime, although compounds innumerable, of very varied composition, have been proposed. Mr Ransome has also succeeded in producing an artificial stone

of extreme hardness and durability, by processes allied to those through which his preservative solution was obtained.

The subject, however, is by no means exhausted, and it may be said to present one of the highest triumphs of art, when, aided by scientific knowledge, it converts useless into useful material, and successfully combats the forces of Nature which mould and destroy the world around us at will.

THE OUBLIETTE.

A STORY IN THREE PARTS.

PART I.

September 1479.—The sun had set two hours ago, and the gates of Plessis les Tours had been closed for the night. But a sudden and imperative summons in the King's name caused the drawbridge to be again lowered, and the portcullis raised to admit a military guard of the Royal Archers. That fact alone would have been sufficient to attest the high rank of the prisoner who rode in their midst, even without the accompanying signs of rich dress and noble appearance. The Captain in command handed to the governor of the fortress a warrant, of which the following is a translation :

BY ORDER OF THE KING.

THE LOUVRE, PARIS, September 7, 1479.

M. Lamarque, Governor of Plessis les Tours, will be responsible for the safe keeping of Claude d'Estrelles, otherwise Marquis of Clair-marais, until the further pleasure of the King be known. Surveillance without rigour. (*Signed*) LOUIS.

The Captain of Archers received from M. Lamarque a receipt averring that his duty was faithfully performed, took a courteous farewell of his prisoner, and then departed as rapidly as he came. Claude d'Estrelles stood for a moment listening silently to the rattle of the drawbridge chains, and the sharp ring of the horses' hoofs passing over and dying away in the distance; then, with a scarcely perceptible sigh, he followed the governor in the direction indicated.

One glance at his charge had been enough. M. Lamarque dismissed the warders, and spoke pleasantly to the young Marquis, whose mood certainly did not shew much reciprocity in the way of conversation. They crossed the courtyard, ascended some steps, and stopping before a door, heavily ironed it is true, M. Lamarque threw it open, and ushered his prisoner into a room—not a dungeon. A warder arrived with lights and wine; other refreshment was proffered, and curtly refused; then with a kindly 'Good-night,' the governor departed.

Claude heard the key turn in the massive lock, and clenched his hands fiercely as he strode up and down his ample chamber, digging at every turn his heel sharply into the floor, as though he thereby crushed some noxious reptile to death. When absolute weariness took possession of him, he sank upon his couch, and sat there motionless, staring at the ground, his fair hair ruffled, his

brows contracted, and in his deep blue eyes a look—a concentrated look of intense wrath and hate. It would have gone ill with his enemy, whoever he might be, had they met at that moment face to face. And as thought deepened, the Marquis's hand went swiftly to his side to encounter only an empty dagger-sheath. It was not the custom to leave dangerous steel playthings at the service of Louis XI.'s captives. Claude had for the moment forgotten that fact, and grinding his teeth with an angry 'Bah!' he threw himself back, and finally slept—slept well too, as men often do in their worst extremity.

The sunshine of a bright autumn morning awoke him, and with a certain philosophy which already made things look less gloomy than they had done some hours before, he inspected his new abode, and took to himself a certain consolation thereby; for it was not so bad as it might have been. Not luxurious by any means; but still nothing resembling those cells of Plessis les Tours, concerning which tales so grim and dreadful were extant. There was a certain amount of furniture. His sleeping-pallet was tolerably comfortable; there were air and sunshine and space. The window, strongly barred certainly, was low and broad, and the lattice of it opened inwards, admitting the fresh wind, the sounds of humanity, and the songs of the free birds. Free!

The Marquis d'Estrelles leaned against the casement and gazed over the fair fields of Touraine to where the rushing Loire sparkled in the sunshine. He thought of his stately home upon the banks of that same river; of the broad lands that called him lord; of the dead father and mother who had transmitted to him such a noble heritage with their unstained name; of the fair sister, to whom he gave, as yet, the only love of his heart—that sister of whom he was so proud, his only near tie on earth; then, with darkening brow, of that day, that black day when Louis, out on a hunting expedition with his infamous favourites, had halted at the Château d'Estrelles, and Tristan's evil eyes had first fallen on the Lady Rénée. And because he would not give that fair and noble sister in marriage to one who has been justly termed the executioner of Paris—he had refused with horror and mad words the insult—this was come upon him—this! And Rénée in her lonely home!

Claude shook the iron bars in impotent fury. Then with calming influence upon his troubled spirit came the reflection: 'He cannot take her by force. Rénée will know how to guard herself. She is my father's daughter. And for me—ah well! All is not ended, yet.' The gay French spirit was reasserting itself.

Soon came the governor and breakfast. And M. Lamarque informed his prisoner that within certain limits he was free to walk about as he pleased. 'I am rejoiced, M. le Marquis, to find that my instructions permit me to treat you with lenity and grant you many privileges. And when you know that any infringements by you of the boundaries laid down will cause most unpleasant results, you will, I am sure, spare both yourself and me annoyance, by being submissive and patient. Mine'—here the worthy governor's voice altered—'mine is not an easy—not a delightful task. Do not make it harder for me, by getting yourself into a worse plight.'

It will be seen that M. Lamarque was a kindly man; and though a soldier and a faithful guardian of the fortress intrusted to him, still he was made of softer stuff than quite befitted a servant of the merciless Louis, and the ruling power of such a place as Plessis les Tours. One needs to be of marble when one has to do the work of a M. Lamarque.

Plessis les Tours! Who that reads the history of those times shudders not at that well-known name? A prison-palace, in whose dark corners horrors untold existed. Above, splendid chambers, where Louis, withered, lean, and pale, with an executioner and barber for his constant companions, was wont to feast royally, and to pray hypocritically; where courtiers, fearing their dreaded master, bowed down to him with a reverence that hid their hate! While below—too far for their groans and cries to reach the upper air and intrude unpleasantly upon the hearing of those who made merry above them—lay chained and dying men, cut off for ever from light and liberty—below, yawned the noisome dungeon, the torture-chamber, the oubliette. It is computed that during the reign of this diabolical Valois, fifteen hundred people perished by the oubliette alone. The Bastille was rent stone from stone by an indignant people; but Plessis les Tours yet looks upon the rushing Loire, that river which bore so often the freight of a floating shapeless sack, inscribed with the legend, 'Laissez passer la justice du Roi.'

Months went on, and as yet no worse luck than detention had happened to our Marquis, who spent a good deal of his time in the governor's apartments, cultivating the acquaintance of Madame, a motherly Normande, and Léonie, her fair and stately daughter. That was the one bright thing in the château of Plessis—the presence of Léonie Lamarque. How often, winning the consent of her father by the pleading ways he found it so hard to resist, she carried comfort into the dark and miserable cells where languished the hapless prisoners! How often they passed away blessing the fair face that shone upon them in their hour of need! A lovely and loving woman, would not every soldier in the garrison have done impossible things to win a smile from her? Notably, poor Gustave Chapellier, commandant of them all, young, brave, and handsome, who worshipped her with a love exceeding great; and laid his honest heart at her feet with the satisfaction—if indeed it were any—of knowing that slowly but surely, day by day, Léonie was giving hers away to the noble and accomplished captive; that the devotion of years was accounted as nothing to the acquaintance of weeks with the courtly, perhaps frivolous Marquis—that Léonie would not hear his sighs nor notice his desperate unhappiness, while finding her heaven in the deep blue eyes for which the Estrelles were famed. Nor could anything be done; remonstrance would be idle; Léonie was free to choose, whether she chose wisely or not. Again, poor Gustave! add to this that neither father nor mother had the least idea of how matters stood with their daughter and the Marquis. Truly, Gustave's predilection was, as it ever is with a Frenchman, patent enough to any beholder who cared to notice it. And it may be that the elders of this household were content to let him win their Léonie if he could, while caring not to

lose too soon the idol of their hearts. As to the Marquis, he was in everything charming; but his rank was too far above them for inquietude; any day the capricious king might restore him to liberty and favour, when they would see him no more.

Winter came and went. It was Louis's custom to give no warning of his visits to Plessis, thinking, probably, that it enabled him more easily to discover any lapses of duty on the part of his governor or subordinates. Nothing delighted him more than to seize an offender in the act, and for that, it was of course necessary to pounce unexpectedly upon the delinquents. M. Lamarque, quite well aware of this trait in his amiable master's character, circumvented it by posting trusty watchmen in the vicinity, who by a given signal warned the inmates of Plessis les Tours when the king's stealthy approach was detected. That signal came one April morning when d'Estrelles and Léonie were on the ramparts. Acting upon the governor's friendly hint, the Marquis betook himself to his own apartment; and not long afterwards Louis, attended as usual by his favourites Tristran and Olivier le Daim, entered smilingly the gates where his coming brought always death and misery. As he descended from his litter, a shrunken shambling figure, wearing the black velvet hat adorned with its coarse leaden images, how many shivered as they caught his furtive glance and the sinister expression of his pallid lips. He was in a gracious mood that day—a mood that always boded ill to some unlucky wight, and was therefore more to be feared than even his spasmodic wrath. For some hours he amused himself by inspecting the fortress, visiting some of the dungeons, and witnessing the torture of one man, whose life mercifully departed during the process; then, having one way or another settled the fate of half-a-dozen human beings, the king went to dinner with great complacency. When that was over, the Marquis of Clair-marais was summoned to his presence.

Spite of his bravery and gay philosophy, Claude's heart gave one fierce throb as the hangings were lifted and, followed by two guards, he stood within the royal presence. More, a gleam of hatred lit his eyes as they fell upon Tristran, who, richly dressed, stood by the window ostentatiously gazing out into the courtyard below. Belonging to the dregs of the people, low, hideous, and brutal, yet raised by the caprice of a king to riches and honours, the name of Tristran blots the page of history. It is impossible to comprehend what attraction so degraded a being could have for one who came at least of a royal race—the race of magnificent Francis, and learned gracious Margaret, and courtly Henry. The fact alone remains. It is at least a trivial consolation to know that nothing marks the spot of earth which at last received his remains; the king's once powerful favourite has shared the fate of many nobler men, a dishonoured grave.

With a look and a wave of his hand, Louis dismissed the guards.

'We are happy to see you again, Monsieur le Marquis; and we trust that the time given you here for reflection has been profitably spent, and the result is that you are now willing to accede to our wishes, expressed to you some months ago.'

'I regret, Sire, that your hopes are vain. My views upon so detestable a subject have not altered, nor are they likely to do so.'

'So!' The king leaned back in his chair, biting his nails, and stealthily eyeing his rebellious subject. 'That is much to be regretted—the more especially as, unfortunately, your determination is likely to produce very unpleasant results, if persisted in. Our people know how much our royal heart inclineth always to the side of mercy; and nothing grieves us more than when insolent obstinacy compels us to punish, when we would so much rather reward.'

'You are far too lenient always, Sire!' murmured the hypocrite at the window.

Claude had stood with firmly closed lips and upright mien during the king's speech. At Tristran's words a look of deadlier resolution, mingled with contempt, came over his face.

Louis noted it, and turning to the executioner, said mockingly: 'I fear, worthy Tristran, that our foolish young friend does not appreciate yet the honour that you would confer upon the family of Estrelles. He ventures to scorn you, faith of a king! and thinks doubtless it were fitter we should find you a bride among your people in the Quartier Notre-Dame!'

Tristran paled with smothered wrath. Like other favourites of tyrannical masters, he often had himself to bear in silence the sting of Louis's glib tongue, which pierced alike his friends and foes.

After a moment's silence the latter turned again to Claude. 'We had hoped, Monsieur le Marquis, to take you back with us, restored to your home and position in society, also to what is, of course, a trivial thing, our royal favour. We ask you once again—and think seriously before you reply: Are you prepared to tender us your entire submission, and give us the consent which we could well do without' (Claude shivered), 'but which it suits us to demand of you as a loyal subject? Speak! It is your last chance for some time to come.'

'Be wise, Monsieur le Marquis,' said Tristran, turning to him; 'and do not reject the kindness of so gracious a lord. Let me implore you, for your own sake.'

Utterly ignoring both the speaker and his words, Claude drew a long breath, and answered Louis in a steady voice: 'The king is my master—but he has had my answer. There can be no other.'

'It is your final decision? Think of the cost once more!' And Louis's eyes glittered ominously.

'Sire, I have spoken.'

Grasping the arms of his chair, Louis rose quickly, and his pale lips quivered as he exclaimed viciously: 'Enough! Be it so. We can see easily how misplaced has been our kindly consideration for you—how foolish we have been to make your residence here so pleasant to you, and stoop to ask when we could more fitly command. There are means of taming those who are mad enough to defy us. Let us see how you will relish the bread and water of affliction!' He struck fiercely a bell upon the table, and the guards re-entered with the governor of Plessis. 'You have already received your instructions, M. Lamarque. The Marquis of Clair-marais sternly refuses our clemency. We bid him farewell for a season of repentance. And'—taking off his hat, he placed it upon the table, then sank down

upon his knees before it—'we will pray Our Lady and the holy Saints that the punishment which he has brought upon himself may be blessed to him!'

BIRDS AND FRUITS.

A GREAT deal has been written of late years on the relations between insects and flowers, and many careful observers have shewn good reasons for believing that the exquisite colours of our roses and our tulips depend ultimately upon the slow selection of bees and butterflies. But very little attention in comparison has been given to the equally curious subject of the relations between birds and fruits; and yet fruits are objects of far greater practical importance to mankind than the beautiful blossoms whose origin Mr Darwin and his followers have so often explained to us. Nay, more, though the ordinary uses of apples and pears blind us in great part to their beauty, it cannot be denied that flowers themselves are scarcely more lovely than the glowing oranges, the crimson cherries, the soft-bloomed peaches, and the purple plums, which owe their bright colouring to the appreciative eyes of woodland or tropical birds. It may be well worth while to glance for a moment at the manner in which these pretty and sweet-flavoured seed-vessels have been produced.

It may here be stated that a fruit, in spite of all its other uses to men or animals, is really only a seed-vessel. We now know that no part of any plant or animal has been created solely for the use of other species: every organ, however necessary for the life of external kinds, has a duty of its own to perform in the economy of its possessor. A few years ago naturalists might have asserted that honey was put into the nectary of flowers simply for the sake of the bee who gathers it, and that a soft pulp was placed around the stone of the blackberry simply for the benefit of the bird which swallows it. Some people would even have gone so far as to assert that the honey and the blackberry, the bee and the bird, were all alike created solely for the ultimate enjoyment of lordly man. But nowadays no wise thinker would venture to maintain such an opinion, in the face of recent discoveries and observations. It is now quite certain that every portion of every living thing has a definite function to perform for the benefit of its own species. If the luscious clover is gifted with honey to attract the bee, with sweet scent to draw it on in its quest, with purple petals to allure its eye from afar, it is primarily because the clover needs the aid of the bee in fertilising its perfumed heads. If the currant coats its berry with the self-same sweet juices, and relies upon the self-same attractions of rosy colouring, it is primarily because the currant-bush needs the aid of the bird in dispersing its seeds through the surrounding fields. The bee, the bird, and man alike make use of the advantages they find ready prepared for

them in the world around; but in every case each species performs its own work for its own sake. The plant stores honey for the plant's behoof; the bee lays up in hives for its winter support; and man uses it for his own pleasure. But the object of the bee is no more the supply of honey to human tables than the object of the farmer in sowing wheat is the supply of soft nutriment for the weevil.

Fruits, in the sense which we ordinarily give to the term, are seed-vessels which specially rely for the dispersion of their seeds upon the voluntary aid of animals. A botanist, indeed, would call a poppy-head or a pod of peas a fruit; for in botanical language the seed-bearing apparatus of a single blossom always bears that name. But ordinary unscientific people mean by the term a sweetish, bright-coloured, succulent, and pulpy mass, though of all these characteristics, sweetness and bright colour are least essential, since many recognised fruits are sour or acrid, and a few are dull and sombre in hue. Nevertheless, the popular idea is a fairly good and accurate one, answering to a real difference of habit in the plants to which it refers. Just as the bright blossoms, which alone are known as flowers to unscientific eyes, really answer roughly to those which depend for fertilisation upon insects, so the succulent fruits, which alone are known as such in every-day language, really answer roughly to those which depend for the dispersion of their seeds upon voluntary aid from birds or other animals.

Voluntary aid, we must say, because some seeds, like burrs and other hooked kinds, get themselves dispersed by means of sheep and cattle, to whose coats they cling, against their will. Indeed, there is no end to the devices which Nature adopts to insure that seeds should be carried to fitting spots for their germination. Some, like thistle-down and cotton, are provided with fluffy tails, which carry them through the air on the wings of the wind; others, like the maple, have regular wings of their own, on which they fly in the same manner as a kite. The balsam bursts open its capsule with a sort of explosion, and scatters its seeds around it in every direction: the grasses simply drop their little round grains upon the bare soil beneath. But there are two kinds of seed-vessel specially liable to be eaten by birds and other animals, and these two kinds differ diametrically in the way they comport themselves towards their devourers. They are commonly called nuts and fruits.

The nut is a hard-coated seed, whose kernel or germ—with its accompanying stock of nutriment—the squirrel or monkey eats whenever he can get it. This, of course, kills the young plant, and so defeats the whole purpose of the seed. Accordingly, nuts are purposely made in such a manner as to escape the notice and baffle the hungry attempts of their enemies. They are generally green as they grow among their native foliage, and brown as they lie on the bare ground beneath. Thus they never attract attention by their colour or brilliancy. Then, again, they are covered by a hard shell, often so hard that even man finds it no easy task

to break through the outer coat and get at the nutritious kernel within, as we all know in the case of cocoa-nuts, Brazil-nuts, and the American hickory. And furthermore, they very frequently have a nauseous bitter husk, like that of the walnut, or are covered with little prickly hairs, as in the filbert; all of which devices combine to prevent animals from discovering, cracking, and eating them. As though all this were not enough, they not uncommonly contain bitter juices, and sometimes finish by poisoning the aggressors. Clearly, nuts are a kind of seeds which do not lay themselves out for being quietly eaten up. They defend themselves to the very last "by every possible device in their power.

A fruit, on the other hand, adopts exactly opposite tactics. To use the language of ordinary life, it *wants* to be eaten; or in other words, it is so devised by Nature as to offer every inducement to various animals to eat it. The means which it employs for the allurement of birds are exactly like those which flowers employ for the allurement of insects. It has sweet juices, perfumed essences, red, blue, or purple colouring. From a distance, the scarlet hips and haws or the orange rowan-berries, strike the eye of the bird; the bright hues seem to act as an advertisement of the food. The pulpy covering is evidently intended for the bird's use, and the sweet taste for its pleasure. Clearly, the fruit is a kind of seed-vessel which means to be eaten if it can only get any one good enough to perform the duty.

But what good can the plant derive from having its fruits devoured? If the nut is so anxious to escape detection and to avoid animals, why should the fruit take so much trouble to excite attention and to commit a voluntary suicide? Simply because the bird is of as much use to the plant as the plant is to the bird. It is, in short, a case of mutual accommodation. Just as the bee, in sucking honey, carries the fertilising pollen from flower to flower, so the bird, in devouring fruit, disperses the seeds which pass undigested through its body. Though the pulp is always soft and sweet enough, the actual seed is at heart a nut. In the plum-stone and peach-stone we see this truth clearly enough, for there the resemblance has gone to such a length that even the most careless observer could not overlook it. In the cherry and the orange it is less immediately obvious, but still quite recognisable when we look at the question closely. In the strawberry and raspberry, however, the separate seeds are so much smaller that we scarcely notice their presence, and therefore we quite forget their essential identity with the nut. It is thus evident that a fruit is really a seed-vessel which has turned its outer coat into a soft pulp, while its inner part still contains one or more hard nut-like seeds.

Of course this description must only be accepted in the most general sense, for fruits belong to an immense variety of types. Some of them are simple like the plum, which may be looked upon as analogous to the simple flower of the dog-rose; while others are compound like the fig, which may be considered in the same light as the compound flower-head of the daisy. Some, again, indulge in still wilder vagaries, like the strawberry, which is in reality not a fruit at all, but a collection of fruitlets, standing upon the outer surface of a raised red receptacle; and the whole

colony may therefore be compared to the white arum or *Æthiopian lily*, which is not one flower at all, but a little family of flowers collected upon a raised yellow spike or spadix, and surrounded by a beautiful sheath, which acts as the attractive portion for the insect guests. But whatever may be the particular form of the fruit, its object is always at bottom the same, to insure the dispersion of its seeds by the aid of the birds, whose assistance it invites with its pulpy covering.

The simplest form of fruit, as in the plum or cherry, consists of one seed, containing a central kernel or embryo, and surrounded by a hard shell and a soft outer coat. These we generally know by the name of stone-fruits, because their single seed is usually big enough to attract our attention very forcibly. Other moderately simple fruits, like the currant or the grape, have several little seeds inside a single pulpy lining. The raspberry has a separate pulp for each tiny nut; while in the pomegranate the whole mass of scarlet-coated seeds is inclosed in an external rind which secures them from attention till the moment they are ripe. The berries of the spindle-tree are some of the prettiest and most instructive of all, for they are shut up within a hard but brilliant orange-coloured shell, which bursts asunder when they are ripe, and displays the beautiful soft little fruits within. Not less lovely are the seed-vessels of the common yellow flag or iris, which similarly fly open in the autumn, and allow the bright golden seeds in regular rows to peep through the green seams of the inclosing capsule.

But we must observe at the same time, that fruits are not at all stages of their growth prettily coloured, soft, and sweet. They begin as hard, sour, green knobs, and only acquire their external allurements as they slowly ripen. Of course this is quite necessary if the plant is to carry its point and get its seeds dispersed in a fit condition for sprouting; for its whole object would be defeated if birds were to eat the seeds while they were still young and green. Hence the colour is only added at the moment when the little embryos within have become fitted for an independent existence. So, too, the sweet juices replace the sour acid of the green fruit, and the hard pulp grows soft and yielding. This is just like the change which comes over all insect-fertilised flowers in the bud; and the stages in that case may be most easily seen in the tulip or the garden hydrangea, where there is no green cup or calyx to hide the coloured portions as they slowly acquire their brilliant hues.

In a thousand ways, then, we see that succulent fruits have been specially adapted to the senses of birds. Only those fruits which rely upon the fowls of the air for dispersion are sweet and pretty, and even they only at the exact moment when dispersion will benefit them. So that here again we find one of those minute relations of dependence between animal and vegetable life of which so many instances have been forthcoming of late years. The more we look into the balanced economy of life, the more does it appear, as Sprengel long ago pointed out, that 'the wise author of Nature has not created even a hair in vain.' And whether we regard the mode of creation as direct or as indirect, by a pure exercise of volition bringing forth an orderly universe through one design, or by slow adaptation of every part to

every other through natural selection, it is equally true that every portion of every plant and every animal is instinct with meaning for those who patiently try to read it aright.

NICE DISTINCTIONS.

THERE are plenty of casuists who are at all times ready to satisfy the inclination without wounding the conscience. The distinctions which they draw are so ingeniously fine as, at times, to be all but imperceptible.

For instance, an old Highlander, reproached by his pastor for absenting himself from church one Sabbath morning, denied the charge, repeating the denial so emphatically that the puzzled minister asked him if he would offer his oath that he was there that morning. 'To be sure,' was the unabashed one's answer; and the minister said no more. A friend of the false-speaking Highlander told him it was awful to hear him offer his oath to such a lie. 'Hoot, toot, man,' quoth Donald. 'Isn't there a great difference between offering a thing and giving it?'

It is oftentimes convenient to be able to discern such differences. When a party of Paisley weavers, anxious to cross the Clyde from Greenock to Dunoon one Sunday morning, desired the captain of a Rothesay steamer to take their boat in tow, as they did not care to profane the day by using their oars, the captain wanted to know where was the difference between employing their oars and employing the steamer's paddles. 'The difference!' exclaimed the spokesman of the conscientious crew. 'There's a great difference between rowing by the power o' man, who must answer for what he does, an' a wheel-turning engine; a steam-engine's not a moral being, an' is therefore not an accountable agent.' A specious argument certainly; but one much more easy to answer than that advanced by a farm-servant, willing enough to milk her master's cows on the Sabbath, but firm in refusing to feed them on that day. Drawing a nice metaphysical distinction between what are and are not works of necessity, the shrewd lass said: 'The cows canna milk themselves, so to milk them is a clear work of necessity; but let them out to the fields, and they'll feed themselves.'

When Captain Robinson was surveying the west coast of Scotland, the Grand-Duke Constantine came on board his ship for a few days. Anxious to shew his royal guest as much as lay in his power, Captain Robinson steamed over to Iona one Sunday, to give the Russian prince an opportunity of examining the antiquities there. The custodian of the ancient church flatly refused to open its doors. 'Do you know whom I have brought with me?' inquired the disgusted officer. 'He's the Emperor of a' the Russias, I ken by the flag,' responded the keeper. 'But had it been the Queen hersel', I wadna gie up the keys on the Lord's Day.' The Iona keeper, however, was yet not invulnerable, for Captain Robinson asking him if he had any objection to drinking a glass of whisky with him upon the Sabbath, he replied: 'That's a different thing entirely!'—The Count — seems also to have been aware whisky-imbibing did not come under the taboo. When the waiter at a Dumbarton hotel informed him he could not be supplied with hot water on the

Lord's day 'for sic a thing as shaving,' the Count did not press the demand, but remarked that he would take some toddy, if the waiter would bring him the materials. Here was a reasonable proposal, and one that at once commended itself to the conscientious waiter, who drank the whisky, but left the hot water to the Count. The distinction was a fine one.

Dr Wardlaw, finding the six-mile walk between his house and his church in Glasgow too much for old legs to compass comfortably, enlisted the services every Sunday of a sturdy pony. One day a meeting was held to protest against railway companies running trains upon Sunday, and the Doctor declaimed eloquently against the threatened desecration. When he had done, somebody in the crowd urged a request that he would repeat the Fourth Commandment. The unsuspecting Doctor did so; and then the same voice inquired if the law did not apply as much to the pony as to the ox and the ass. The inference was too palpable to be ignored, and the next two Sundays the Doctor walked to church; but the third saw him astride his pony again. He explained that, having consulted the early Fathers of the Church and the divines of Geneva, he had come to the conclusion that the institution of the Lord's Day, as observed by all Christian churches and sects, applied to mankind only; and that, in appointing the first day of the week to be the Sabbath of the Christians, instead of the seventh, which was the Sabbath of the Jews, the intention was to leave the Sabbath of the brute creation as it originally stood—therefore he had again taken to the pony, which of course he never worked on Saturdays. The worthy Doctor's faith in his own argument is paralleled by that displayed by the Missourian Baptist minister who while always impressing upon his family and flock that it was needless for them to take care of their lives, since the moment of their death was fixed before the foundation of the world, nevertheless took especial pains in putting his rifle in order when bound on a frontier mission. His wife one day ventured to suggest that his practice scarcely accorded with his preaching. 'Your view, my dear,' replied he, 'is a very proper view; but see here—suppose I should meet an Indian and his time had come, and I hadn't my rifle with me, what could he do? My dear, we must all contribute our part toward the fulfilment of the decrees of Providence.'

When the Custom-house officials at Basle demanded the payment of duty on the first consignment there of some Eau de Lourdes, the importers resisted the demand on the ground that the liquid was not a medicament, but merely water, to which the mystical power of faith alone gave medical properties. The authorities, however, insisted that the intrinsic worth of the water did not in any way concern them; it was sent to Switzerland to be used as a medicine, and was therefore liable to duty as other medicines.—The theory that things conducive to the same end necessarily come in the same category, found no acceptance among the good people of Draperstown. Under the influence of Father Mathew's eloquence, these worthy Irish folks renounced their favourite potation; but one day, alas! somebody introduced a bottle of ether into the place, telling them that a mere thimbleful would raise the

spirits, and that they might indulge in the new drink without violating the pledge; and ether has ever since been in vogue there as a cheap and efficient substitute for the tabooed 'cratur.' The once popular 'Father' had only scotched the snake. Like the down-east minister who felt proud of having converted a notorious Sabbath-breaker, until, happening to ask an old farmer if he did not find a great difference in his neighbour since he had joined the church, the latter replied: 'O yes. Before, he used to carry his axe on his shoulder when he went fence-mending on Sunday; now he carries it under his coat.'

When John Dalton was a lad, Elihu Robinson invited him to join a young man named Alderson in studying at his house of an evening. A dispute arising between the two students as to the working out of a difficult problem, Alderson clinched his argument by offering to bet Dalton sixpence he was right. Objecting to betting, Mr Robinson vetoed the proposition; but suggested that whichever proved to be in the wrong, should find candles for both during the winter season; although where the difference lay, save that the stake involved was larger, we fail to see. An ability to comprehend such nice distinctions is very comforting to conscientious people. A Michigan divine discovering that his son had been testing his pocket-money in a lottery ticket, wrote to the seller: 'I do not approve of lotteries regarding them as no better than gambling. My son bought number five in your drawing. If it drew anything, don't send the money to him. Send it to me.' He held himself above the law as would lay down for others; like the good man who favoured an American preacher with a letter of six pages rebuking him for not having attained a state of sinless perfection; while by folding the epistle in a newspaper wrapper, he contrived to defraud government of a couple of cents.

One of Brougham's earliest appearances as an advocate was in behalf of a man accused of stealing a pair of boots. The evidence as to the theft was conclusive; but Brougham contended that his client must be acquitted, the articles stolen being half-boots, which he argued were not boots any more than a half-guinea was a guinea, or half a loaf a whole one. Lord Eskgrove knowing his man, guessed that he was being played upon, so without asking the prosecuting counsel to reply, he at once over-ruled the objection, saying: 'I am of opinion that "boot" is a *nomen generale*, comprehending a half-boot. The distinction is between a half-boot and half a boot. The moon is always the moon, although sometimes she is a half-moon.'—A more serious contention was raised in the Court of Chancery not many years since. A testator left property the disposition of which was affected by the death of 'either' of two persons. One learned counsel strenuously insisted that the word 'either' meant both, and quoted Chaucer, Dryden, Southey, Richardson, Webster, and the Scriptures in support of his view. The court held that though the word might sometimes be used in that sense, its proper meaning was one of two, as in Macheath's well-known affirmation:

How happy could I be with either,
Were t' other dear charmer away.

Common-sense, however, does not always regulate legal decisions. A Neapolitan tax-collector, proved

to have appropriated the public moneys to his own private use, was acquitted on the ground that being one of the public, he was part-owner of the money, and could not steal what was his own. —The son of a wealthy German out-running his allowance, obtained a loan from a banker. On his way home, a thief lightened him of his pocket-book containing the borrowed notes. When the banker demanded repayment, the debtor laughed at him; and he was compelled to take legal proceedings before the Imperial Tribunal of Commerce, to have the pleasure of hearing that court decide he had no grounds for the action; no loan contracted by a minor being recoverable unless he derived actual benefit from the money; which, thanks to the thief's intervention, the borrower in this case had not done. —On the same principle did a London magistrate deal with a journeyman baker who had spent twelve pounds of his master's money in buying religious tracts, which he gave away while going his rounds. He was dismissed with the caution that it was a mistake to take money dishonestly even for a religious purpose.

Distinctions of an exceptionally fine nature are occasionally made. An English lady holiday-keeping in a fishing village in Normandy, struck one day by the downcast appearance of a pretty damsel, asked her why she was so sad. It was the old story: her sweetheart found no favour with papa. Knowing the young fellow to be good-looking, honest, and industrious, the lady inquired what was the objection. 'Ah, madame,' said the weeping girl, 'my father is proud, and his family is not in our station; they are people who only have cotton sheets.' —The distinction of class, founded upon the possession or non-possession of linen sheets, reminds us of Nicaragua, where, Mr Boyle tells us, there are only two classes—those who wear boots, and those who do not. So thoroughly is this distinction recognised, that no one claiming to be booted will ever make a public appearance barefooted, even though his boots be mere upper leathers strapped over the instep. On the other hand a barefoot will not don a pair of boots unless he sees a probability of emerging permanently from the lower classes. The prices of admission to public entertainments are regulated accordingly—so much for boots, half-price for barefoot; and no one ever dreams of saving half the cost of his pleasure by removing his boots before entering.

Parvenus are proverbially blessed with conveniently short memories. A wealthy glass-blower settled down at a midland watering-place, the 'society' of which is largely composed of retired business-men. After much debate, the new-comer was pronounced eligible, and elected a member of the Club affected by the bigwigs of the place. A few months later, one of the partners of a noted sauce-making firm purchased some property in the neighbourhood, and sought admission into the Club. He was duly proposed and seconded; but found himself excluded by one black ball; and it did not take him long to discover he owed that to the glass-blower. He forthwith waited on that worthy, and asked for an explanation. 'I think it rather hard lines,' said he, 'that you, of all people, should black-ball me.' 'My good sir,' replied the glass-blower, 'I was very sorry to do it, but I felt it was my duty. In a place like this, you see it

is necessary to draw the line somewhere, and I felt it ought to be drawn at sauce.' The visitor rose, saying: 'Thank you. I am obliged for the explanation. But allow me to point out, that whilst you are so wonderfully quick to remember who made the sauce, you seem quite to forget who made the bottles!'

THE HOSPITAL MONTE DELLA MISERICORDIA.

WE are indebted for the following very interesting particulars to a correspondent residing in Naples:

Some two hundred and seventy years ago, a number of Neapolitan gentlemen agreed to have a picnic at Posilipo, then, as it is now, one of the most beautiful and charming of the environs of Naples. Each of the party agreed to bring a cooked dish for the dinner, and everything was duly prepared for the feast. The day appointed turned out to be a downpour of rain, and thus the original object was frustrated. A happy suggestion was however made—that the viands should be distributed to a selected number of poor; and such was the gratitude evinced by the recipients, that it occurred to those who had originated the idea of utilising the unused dishes of the abandoned feast, that a yearly offering on the same day should be made in similar manner, to commemorate the event. This was carried out with great regularity and success, so much so, that it led to the formation of the Society del Monte della Misericordia; which was afterwards sanctioned and duly incorporated by the state. The main objects of the Society were to visit the sick, to relieve prisoners, to shew hospitality to strangers, to help the poor, and bury the dead. The Society pursuing this career of usefulness, conceived another idea, which was duly carried out, and stands to this present day a practical and prominent proof of the good which it has done. I allude to the Hospital de la Misericordia, in the town of Casamicciola, in the island of Ischia, which I had recently the pleasure of visiting, and which, for the object it carries out and the manner in which it is worked and managed, deserves especial notice and commendation.

Ischia, long famous for its thermal springs, and within twenty miles from Naples, was wisely selected by the 'Misericordia' as a place where the poorer classes might receive the benefit from the use of the waters; and accordingly, a large Hospital was erected by the Society. The one actually now in use, a very spacious building, was built in 1778. Within its walls are seventy-seven marble baths, all in one long *salle*, and in direct connection with the hot springs of Gurgitello, the water of which is about one hundred and forty-four degrees Fahrenheit. These baths, all open, are ranged at each side of the central passage of the *salle*, somewhat like stalls in a stable. The Hospital is entered from the road by a flight of steps leading to a vestibule; and then there is a large quadrangular court, at the four sides of which are the several sleeping-wards and other rooms for the accommodation of the patients. On turning to the right after entering the court, there is a spacious door, leading to a gentle paved incline, down which patients are carried daily, in specially planned chairs, to the bath-

room. At the time I visited the Hospital, at about 9.30 A.M., all the patients, with very few exceptions, were in the bathing *salle*—the greater number of them in the baths. The *salle* is thoroughly well ventilated. I particularly noticed the tenderness and care shewn to the sufferers by the attendants, who had in many cases not only to help them into the baths, but to undress and dress them. I saw all sorts of chronic rheumatism, swollen and stiff joints; some of the patients were afflicted with paralysis, others with diseases of the bone, some with old gun-shot wounds. The good which these baths were doing was strongly marked in the expression of the faces. After remaining some time in the bathing *salle*, I visited, before going up the incline, the rooms devoted to the use of the medical attendants, who are supplied with every modern medical scientific assistance.

The bathing season only lasts from July until September; and the management at Naples first send women patients, who are treated exclusively, occupying the Hospital for about forty days; and then they leave, and are replaced by the same number of men. The patients are sent over free of all expense from Naples to Casamicciola, and back again in a special steamer. The trustees, and the trustees alone, give admission to this valuable institution, from which no foreigner is excluded so long as personal application is made in Naples, and who, after medical examination, is certified to be a proper subject for relief. I was accompanied in my visit to the Hospital by a medical gentleman, a native of Ischia, who has long practised in the island, and who introduced me to the resident doctor. He was good enough to shew me over the establishment.

The sleeping-wards are spacious and well ventilated. The beds are large, and kept scrupulously clean. At the head of each bed is a card, detailing the nature of the case treated; and it can be well understood what valuable medical statistics can be learned and compiled by studying the cases. Several wards in the upper part of the building are devoted to children; and here one has an opportunity of witnessing the ravages which scrofula makes on the poor little sufferers. It is impossible to speak too highly of the care shewn to the children by the attendants, and particularly by the Sisters of Charity who are attached to the Hospital. At the left side of the court of the quadrangle there is a general *salle* in which the patients dine; and adjoining the *salle* is a spacious kitchen. On the opposite side of the court is the chapel. The food which was being prepared was excellent; and this, combined with the general salubrity of the Ischian air and the careful administration of the baths, goes a long way in effecting cures. Over four hundred are annually sent to the Hospital from Naples.

At the other side of the road, opposite to the entrance of the Hospital, are the *étuves* or vapour-baths, which are used largely. There in a round room in which are sixteen niches, sit the patients, who enjoy the vapour, which is let in direct from the spring. There are also means for applying cold-water douches; and the mud from the springs, impregnated as it is with the main compounds of the water itself—namely, salt, soda, carbonic acid, and sulphur—is applied with much success in cases of chronic rheumatism, sciatica, and gout.

Gurgitello is the name of the spring which supplies the Hospital; but there are several other springs in the neighbourhood which have repute, such as Cappone, &c. These waters are taken internally, and being strongly alkaline and antacid, are eminently useful in cases of stomach complaints.

There are two public establishments of baths at Casamicciola, both well managed. Here may be seen daily during the season the numerous strangers who visit the island for the baths. Attached to some of the hotels (notably the *Bellevue*) are also to be found mineral baths. There is a fairly well organised steam-service between Naples and Casamicciola—two boats each way every morning and evening, the trip lasting three hours; stopping to embark and disembark passengers at the town of Ischia, and also at Procida, the adjoining island.

The sail along the coast from Cape Misena, passing Baja, Pozzuoli, and Posilipo to Naples, is replete with interest. To the east, Vesuvius always prominent; and to the south the towering Monte St Angelo, with the towns of Castellamare di Stabia, Vico, Meta, Sorrento, and the isle of Capri. The excursions inland and coastwise at Ischia are all charming. One of the most attractive is that from Casamicciola to Barano on the south side. The drive up the valley by an excellent recently constructed road puts one in mind of English woodland scenery. The lava stream of 1302 is crossed; and the volcanic crags mixed with luxuriant vegetation add much to the beauty of the scene. Then again there is the drive from Casamicciola to the town of Ischia, passing by the royal park and casinos, and the picturesquely situated modern harbour, formerly the Lake of Ischia, which was once an old crater. About a mile from the harbour is the town of Ischia itself, with its famed old castle on an isolated rock, so often made the subject of a picture by artists of repute.

IRISH LULLABY.

The following pretty lullaby is culled from a volume of Irish verse entitled *Songs of Killarney*, by Alfred Perceval Graves, published by Isbister & Co., Ludgate Hill, London.

I'll rock my own sweet childie to rest in a cradle of gold on a bough of the willow,

To the sho-heen sho of the wind of the west and the sho hoo lo of the soft sea billow.

Sleep, baby dear,

Sleep without fear,

Mother is here beside your pillow.

I'd put my own sweet childie to sleep in a silver boat on the beautiful river,

Where a sho-heen whisper the white cascades, and a sho hoo lo the green flags shiver.

Sleep, baby dear,

Sleep without fear,

Mother is here with you for ever.

Sho hoo lo! to the rise and fall of mother's bosom 'tis sleep has bound you,

And O, my child, what cozier nest for rosier rest could love have found you?

Sleep, baby dear,

Sleep without fear,

Mother's two arms are clasped around you.

PARSIMONIOUS PEOPLE.

It is the duty of every one to be thrifty; but it should be kept in mind there is a difference between thrift and mean parsimony. Some people who are at ease in their circumstances make themselves ridiculous by shabby attempts at saving. We once knew an old Scotch lady who, though she had a considerable sum of money left her, was parsimonious to an extraordinary extent. As she grew old she grew more miserly, until she would not allow herself milk for her tea or meat for dinner. Bent double with rheumatism in her old age, she would not pay any one to wash or clean her house, but with infinite labour accomplished these tasks for herself. She never would send for a doctor, for she pithily remarked: 'They cost a power o' siller, and did no good.' On bitter winter days we often found her shivering over a single handful of fire; a small piece of hard cheese and a cup of tea with mouldy bread, her only dinner. When she died she left about eight hundred pounds, besides various moneys in silver, copper, and bank-notes, which she had stuffed into drawers and various secret recesses. All her money went to a couple of nephews, who never paid her the least respect, and who even grudged the necessary outlay for her funeral!

An old clergyman of very mean habits got married when far advanced in life, to the great surprise of all his acquaintances, who wondered at such an act of extravagance. Upon inquiry, however, it was found that he had married entirely from motives of economy. The lady of his choice was the widow of a respectable schoolmaster, who after her husband's decease was in the habit of lending him the clothes of the defunct; so, thinking that marriage would put him in possession of the remainder of the said garments, he proposed, and was accepted! His stipend was, with glebe and other things, about two hundred pounds per annum, yet by dint of sheer niggardliness he died leaving many thousands. He made a point of picking up and taking home anything he could find—a piece of coal fallen from a passing cart,

an old lucifer-match box, pieces of stick from a neighbouring wood—anything to save outlay in his own house. He never wrote on a new sheet of paper, always using blank pages of other people's letters, and turned all envelopes outside in, so as to make them available for his own use. After his death, a drawer full of turned envelopes, gummed together in a very ingenious way, was found. On one occasion he gave a dinner, which consisted of a sheep's head minus the trotters, which were to be kept for next day's dinner.

A very wealthy gentleman of respectable family became heir to still more money from the death of a brother, also a rich man. The increase of wealth made him more wretchedly mean than formerly. He entered upon his new possessions by wearing his brother's clothes; and as his brother had been a rather meagre personage, while he himself was stout, people soon observed the sparseness of his garments. He sometimes gave presents, but only from interested motives. He dined out as often as possible, that he might save buying food; and turned his back upon all benevolent schemes. Yet, strange to say, when he died he bequeathed considerable sums to certain hospitals and charities. This was probably from motives of vanity, as he had never been known in the remembrance of any one to do a really benevolent action.

There was a Thomas Pett who died in Clifford's Passage, London, in 1803. He was a native of Warwickshire. He came to London at the age of ten with one shilling in his pocket. As he had no friends or relations in the city, he was indebted to the kindness of an old woman who sold pies, for a morsel of bread, till he could procure himself employment. Some time after, he was engaged as errand-boy by a tallow-chandler. Mrs Dip—the chandler's wife—being 'a lady of London mould,' could not endure his rustic manners and awkward gait; so she sent him off one bitter winter's night with the remark: 'Your master hired you in *my* absence, and I'll turn you off in *his*.' The good husband did not desert Tom however; he found him out, and sent him

as apprentice to a butcher in Southwark. For the first five years he had twenty-five pounds a year and meat and drink. The accumulation of money and the abridgment of expense were the two sole objects of his thoughts. His expenses were reduced to three heads—lodging, clothing, and washing. For the first he fixed on a back-room in the second-floor, with one window, that occasionally admitted a stray sunbeam. Of his dress every article was second-hand. Nor was he choice in the colour or quality; sagely observing, when he was teased about his garb, that according to Solomon there was nothing new under the sun; and that as to colour, it was a mere matter of fancy. Concerning washing, he said that no man deserved a clean shirt who could not wash it himself; and that the only fault he had to find with Lord North was the duty he imposed upon soap. There was one expense however, that always weighed heavily on his mind, and often robbed him of a night's rest, and that was shaving. He often lamented that he had never learned to shave himself. He used to console himself under this affliction by hoping that one day beards would become fashionable. He made a promise to himself that as soon as he had amassed a thousand pounds he would treat himself to a pint of porter every Saturday. Fortune soon put it in his power to perform this promise, and he continued to treat himself till the additional duty was laid on porter; he then reduced his portion to half a pint once a week. If he heard of an auction anywhere near, he ran quickly and begged a catalogue, as if anxious to buy, and after he had collected a number of these he sold them for waste-paper. When he heard an accidental rumour that the bank in which his money was had failed, he shook from head to foot and took to his bed, refusing to eat until he was assured that all was right. He was never known, even in the depth of the coldest winter, to light a fire in his room, or go to bed by candle-light. He loved good cheer—at the cost of another. 'Every man,' said he, 'should eat when he can; an empty sack cannot stand.' Once on a time he was prompted by the demon of extravagance to purchase a whole pint of small-beer; but after buying it, was so overcome by remorse that he locked it in his closet; then threw the key out of the window, that he might not be tempted to make too free with it.

Thus lived Thomas Pett, whose pulse for the last twenty years of his life rose and fell with the funds; who for forty-two years lived in Clare Market as journeyman butcher; who lodged for thirty years in one gloomy apartment, which was never brightened up with coal or candle light or the face of a visitor; who never treated man, woman, or child to a glass of any kind of liquor; who almost never ate a morsel at his own expense; who never said a civil thing to a woman; who would not trust a laundress with a pocket-handkerchief; who considered all must be mad or foolish that did not pile up gold; and who tried to bargain for his coffin half an hour before he died. He left two thousand four hundred and seventy-five pounds to distant relations, not one of whom he had ever seen or written to. The following list of his wearing-apparel, taken by a wag in the neighbourhood, runs thus; 'An old bald wig. A hat as soft as a pancake. Two

shirts that might pass for fishing-nets. A pair of stockings darned with every colour. A pair of old sandals. A bedstead. A toothless comb. A very old almanac. One old chair and wretched table. A small looking-glass. And a leathern bag with one guinea in it.'

A miser of even more penurious habits than Mr Pett was Mr Daniel Dancer, who was born in 1716, and was the eldest of four children. His father lived on Harrow Weald Common, near Harrow-on-the-Hill, where he possessed property to a very considerable amount, which his son Daniel, by a most determined and whimsical abstemiousness, increased to upwards of three thousand per annum. The childhood of Daniel Dancer passed without anything remarkable. It was only when he attained his majority that he began to display a 'saving knowledge' perfectly incredible. He had a sister whose disposition agreed perfectly with his own, and as they lived together many years, their stories are necessarily connected, and would furnish the most melancholy and degrading instance of the infirmity and folly of human nature.

Mr Dancer's wardrobe might justly boast more colours, textures, and substances than the garments of a company of strolling players, and yet notwithstanding all his curious patching, his garments often failed to cover his skin, though he strove to keep all together by a strong hay-band round his waist. Linen was a luxury to which, in spite of his avarice, he was not wholly a stranger; for at an early period of his life he used to buy two shirts every year; but for some time before his death he never allowed himself more than one. After this shirt got into his possession, it was doomed to hang upon his back till it fell off in rags, never being either washed or mended. After his sister's death, a pair of sheets as black as soot-bags were discovered upon the beds; but these Mr Dancer would never suffer to be removed; and when they were at length worn out, they were never replaced; so that after that time he relinquished the use of linen to sleep in. He never would allow any one to make his bed; and at the time of his death, it was observed to be filled with sticks which he had stolen from different hedges. His room was not swept for many years.

Mr Dancer's ingenuity in concealing his money was most wonderful: his bank-notes were usually deposited with the spiders; they were laid among the cobwebs in the cowhouse; and his guineas were placed in holes in the chimney and about the fireplace. The house, or rather the heap of ruins in which Mr Dancer lived, and which after his death Captain Holmes succeeded to, was a miserable decayed building, dreadful in its external appearance, for it had not been repaired for more than half a century. But though poor in outward appearance, the ruinous fabric was rich in the interior. It took many weeks to explore its contents. One of his richest escritoirs was found to be a dunghheap in the cowhouse, from which a sum little short of two thousand five hundred pounds was disinterred; and in an old jacket, carefully tied and strongly nailed down to the manger were found, in bank-notes and gold, five hundred pounds more. Several large bowls filled with guineas, half-guineas, and quantities of silver, were discovered at different times in searching the corners of the house, and various parcels of bank-

notes stuffed into old cushions and chairs. In the stable, Captain Holmes found some jugs of silver money. The chimney was not left unsearched, and well repaid the trouble; for in nineteen different holes, all filled with soot, were found various sums of money, amounting to more than two hundred pounds. And to finish up with, six hundred pounds in bank-notes were found in an old teapot. Thus living wretchedly, and dying with not one vestige of comfort, Daniel Dancer and his miserly sister furnish to all future generations an illustration of the extreme of penuriousness.

An extraordinary character lived some twenty years ago in a small Scotch town on the Firth of Forth. His name was Joe Taylor. He occupied a miserable hovel, and wandered abroad over the country buying rags, old bones, &c., bundles of which were carried by a poor starved ass, the sole living creature belonging to him. The only food he allowed this wretched quadruped was the grass that grew at the side of the roads in their many wanderings, or a bundle of forage abstracted from some farm-place. Taylor's food consisted of whatever he could beg, borrow, or steal—a few turnips lifted from the fields, some mussels or other shell-fish laboriously gathered on the shore, broken victuals from houses of the rich, old cabbage-stalks, anything in short that would stop the cravings of a naturally healthy appetite. Living near the shore, Joe made a point of watching for wreckage of any sort, and it was a happy day for him when any floating cargo made its appearance on the beach. One day great excitement prevailed among the fisher-people. The surface of the waves was covered to a considerable distance by quantities of apples, probably part of some wreck. The inhabitants plunged into the sea, securing as many as they could, but were outdone by Joe, who with greedy eagerness managed to clutch a peck or two, which he sold next day in the town. After his death, which was hastened by a violent cold caught in an unusually long ramble, his hut was searched; and in various holes and corners money to a considerable amount was found—not less than eighty pounds in all. In a corner of the hovel, under a stone of the uneven and broken floor, were found no fewer than three dozen silver spoons, of all sorts and sizes, discoloured with damp and marked with various initials. It was thought that Joe in the course of his many years' depredations must have carried off a stray spoon every now and then, and so accumulated these, of which he never made any use, and which he was probably afraid to sell. It was quite possible that in Joe's visits to the kitchens of the neighbourhood he might have helped himself to what he saw lying about, while the cook brought her dish of broken scraps from some back-kitchen or cupboard. Hence the mystery of the spoons.

The instances of people in large towns living miserably and dying of starvation, while all the time hoards of money are hidden away in bundles of rags, under boards, &c., are frequently to be met with, and furnish sad proofs that the 'greed for money is greater than the love of life.' Examples of this kind are every little while recorded in the newspapers; and we sadly contemplate the fate of those who wilfully perish in the midst of plenty. A wise frugality is widely different from an unnatural meanness, and we do

not know anything more melancholy or degraded than the sight of old age grasping eagerly every coin in order to save, while all the while the poor attenuated body is sinking for want of needful food, clothing, and comfort.

MARGARET SEFTON'S SETTLEMENT.

CHAPTER III.

As the wedding-day approached, Colonel Sefton's anxiety increased rather than diminished. The sharp cold of winter seemed to be sapping his life. He was, palpably, growing weaker day by day, and it was in vain that Margaret begged that the wedding should be postponed, so that she might nurse him. He was inexorable in his resolution to see her provided with a husband before his death should expose her to a renewal of Walter's suit. Margaret, at last, gave way to his wishes, and preparations were made for the marriage, she stipulating that there should be no honeymoon, as she would not leave him to the care of others; and to this both the Colonel and Mr Mainwaring had to agree. Owing to the failing health of the master of the house, it was decided that the event should be as quiet as possible; the only strangers who were to be present, besides myself the best-man, being two old spinster ladies at whose school Margaret had received her education, and for whom she had a great affection. The settlement was accordingly prepared for the signatures of the trustees and of the betrothed couple, and everything was in readiness for the eventful occasion.

It was a bitterly cold day at the end of November, and, late in the afternoon, I drew my chair before the fire for a good warm, before leaving for my solitary bachelor home. Lulled by the dreamy warmth, I lost myself in a reverie, in which the past was mingled with the future. 'Poor boy!' I said to myself as I thought of Walter, whom I had not seen since the night that he had met me outside his father's house. Memories of the blank in my own life stirred my heart with compassion. Was he so indifferent as he had represented himself to be? For the time, I had been deceived; but now a mournful conviction came that it was but bravado, and that he felt Margaret's desertion more poignantly than we had guessed. My fears ran in a new channel as I thought of what he had told me about his own wedding. In a moment of anger and disappointment, he might be led to throw himself away upon some worthless object, and by an ill-considered act mar the happiness of his whole after-life. Filled with these dreary reflections, I put on my overcoat, and was just about to call my head-clerk to give him directions about the morrow—when I should be absent from the office, as it was the day fixed for the wedding—when the door was pushed open and a warmly clad female figure entered the room. 'Hullo, Margaret!' I cried in a surprised tone, for it was she. 'Whatever brings you here at such a time? The Colonel is not worse, I hope?' I asked anxiously, for I began to fear that perhaps he had had another seizure of the dread disease that had laid siege to his existence.

'O no,' she replied, sitting down and unfastening her warm fur-cloak. 'I think he is a little better to-night; but he is rather anxious about the settlement, so I have called to ask you for it. Is

it ready?' There was a little nervous hesitation about her voice as she looked at me with a slightly anxious look.

It had been arranged that I should take the deed to Harlowe Crescent with me on the morning of the wedding; but knowing Colonel Sefton's morbid anxiety about the matter, I did not feel surprised that he should want to have the deed in his own possession. My co-trustee had already signed the deed, as a family bereavement had taken him abroad for a few weeks, so that he would not be able to be present at the wedding.

'Yes; here it is,' I replied, as I drew the deed from the tin box in which it was kept, and handed it to her. Her hands trembled as she took it from me and placed it on her lap, while she slowly removed her gloves.

'What a lot of writing, and how nicely it is written!' she cried, as she untied the pink tape which was fastened round it and slowly unfolded the unwieldy parchment. 'I am so nervous about to-morrow, Mr Woodroffe,' she said, after one or two attempts to read the contents of the deed. 'I want you to tell me all that I shall have to do. Must I sign my name where Mr Jamieson has signed his?'

'No,' I replied, as I pointed out the two seals intended for her and Mr Mainwaring, and shewed her where they would have to sign their names. 'You can sign it now, if you like,' I said, thinking that perhaps it might relieve her anxiety about the morrow.

She accepted my offer with avidity, and I accordingly called in one of the clerks as a witness. As soon as she had signed her name, I, as the remaining one of the two trustees, signed mine.

'There!' I cried, while the old clerk was attesting our signatures; 'there is only one more now to sign, and that is Mr Mainwaring; and as you now know all the formalities to be observed in executing a deed, you might get him to sign it to-night; so that there will be nothing to do to it to-morrow. I will mark the place with a lead pencil where he is to write his name, and any of the servants who can write will do as a witness.' I pencilled his name carefully on the deed—'Owen' one side of the seal, and 'Mainwaring' the other.

Margaret watched me closely. 'How strange it all is!' she remarked as I laid down the pencil and refolded the stiff parchment. 'I suppose you have to be very careful in preparing these deeds?' she continued musingly. And then, as if struck with a sudden thought: 'What do you do if there should happen to be a mistake in the writing?' she asked. 'Does it spoil the deed?'

Old men like talking and explaining, and more especially when the auditor is a pleasant, intelligent young lady; so I at once entered into a learned explanation of deeds and documents of like importance. She listened to me very patiently for some time; but at last finding that her particular question had not been replied to, she abruptly checked my learned dissertation.

'Yes, yes!' she said somewhat sharply; 'but I asked you what you did when there was a mistake in the writing that it was *absolutely* necessary to alter.'

'Well,' I replied, 'if the alteration is an important part of the deed, we make those who have to

sign the deed, and the witnesses, write their initials by the side of the alteration, to shew that it was done before, or at the same time that the deed was executed.' To illustrate my explanation, I shewed her a deed where a name had been written wrongly, and had been altered in the way I had described to her.

She seemed satisfied with my explanation, and placing the settlement in a small bag that she had brought with her, she rose from her seat, and stood silently putting on her gloves. Her cheeks flushed once or twice, and the lips half parted as if she were about to speak. I was in hopes that she was about to confide in me; but my expectations were disappointed, although I fancied that she suppressed a sigh as she took my hand at parting, and asked me to be at Harlowe Crescent on the morrow as early as possible, as she was afraid of the effects of the excitement of the day upon the Colonel, if left too much to himself.

CHAPTER IV.

The wedding morn rose cloudy and overcast with a biting easterly wind, that chilled one through and through with cruel blighting force; but about nine o'clock the wind veered round to the south, and the heavy gray snow-laden clouds rolled their threatening darkness from the sky's bright face, and unveiled the sun's generous warmth, thawing the stony hardness of the frost-bound earth. A troublesome client who had followed me to my private residence detained me for some little time, so that I was about half an hour later than I had promised to be when I drove up to the house in Harlowe Crescent.

As soon as I entered, I saw by the scared look of the old butler who opened the door to me that something was the matter. 'Oh, Mr Woodroffe! Such a dreadful thing!' And he shook his head and groaned dismally as he assisted me in taking off my overcoat.

'What is the matter, William?' I asked in an alarmed tone. 'Is your master ill?'

'No, sir,' he signed in reply. 'Worse—worse! My poor dear young mistress!'

'What about her? Tell me, man, quick!' I cried, as, impatient with his slowness, I grasped his arm roughly.

'Gone, sir, gone!' And tears stood in the faithful fellow's eyes, for he had known and loved his mistress from her earliest childhood, when first she had helped to fill the dull old house with brightness.

With difficulty, I managed to extract from him the information that on the arrival of the old ladies who had been Margaret's governesses, they had gone to seek her in her room, but, to their astonishment, had found it deserted. The house had been searched all over for the missing bride-elect, but without a trace of her being found.

I hurried past the old man, and opened the dining-room door. The table was laid for the breakfast, that now in all probability would not be needed; but no one was there; so I rapidly made my way to the drawing-room, where I found the whole household assembled in a terrible state of confusion. The two old ladies and the Colonel, dressed in their wedding finery, were cross-questioning Margaret's maid about her mistress; but the girl either knew nothing, or if she did, would

not say anything to throw a light on the mystery. From her calm self-possession and the deliberate answers that she made, I felt convinced that she knew more of the matter than she was telling us.

It was hard to find out what had really happened, for as soon as I appeared upon the scene, every one commenced talking at once in a state of the greatest excitement. The poor old Colonel alone was silent. He seemed dazed, and too much overcome by his grief to be of any use. He moaned feebly when I spoke to him, and wrung his hands with a piteous helpless movement as he listened to the confused stories and wild conjectures the others were pouring into my tortured ears. One thing, however, was very plain, and that was, that Margaret was not to be found in the house. Upon inquiry, I found that she had not been seen since just after her early breakfast, when she went for her usual morning visit to Colonel Sefton's room, as he never got up till after that meal.

Kneeling beside the bed, she had taken his shaking hand in hers, and raising it gently, had placed it on her head. 'Bless me, dearest father,' she had said in a strangely moved voice. 'You have been father and mother to me, and I dare not do what I have to do to-day without your sanction and blessing.'

'Why—sanction, my girl! you know you have it,' he had replied; but she, with earnest persistency, had made him repeat the word as, with uplifted hand and holy reverence, he blessed his beloved adopted daughter, and solemnly committed her to the all-protecting care of the one great Universal Father. Greatly agitated, she had risen from her knees, and throwing her arms round the old man's neck, had passionately kissed him, and, in tearful silence, left the room.

According to the maid's statement, her mistress had told her that she preferred dressing herself, and would ring for her when she needed her assistance to put the final touches to her toilet.

Miss Percival and her sister had arrived about half-past ten, and notwithstanding that Margaret's maid threw every obstacle in their way, had, with the tenacious fussiness of age, forced their way up-stairs, claiming as a right the privilege of entering the chamber of the motherless bride, who owed so much to their careful training. The girl sulkily threw open the door for them; but it was too late—the cage was there, but the bird had flown.

By my advice, a messenger was at once despatched to the church, to break the news to the expectant bridegroom of his bride's disappearance, and to seek his assistance in solving the mystery. Uneasy as I felt at Margaret's flight, yet I could not suppress a feeling of exultation at the thought of his disappointment. I was in hopes that she had repented at the eleventh hour, and in a moment of despair, had fled from the house, and taken refuge with some friend, from whom doubtless we should soon hear as to her safety; nevertheless, I could not help feeling rather piqued that I was not the friend to whom she had flown. The church where the ceremony was to have taken place was not very far from Harlowe Crescent, yet the few minutes that William was gone seemed almost a lifetime to our excited and impatient minds. He quickly returned, but with such a

scared look of consternation on his benevolent face, that we, at once, felt sure that he was the bearer of ill news. In short gasps, for he was out of breath with running, he told us that he had been to the church; but no bridegroom was there; nor had he been seen that morning by the astonished clergyman and sexton, who had been waiting for the bridal party since eleven o'clock. Mr Mainwaring's apartments were within a few minutes' walk of the church, and William had gone there before returning to us, in the hope of finding some clue to the fast-deepening mystery; but without success, for, in answer to his inquiries, he was told that Mr Mainwaring had left the house at eleven o'clock dressed in his wedding clothes, and with a flower in his button-hole. He had driven off in a cab with two strangers, who had called a few minutes before, and had been asked by the landlady into her lodger's sitting-room, where they waited until he came to them from his dressing-room. The three had got into the cab together, and seemed very friendly. She had not heard any directions given to the driver as to the place to which he was to drive them, but had supposed, as a matter of course, that the church was their destination. With the loquacity of her class she had volunteered the information that the bridegroom had looked very pale; but—to quote her words as reported by William—in her opinion that was nothing. It did credit to his feelings, poor dear man; for it was only proper that a man should be a bit overcome and nervous on his wedding-day.

Instead of clearing, the mystery was thickening. What did it mean? The clergyman was waiting; the church was ready, and so were the guests; but the bride had flown, and the bridegroom disappeared. It was like trying to play *Hamlet* with the characters of the mad Dane and his ill-fated sweetheart omitted!

But now another element was about to be added to our surprise. The fat cook bustled into the room bursting with information. From the torrent of words with which she deluged us, we made out that the butcher's young man, with whom she 'kept company,' had just called on his morning round, and in the course of conversation had told her that about ten o'clock that morning he had seen Miss Sefton, dressed in a long ulster cloak and a hat with a thick veil, walking hurriedly along Langton Street, and that at the corner she had been met by a tall young gentleman with a brown curly beard, who had placed her arm in his, and walked away with her in an opposite direction to Harlowe Crescent. He knew that it was Miss Sefton whom he had seen, for as she passed his master's shop, she had raised her veil to read a letter which she was holding in her hand, and he thus had had a good view of her face.

I felt now that it was getting serious. I began to be more alarmed. My fears deepened, for this last account looked strangely like an elopement; and it was with difficulty that I could control myself sufficiently to soothe the apprehensions of the crushed and heart-broken old man, thus doubly bereaved of his children. Hurrying down-stairs, I hastily summoned a cab, and drove at once to the house of a sharp and trustworthy detective to whom I was well known. Fortunately I found him in. I rapidly put him in possession of all the facts of the case, and anxiously awaited his opinion. 'Well, sir,' he replied thoughtfully, after I had

finished my tale, 'this certainly is a queer affair. I don't know anything about the young lady; but wherever she is, she will be better off than as the wife of Mr Owen Mainwaring, as you call him. He's safe enough, for we nabbed him this morning a few minutes before eleven, just as he was going to start for the church.'

'Nabbed him!' I cried, astonished and incredulous. 'Nabbed Mr Mainwaring? Surely you mistake.'

'Not at all,' he replied dryly. 'We are not often caught tripping. For some weeks past we have been on the look-out for Mr Owen Mainwaring, alias Brooke, alias Dundas, alias 'Foxy Bill,' and alias a dozen other names, who has long been wanted for forgery, coining, and a few other genteel employments. We had our suspicions of this gentleman, and have been watching him for the last month; but we did not know that he was the one we wanted until last night, when the mother of some wretched girl he had ill-used, hearing that he was about to be married to an heiress, revenged her child's spoilt life and early grave by betraying him to us; and we nabbed him just in time to stop him from doing any more mischief.'

The detective's story at once recalled to my remembrance the afternoon when Colonel Sefton had first told me of Margaret's engagement and approaching marriage; and how he and Mr Mainwaring had been followed by Thomson in the cab that had been intended for me. I was rather surprised at the time, but had set it down to some mistake, as detectives are not infallible. I had therefore said nothing about it, and until now it had escaped my memory. I also remembered the hollow-eyed, delicate girl I had seen crouched on the step of the Colonel's house on the night of my introduction to the scoundrel who had so craftily ingratiated himself with poor Walter's father, and who, I doubted not, was the poor victim who had thus, by the irony of fate, become the means of her destroyer's destruction. The man's object now was plain in not objecting to Margaret's fortune being settled on herself. It would thus have been protected from his numerous creditors; and doubtless he had intended to live on its proceeds—or as much thereof as he could have extorted from us by means of his wife—in some happy continental country where extradition treaties are unknown. I afterwards learned that the earlier years of his manhood had been devoted to mining, till a long course of failures had driven him to seek new pastures for his villainies nearer the great metropolis. Well indeed had the prophetic cards proclaimed him knave of spades, as many a poor widow and orphan child had learned to their bitter cost!

Starting the detective in search of our poor Margaret, I hurried back to the Crescent, my heart filled with conflicting feelings—deep gratitude to a merciful Providence for thus rescuing her from the degradation of an ill-fated marriage with a criminal, and anxious forebodings; for I knew not what fatal or irrevocable step the unhappy girl might have taken. 'Heaven help us!' I murmured fervently, as I placed my reluctant fingers on the bell-handle, for I dreaded the open door and the ill news that might be in store for me. Remorse and reproach lent a leaden weight to my heart. I had presumed too hastily in believing that Margaret was a willing

bride. I should have made stronger efforts to have gained her confidence. My old eyes grew dim, and I felt very aged and weak as my hand rested on the bell-handle I was afraid to pull; and I thought of my silent vow, when news was brought to me—years ago now—that she my soul had loved was no more, that I would be as a father to her orphaned girl. O Mary! can I meet thee again and say I have been faithful to my trust? When thou shalt ask me for thy little one, what answer shall I give thee? The sun may shine again, but dark and dreary is the chill interval while the passing storm-cloud veils his brightness. Passing! Yes; there lies our comfort. Passing—it cannot last for ever. Hope still finds a refuge in Pandora's box. 'Weeping may endure for a night, but joy cometh in the morning.'

CONCLUSION.

I had just rung the bell, when a hansom suddenly dashed up to the house. Some one threw back the doors with a noisy bang and sprang out, with a light step, on to the pavement. I turned round with a nervous start, for I dreaded the advent of fresh sorrows, and to my joyful astonishment recognised Walter.

'O Watty!' I cried, 'I am so thankful to see you. We are in such trouble. Margaret'—The words were arrested on my lips with glad surprise, for he was deliberately assisting the dear lost girl to alight.

'My father first,' she exclaimed in a kindly tone, as I went to take her in my arms; and walking quickly past me, she entered the house, for William had just opened the door in response to my ring.

Walter hurried after her, anxiety stamped on his face; and William and I, too much astonished to speak, followed them up-stairs to the drawing-room. There was a general burst of exclamations as we made our appearance. Walter linked Margaret's arm tenderly in his and led her to his father. There was a wistful yearning look in his bright blue eyes, and his honest manly face grew pale with emotion, that to my partial eyes imparted to it an added beauty. 'Father!' he cried in low earnest tones, as they stood before the old man—'forgive her. I alone am to blame.'

There was a pause; and my heart beat in rapid throbs with the anxious feelings which almost overpowered me. Colonel Sefton half-rose from his seat and made one or two efforts to speak. Pride and offended dignity may have been struggling for the mastery, but love proved stronger than either. He turned to Margaret and held out his arms. Not a word was spoken; but with a glad cry she threw herself into his loving embrace, and nestled her soft cheeks against the old warrior's weather-worn face.

Walter stood silently watching this scene. At last he spoke. 'Father!' he said, with a subdued pathos, 'have you no word to say to me?'

Afraid to trust himself to speak or to look at the bright young face looking so pleadingly at him, the proud old man turned his head aside and put out his hand, as if motioning him away.

Margaret saw the repelling movement and averted looks. Hastily rising to her feet, she

stood by Walter, and placed her two hands on his arm. 'Then you can have nothing to say to me,' she said, and her clear young voice spoke the words with firm decision as she drew herself up to her full height with stately dignity.

Colonel Sefton started at the sound of her voice. 'Come back, Margaret!' he cried in angry tones. 'What right have you to leave me, without my consent?'

'The right of a wife to stand by her husband, whatever may befall him!' The brave words rang out; and her pale cheeks flushed, and her eyes flashed and then filled with tears as she drew herself still closer to her husband's side.

'Wife!—Husband!' gasped the old man, as if he scarcely could take in the meaning of the words. 'Then you are married!' The words came suddenly, as if he had only just comprehended what had occurred, and then he threw himself back in his chair, and with a groan buried his face in his hands.

I thought that now the time had arrived for me to speak. In a few short telling sentences, I related the result of my visit to the detective, and did not fail to make good capital out of the merciful escape which Margaret had had from being linked for life to a felon.

Colonel Sefton kept his face covered with his hands, nearly the whole of the time that I was speaking, only shewing by an occasional groan that he heard what I was saying. The father's heart was yearning towards his boy, and the hard pride which had caused the estrangement between them was fast melting. As I finished my tale, the ice disappeared, and once again the stream of affection was set flowing. He held out his hand, trembling with the feebleness of age, and with loving force it was grasped by the strong hand of youth, as with tears glistening in his eyes, the long pent-up feelings of the young generous impulsive nature burst forth, and the unhappy past was bridged over, and father and son again were one.

I turned hastily from the scene, and pretended to look out of the window, for my work was done; but I could not see anything, for a dewy mist came before my eyes and obscured my sight. At last the ill-omened word 'money' struck upon my ears. As that had been the first cause of the quarrel between Walter and his father, I began to fear a fresh unpleasantness, and that I had been premature in thinking my work completed.

'Don't trouble, father,' Walter was saying. 'Margaret's money is all settled on herself. I cannot touch a farthing of it.' As he spoke, he drew from the pocket of his overcoat the deed of settlement that I had given to Margaret the preceding afternoon.

I hastily seized and opening the deed looked at the place where I had marked 'Owen Mainwaring' in pencil. The pencil-marks were obliterated; but in their place was written, in the bold dashing characters that I knew so well, 'Walter Sefton.' It was properly signed, and duly witnessed by no fewer than three witnesses.

'Am I not a good pupil, Mr Woodroffe?' laughingly asked Margaret as she pointed to the different places in the deed where the names of Owen Mainwaring occurred. I was obliged to confess that she had indeed been an apt pupil. The obnoxious names had been neatly ruled

through, and over each place the more welcome ones, 'Walter Sefton,' had been written in Margaret's fine Italian hand. Following my instructions, each alteration had been written by the side of it the initials of Walter and Margaret as well as those of the three witnesses.

I could not help laughing at Margaret's ingenuity in pumping me for information, and duping me out of the deed; for the Colonel had not sent for it, as I had imagined from what she had said to me, although with womanly sophistry she denied having told a fib, as she had only told me that the Colonel was anxious about the deed—which was the truth—and not that he had sent her to me for it. Walter had declared that he would not be married without her fortune being secured to his wife; and after much cogitation and many schemes for carrying out the project, it had struck Margaret that the deed which had been prepared for her marriage with the wretched man the Colonel had chosen for her, might, with a little alteration, be made to do just as well for her and Walter. The difficulty, however, was to obtain possession of it, and with this view, she had called at my office, as already related, when her efforts had proved more successful than she had anticipated.

They had been afraid to trust me with their secret, lest I should have warned the Colonel about it, or advised them against running counter to his wishes. They needed not to have been so distrustful; for if Margaret had confided her troubles to me, I would have done all in my power to have saved her from a distasteful marriage. Yet I did not feel quite sure that I was free from blame in the matter, as I could not hide from myself the fact that Margaret's repugnance to the match had been shewn rather plainly on the night of my visit to Harlowe Crescent; but as she had made no complaint to me—and she had had several opportunities at different times for doing so—I had thought that she had at last grown reconciled to her fate; and that as Walter seemed quite quiet about the matter, it would be better that I should let matters take their course, than, by an ill-timed interference, again wake discord.

I had long passed the days of youth, and was in the sere and yellow leaf, when riches begin to lose their charm. A successful life had enabled me to amass a large fortune; and as I always had intended that Walter and Margaret should share it when the green grass waved over my head, it was no self-denial for me to give to my godson Walter as a wedding gift that which made his fortune equal to his bride's. It still left more than enough for the comfort of an old bachelor during the few years that he will have to walk this earthly pilgrimage.

My determination relieved Colonel Sefton from the nightmare of pride which had been caused by his dread of its being thought that he had secured Margaret and her wealth for his son; and although he protested against it, yet I saw that he could not quite conceal his pleasure at this happy ending of his difficulties. I maintained my right to do as I pleased with my own; and his protestations were abruptly brought to a close by William, who with praiseworthy zeal for our creature comforts, threw open the door, and in a loud voice proclaimed that the *déjeûner* was served. His announcement

created a pleasant diversion ; and the bride and bridegroom leading the way, I offered my arm to Miss Bridget Percival, and the Colonel followed with the elder lady. And thus we gathered round the table, a subdued happiness filling our hearts as, with brimming glasses, we pledged the happy pair, and sought to forget the past in the brightness of the future ; for the king of hearts had indeed trumped the knave of spades. Hearts had won, and Margaret had scored the honours.

'Ah, Walter, you artful dog !' I exclaimed as the blushing bride was cutting the cake, 'I now know what you meant when, on the night that I told you of Margaret's engagement, you informed me that you were going to be married, and would guarantee that your choice would meet with my warmest approbation.'

Owen Mainwaring, alias Brooke, alias Dundas, alias 'Foxy Bill,' was tried and convicted for forgery—the other charges not being pressed, and a heavy sentence pronounced against him. His crafty and scheming spirit, however, could not rest quiet in durance, and he planned a desperate escape, in which he was nearly successful ; but a bullet from a warder's gun, as he was disappearing in the thick fog which enveloped the prison on the night of his attempt, closed his mortal career, and sent him, without a moment of warning, before the 'great Judge from whose dread verdict there is no appeal.

Colonel Sefton has long been gathered to his fathers ; and I must soon shuffle off this mortal coil and join the ranks of the Eternal ; but I am content to go, for Margaret is the cherished mistress of a fond and happy home ; and secure in her husband's love, she can spare the poor old bachelor, whose life's romance no one, but himself and Margaret's sainted mother, ever knew.

ORATORIO MUSIC AND ITS INFLUENCES.

No form of music so soon takes deep hold of the contemplative mind as that which is applied to Scriptural topics. Inspired writing, when presented to us in musical allegory, impresses the mind with greatly increased force, as any one will admit who has listened to Handel's magnificent choruses in the *Messiah*, or to the lovely melodies or recitatives by which the leading incidents in Christ's advent are told in that remarkable composition. Were we to inquire into the history of the oratorio, we should find it of comparatively recent date, although Old Testament writings leave no doubt that music on some well-devised system was the great medium for worshipping the Creator in the earliest times. In listening to sacred music well performed, men and women for the time forget the troubles of every-day life. The pleasant excitement caused by thrilling harmony is designed to have this effect, and any reader may be asked if he has not experienced such feelings during the performance of grand choral works ? Does not an auditor, during the progress of the music, leave mundane things behind, and feel something like a foretaste of the employment of good men in a future and better world than this ?

It is an undoubted fact that the salutary impressions produced by good oratorio music tend to the well-being of society, and ought to be encouraged. A modern example of such music

may be preceded by a brief allusion to what took place when Haydn the author of the *Creation* was about to take his leave of this world. Haydn had reached his seventy-eighth year when it was determined that his oratorio should be performed once more at Vienna, near which city he resided in a snug little villa. 'A hundred and sixty musicians met for the purpose. The audience numbered more than fifteen hundred people, filling the palace of Prince Lobkowitz, in which the concert was held. The poor old man insisted, notwithstanding his weakness, upon once more seeing that public assembled for whom he had laboured so much. He was conveyed in his arm-chair into the magnificent saloon, where every heart was affected. The Princess Esterhazy, and Madame de Kurtzbech, the friend of Haydn, met him. The flourishes of the orchestra and still more the agitation of the spectators, announced his arrival. He was placed in the middle of three rows of seats, occupied by his friends and the principal persons in Vienna. Before the music began, Salieri the director of the orchestra came to receive Haydn's orders. They embraced. Salieri then hastened to his place, and amidst the general emotion of the assembly the orchestra commenced. The effect produced by the sacred music, added to the sight of its great composer on the point of quitting this world, may be conceived. Surrounded by the nobility of Vienna and by his friends, by artists, and by lovely women, whose eyes were all fixed on him, listening to the praises of God which he himself had imagined, Haydn bade a glorious adieu to the world and to life. So much glory and love frequently caused him to weep, and he found himself much exhausted at the conclusion of the first act. His chair was then brought in ; and as he was about to leave the concert-room, ordering those who carried him to stop, he first bowed to the public ; and then turning to the orchestra with real German feeling, he raised his hands to heaven, and with tears in his eyes blessed the former companions of his labours.'

In this brief reminiscence of Haydn we see how he was loved, and how his inspired composition was the centre of that love, sending out its rays in every direction ; sometimes in vocal beauties, and at other times in grand instrumental representations of creative wisdom. Who has not experienced the thrilling effect of the well-declined recitative, 'And God created man, and breathed into his nostrils the breath of life,' followed by the unsurpassed melody, 'In native worth ;' and further where the descriptive sentence seems prolonged, to listen to the musical emphasis, 'To Heaven erect and tall—he stands—a man—the Lord—and king of Nature all.' How sweetly also, vocal and instrumental music blend in the description of man's higher intellectual faculties, thus, 'And in his eyes with brightness shines, The soul—the breath and image of his God.' And then the grandeur of this individual creation is acknowledged in the magnificent chorus, 'Achieved is the glorious work.'

While, therefore, the veneration which all lovers of music feel for Haydn is as fervent now as it was at the time to which we have alluded, and about which people read as though it was an event never to be repeated ; it is most pleasing to know that England has a living composer, whose most

recent work evoked an ovation akin to that which Haydn experienced. There are many talented composers of secular music in the kingdom; but we are simply alluding to oratorio music, and England may be proud of the man who produced the oratorio *Joseph*, first performed at the Leeds Musical Festival in September 1877. The soul-stirring grandeur of the composition, and the completeness with which it was rendered, must increase the conviction that the United Kingdom holds its own in point of musical composition. Professor Macfarren, the author of the oratorio, holds the distinguished position of head of the Royal Academy of Music. The Professor composed the oratorio at the request of the Festival Committee; and in submitting the work to the immense representative audience then gathered, the music went direct to the hearts of the people. From beginning to end there was breathless attention; music and words alike commanded the deepest sympathy. That undercurrent of conversation which so often mars the enjoyment of music, was entirely absent. Old and young both listened with appreciation. Many eyes were brought to tears of enjoyment, and many cheeks quivered with that excitement which music alone can call up.

It is not intended here to give a detailed description of the oratorio, but just to indicate the success of the first performance. The Biblical narrative of *Joseph* is full of incidents susceptible of fine emotional music; and Dr E. J. Monk of York Minster, who arranged the text, knew well the highly sensitive mind and heart of the composer—his brother-in-law. The first part of the oratorio is laid in Canaan, and the second in Egypt. The chief characters are Jacob, Reuben, Joseph, Benjamin, and Pharaoh. Then there is a semi-chorus of the Nine Brethren, and choruses of Shepherds, Ishmaelites, Egyptians, and Wise Men. The orchestration is more elaborate and effective than can be found in almost any previous work whether sacred or secular. In its general effect the music is pastoral, reminding one of the tent-life of the Patriarchs. The choruses are all grand and highly descriptive, whether they are sung by Shepherds, Ishmaelites, or Egyptians, and they are all associated with characteristic instrumental music suggestive of antiquity. As an instance of fine melody we may mention Jacob's opening song, 'I dwell in the land wherein my father was a stranger; By faith he sojourned in the land of promise as in a strange country, &c. More inspiring melody can scarcely be imagined. And then the melody becomes a duet, or dialogue between Jacob and Joseph. Jacob rejoicing in his song, declares that he loves Joseph more than all his children, because he was the son of his old age, hence he had made him a coat of many colours. Joseph responds, rejoicing in such loving favour. These are the first vocal numbers of the oratorio, and they bespeak for the whole work an interest which does not flag in a single note. Chorus, song, and dialogue follow for a couple of hours with unabated interest, and that interest is bound up with delightful instrumentation. At times it is bold and martial; at other times soft and diffusive.

Many novel effects are of course imported into Ishmaelitic and Egyptian music by the aid of instruments which are not found in common use. The harp too is employed with remarkable effect, and chiefly in the melodies. At the close

of the oratorio the audience gave way to their pent-up feelings of admiration in an ovation, which increased as the Professor was led to the front of the orchestra by his brother, Mr Walter Macfarren, who conducted the performance. The Professor, it will be remembered, is blind; and the scene which now presented itself was one that can never be forgotten by those who had the privilege of participating therein. The audience included men eminent in science and art; and as the fair sex graced the palace when Haydn bade adieu to the world, so did it constitute nearly half the audience in the magnificent town-hall at Leeds, and share in the emotion of the hour. They saw before them the composer of a work which appealed to their sympathies and evoked the highest feelings of their nature—a work rendered as nearly as possible perfect, by the artists engaged in its delivery, and notably by the exquisite voices of Santley and Foli.

An elevating tendency is thus the mission of oratorio music, and as such is a species of public recreation which it would be well to promote.

WILD SPORT IN PATAGONIA.

AMONG the many curious types of semi-civilised man to be found on the continent of South America, not the least remarkable is the ostrich-hunter, who roams over the territory extending between the fortieth and fifty-third degree of south latitude, between the Cordilleras and the sea. Let the reader picture to himself a perfectly desolate region, shut in by the forbidding Patagonian coast; a long line of black rugged rocks, where Magellan and his brave followers landed in 1520, and Drake some sixty years later; a desert extending for about seven hundred miles, with an area of twice the extent of that of Great Britain, consisting only of immense arid plains, with here and there a glittering salt lake, and broken occasionally by deep ravines or cañons, with their scanty patches of alluvial soil. For thirty or forty miles at a stretch nothing is to be seen but this sombre landscape; a few straggling stunted bushes being the only shelter from the fierce winds which sweep continually over these apparently boundless wastes.

'Nature must have made Patagonia last of all her works; and the horn of Plenty from which an abundance of rich gifts had been poured over the rest of the world, was well nigh exhausted when that country's turn to be endowed came round.' So says a writer who has lately visited it. And yet this same writer, Mr Beerholm, confesses to having experienced that strange fascination which is cast by this singular region over all who care for a time to intermingle with its necessarily sparse population. Here are to be found at certain spots encampments of the Tehuelche Indians, who, notwithstanding their decided physical and intellectual superiority over the greater part of their race, have been gradually driven southwards by the more warlike tribes; and here too, joyfully casting aside the fetters of civilisation, and facing a life of hardship and privation, dwells the ostrich-hunter. The man who adopts this peculiar vocation may be very frequently an Argentine guacho with a dash of Indian blood in his veins; but just as often he is a being of European nationality, whom accident has trans-

ferred to these regions, and who has adopted the life with as much enthusiasm as one 'to the manner born.' The whole equipment for the profession consists in a few horses and dogs, a lasso, a pair of bolas—the use of which we shall presently describe—a hunting-knife and steel, the riding accoutrements (which serve for a bed), and the indispensable capa or robe of guanaco fur. Without this latter it would be impossible to brave the biting winds and hail-storms, or to ward off the pitiless rain, which will pour down at certain seasons for days together without intermission. The dress of the ostrich-hunter consists of a shirt, a jacket, a chiripá or kind of kilt, fastened by a broad leather belt, in which he sticks his knife, revolver, pipe and tobacco-pouch; and a pair of potro boots, made in simple fashion from the skin of the leg of the horse taken off whole, softened patiently by hand, and adapted by wear to the shape of the foot. Most of his requirements are furnished to him by the guanaco—a species of alpaca—with the hide of which he makes his lasso, reins, bolas, and shoes, the flesh being also his main food. His other necessities, prominent amongst which are his tobacco and his maté or tea, he obtains by selling his ostrich feathers at Sandy Point, in the Straits of Magellan.

It is usual for two or three hunters to join company, to assist each other in their difficulties and dangers; to cheer the nights by the camp-fire, or the days of forced inaction by story or song; for the hunter is an easy-going vagabond, free alike from regrets for the past or cares for the morrow, who bears with philosophical indifference whatever fate may have in store for him.

There are two kinds of ostrich in Patagonia—the Avestruz moro (*Rhea Americana*), which is found in the north, near the Rio Negro; and the *Rhea Darwinii*, a smaller bird, that frequents the southern plains. Neither is equal in value to the African ostrich; the feathers, which are gray in the Avestruz moro, and brown and white in the *Rhea Darwinii*, being sold at the low price of from one to two dollars per pound. The latter bird is extremely shy, possessing very acute powers of vision, and requiring an exceedingly swift dog to bring it down.

When closely pressed, the ostrich will double like the hare; and thus often escapes the hounds, which are unable to stop suddenly in their impetuous course. Should the hunter be near enough to do so with effect, he swings his bolas two or three times round his head, and flinging them at the bird, brings it to the ground. These bolas—round stones or pieces of lead sewn up in the hide of the guanaco, and united by thongs of leather—are used with the greatest precision by one who is accustomed to them; a skilful man will throw them, for instance, at a refractory colt at full gallop, and pinion his hind-legs without doing him the least damage. But as it is immensely difficult to gain this art, which requires great confidence and nerve, the novice will frequently find himself throwing the bolas in precisely the opposite direction from that intended.

The Patagonian ostrich makes its nest by scooping a hole in the ground under the shelter of a bush, and placing in it a few wisps of grass to make it soft for the chicks. From ten to forty eggs may be found in a nest, twenty being, however, the usual number; and it is the male bird that takes

upon itself the duty of hatching the eggs and looking after the young. Contrary to received opinions, he is a most exemplary parent; and during rainy weather will patiently sit upon the nest for many days at a stretch; and although in fine weather he will graze for an hour or two in the evening, he will never wander to any distance, for fear of the foxes, which are always prowling about. It is said, however, that should one egg be broken or taken away, the bird will immediately miss it, and becoming furious, will dash the remaining ones to pieces.

After the hatching period, the ostrich will lay anywhere about the plains; and these eggs, which the natives call 'heutchos,' will keep good for as long a period as six months, and are consequently very valuable to the hunter, when his other provisions become exhausted.

The yerba maté, the leaf of the *Ilex Paraguensis*, dried and reduced to powder, is in fact the tea of South America; and from its power of resisting damp and exposure, as well as from its stimulating and refreshing properties, is exceedingly valuable to the traveller. But indeed the maté bowl is perpetually in demand at all seasons and with every class of people in South America, while yerba forms an important article of export from Paraguay. At Sandy Point the ostrich-hunter, as we have already stated, sells his feathers and obtains his supply of maté, tobacco, rice, and biscuit; and as his visits to that distant spot are few and far between, it often happens that he is denied even these. On such occasions, although the amount of meat which he consumes is something astounding, he is nevertheless tormented with an almost insatiable hunger, and his strength diminishes perceptibly; indeed, but for the ostrich eggs, of which, notwithstanding their indigestible character, he contrives to eat an immense number, the Pampas-hunter would be reduced to terrible straits.

The flesh of the ostrich, of which the best bits are the gizzard and the wings, is said to be not unlike that of the turkey, and some of the hunters having attained to no slight skill in Pampas cookery, serve it up in various ways. The menu is varied by a fat guanaco, or by a puma when in season, as well as by the small armadillo and several kinds of birds. The armadillo is considered quite a delicacy, and the puma is also much prized. This animal is the enemy of the ostrich and guanaco, being able to kill one of the latter, even when full grown, by a single blow of its paw.

It is, however, very cowardly, and will scarcely defend itself when attacked by man. If taken young the puma can be easily tamed, and makes a playful good-tempered pet, becoming much attached to its master and extremely fond of notice and caresses.

Guanacos are generally found in herds of from one to two hundred, although occasionally an old male may be found roaming alone. They inhabit Patagonia in immense numbers, and are fond of wading or standing in the salt lakes. The head of the animal resembles that of a camel, while the body is somewhat like the deer; the wool of a reddish yellow mixed with white. These creatures always post sentinels at some distance from their main body, which give warning of the approach of danger by a shrill cry not unlike the neighing of

a horse. It is from the skins of the young ones, when not more than three weeks old, that the Indian women form the capa, sewing them together very cleverly with their rude bone needles, and using guanaco sinews instead of thread. The dowry of a Tehuelche maiden consists very frequently of three or four new guanaco mantles; while the price, paid for her by her lover will probably be six or eight mares, with the addition of some sugar and biscuit, or anything he may be able to obtain; and it is from amongst these people that the Patagonian hunter, if he goes in for such a luxury, will in most cases select his bride. If, however, matrimony does not prove agreeable to him, he will without ceremony return the recalcitrant fair one to her father's tent; and indeed, as a rule the hunter prefers to lead his wild life without being bound by ties of any kind.

He is, as has been seen, an exceptional character, his distinguishing traits being a love of liberty and an aversion to everything conventional. From the Indians he has learned the art of taming wild horses, some men being wonderful adepts in this line. Bravery, watchfulness, endurance, and sharpness of vision are the special qualifications for success, and in none of these is he found to fail; and so fascinating is the mode of life which the Pampas-hunter has adopted, that he scarcely ever exchanges it for any other. Indeed, it would seem impossible to him, after having tasted the delights of unbridled freedom and intimate communion with nature, to ever again resign himself to what he considers the annoying shackles of civilised existence.

THE OUBLIETTE.

PART II.—THE SECRETS OF PLESSIS LES TOURS.

LIFE has gone hardly with the Marquis of Clair-marais since we beheld him last. Before leaving Plessis les Tours, Louis had seen with his own eyes his 'instructions' carried out; and in one of the dungeons of which Claude had until then only heard, he had leisure to learn at what cost one braves the whims of an autocratic king.

What, compared with his now dreadful abode, was imprisonment in the comparatively pleasant gateway tower—with dainty food, space, and air, the sound of human voices, the society of Léonie? Let us look at the unfortunate Marquis as he sits in his dreary abode many months later. It is a vaulted cell, close to and below the moat. The massive stone walls are green and slimy with damp. Slimy also are the creatures that crawl over them. As to furniture, there is a ponderous oaken table, fixed to the floor; a rough block of stone for a seat; and a bench, also of stone, jutting out from the wall and covered with a straw palliase, dirty and foul in odour. From the roof, suspended by strong chains, hangs an iron lamp. Upon the table are a pitcher of water and a lump of black bread partly eaten. The only light and air that enter this wretched place come from a narrow embrasure high up in the wall, so high, that even by standing upon his couch, Claude fails to reach it with the tip of his finger.

Twelve months of this existence have wrought

a woful change in our once gay Marquis. The king's discipline has done its work, aided by the despair to which Claude has now abandoned himself. He sits by the table, his head bowed down upon his thin white hands. One solitary gleam of sunshine comes through the loophole, and falls tenderly upon his fair hair, now tumbled and uncared for, lighting it up for a time with a shadow of its old glory—that golden hair which caught the heart of Léonie Lamarque in its silken meshes. For so long the lonely captive has been debarred the sight of sunshine, that he has ceased to look for it, and does not notice it now. In motionless apathy, that apathy which is born only when hope dies utterly, he awaits whatever may yet befall him. Perhaps just now he sleeps, and dreams of freedom!

One may perhaps wonder why the kind-hearted governor of Plessis does not ameliorate, as we imagine he could, the rigours of Claude's miserable life. But Louis had taken care of that. Whether he had cause to suspect undue leniency on the part of M. Lamarque, or whether it was dictated solely by the distrust inherent in the king's character, he had announced, before his return to Paris, that for the future the governor should visit no prisoner except in the company of two warders, chosen by himself—Louis. He condescended to explain that it was unwise to expose so valuable a life as that of his trustworthy servant, M. Lamarque, to the chance of an attack from a perhaps desperate prisoner, and therefore it was needful that assistants should be at hand; which assistants he provided. Spies, these undoubtedly were—men only too glad to report any dereliction of duty to the tyrant Louis—men only too glad to rise upon the governor's fall. In those days, the hand of so-called Justice was swift, the distance from prison to grave short!

When the unlucky Marquis of Clair-marais was first removed from the gateway tower to the dungeon, Gustave Chapellier was inclined to congratulate himself thereupon. It seemed to his benighted mind that the fact opened a straighter road to Léonie's favour. 'She would,' he said to himself, 'forget her passing fancy when she saw its fascinating cause no more;' proving by that foolish remark how utterly ignorant he was of a woman's heart. Time brought him wisdom. Claude was gone certainly, if that was any consolation to an unappreciated suitor; but was that suitor's case advanced thereby? Alas for Gustave! he found, to his disgust, that Léonie Lamarque was further from him than ever. She tolerated him before; she utterly avoided him now. If he ventured to join her on the ramparts or seek her in her mother's room, she treated him with a cold indifference. If he spoke to her, she seldom answered; but the brown eyes gazed straight before her into vacancy, into a region where Gustave was not! And the light had faded from those weary eyes, with their now constant far-away look, for they 'were with her heart,' and that was in the cell of Claude d'Estrelles. Not in idle sorrow only. Of what avail is that to those we love? But help—practical help—how could Léonie give it, as brave and faithful women had given it before to those men who were dear to them? That was the thought which day and night wearied the brain of the governor's fair child; which was with her,

imperative though almost hopeless, in her daily duties, her solitary walks round the moat, her prayers.

Like nearly all unmarried French women, Léonie was devout. Having been educated in a convent near Plessis, it was her custom to go there at least once a week for the purpose of visiting the good nuns, who gladly welcomed her, and in whose charge she frequently remained all night. On these expeditions she rode her own black horse Haroun, accompanied by her own particular page Silvain, a lad devoted to his young mistress. And as no one would have been bold enough to molest the daughter of so powerful a man as the governor of Plessis, Léonie's rides were taken when and where she chose. Of late, these visits to the convent of Sainte Marguerite had been almost daily. She prayed earnestly for guidance from heaven; she vowed offerings endless and rich to her patron Saint Léon and to the Blessed Virgin, if assistance were given her in this hour of need.

At length the maiden's prayers for aid in behalf of her hapless lover were apparently heard; for falling asleep one night with Claude's name upon her lips, Léonie dreamed a strange dream. She was in the old chapel of the castle, when a panel in the carved reredos behind the altar flew open, and a shadowy hand pointed into a gloomy passage. She stepped into the passage, through which a shadowy form guided her steps, and a voice sad and faint, coming apparently from far away, seemed repeating to her: 'The secret way is here.' Then by one of those transitions so easy in our dreams, from an actor she became only a spectator. She saw the Marquis of Clair-marais in his dungeon, pallid and woe-begone, and sought to approach him, but could not. A something held her back, while still the same voice murmured in her ear: 'The secret way; look! the secret way.' And behold, the massive stone wall opened, and a semblance of herself, carrying a lamp, which flooded the dungeon with its light, came through. The vision approached the Marquis, and taking his hand, drew him to the dark opening. There seemed to be some words of joyful parting; then Claude disappeared; the wall closed, and the figure slowly vanished where it stood, the light dying out as the vision passed away.

'The saints have heard me!' was the young girl's joyful exclamation as she sprang up, while yet the dew lay upon the fair fields around Plessis, and threw herself down before the little oratory of her room in passionate thankfulness.

That night, when silence and sleep fell upon the fortress, Léonie, noiseless as a ghost, visited the chapel in that portion of the old building which yet remained after Louis XI. had built himself a palace whose stones were cemented with blood. Fortunately, the way to it was easy and the risk of detection not great. No restless priest kept vigil there. The tapers burning day and night before the Virgin's shrine, gave light enough for the work in hand; and commending herself to heaven, Léonie searched long and patiently upon her knees for a secret spring in the beautiful oaken reredos. For a long time—so long that the tapers were growing dim in the gray dawn—that search was made in vain. But success came at last. A

click—a small panel flew open, and disclosed—what? Alas! no passage, but a little cavity about two feet square, in which lay some dusty papers. Léonie swept them impatiently on to the floor, and examined carefully the opening—to no purpose. The stone wall was everywhere impenetrable; there was no sign of anything which could be used as a secret spring; and indeed had there been any, it was impossible that even Léonie's slender form could have pushed itself through the opening, still less the broader shoulders of a man. Weary and sick-hearted, the governor's daughter leaned against the altar. Of what avail were her prayers? The dream had only mocked her after all. The bitterness of this disappointment taught her how much she had hoped, and how foolishly.

The light growing stronger, warned her of the danger of being found where she was; and mechanically picking up the papers, she closed the panel and fled away to her room. Fate befriended her; she met no curious inquirers. And concealing the papers, she lay down to rest, baffled, but not conquered.

That evening, just before sunset, Léonie stood at her casement with the papers taken from the chapel, in her hand. She turned them over, having first secured her door, and looked at them idly. They were old and musty. Recalls of the unhappy men who had been incarcerated at Plessis, disappearing finally from human ken by means known only to the initiated; warrants, accounts, letters, such things as governors might accumulate during their regency. Disheartened, she gazed at them without interest. They did not bring her nearer to Claude. One scroll of vellum rolled off the table to her feet, and picking it up, she glanced at it carelessly before pushing it aside with the others. The glance was sufficient, for Léonie held in her hands a plan, clear and distinct, of the secret passages of Plessis les Tours! And so the blessed dream had not been all in vain. For a while she studied the plan intently, dismissing from her mind as impracticable many ways of which the approaches were too hazardous, too closely guarded; when suddenly she went swiftly to her bedside, where a carved wooden wainscot rose to meet the tapestry hangings, and sought a particular group of flowers. Therein, according to the scroll, lay a spring, and beyond it a passage leading to the dreary cell, wherein Claude was slowly lingering out his days.

Some time elapsed before Léonie could move the spring, stiff no doubt from long disuse. But finally it yielded; the panel creaked upon its rusty hinges, and there was the passage, gloomy-looking as a grave. The hour was favourable for exploration. Madame had gone into the town; the governor was occupied in compiling reports; and the maiden was safe from interruption for a while. Lighting a lamp, she passed into the opening. The way was narrow, dusty, and utterly dark, but supplied with air from one or two narrow slits in the wall, which was evidently the outer one of the castle. She shaded her lamp, that no gleam might betray her to any unfriendly eyes, although the chances of such a thing were small. Presently she came to a flight of steps; after that, another level. Then again steps, and these were green and slippery; the walls also were stained with moisture and moss-grown. The air that came through the apertures was chill and dank. Léonie shivering

in her thin white dress, shaded more carefully the lamp, which flickered in the strong draught. And now, suddenly she came to a stand-still. Her further progress was barred by an impenetrable wall of stone. It rose before her, massive and unyielding, with no sign of panel or door on its sullen face. She raised the light, and studied eagerly its rough surface; the ponderous stones covered with patches of moss, dripped with moisture, and were stained a dull red and brown by the action of time and damp. Presently her hand came in contact with a small iron bolt; and setting down her lamp, Léonie sought with all her strength—the strength of love and devotion—to move it. At length the stubborn bolt gave way, and one of the ponderous stones revolving upon a secret spring, fell back, leaving an open space. The strong will had at last won the way; and with a beating heart Léonie stepped into the dungeon of Claude d'Estrelles!

It was past sunset. At any moment the warders might be expected to make their usual rounds; and the governor's daughter remained only long enough to whisper hope and comfort to the captive, promising to return later on, when they would be safe from spies and interruption. And so they met night after night, discussing plans, possible and impossible, for Claude's deliverance; while strengthening food and wine, procured for Léonie by the faithful Silvain, soon wrought a healthful change in Claude's pallid cheeks and sunken eyes. He dared not trim his ragged locks and beard, or seek to improve the appearance of his soiled garments. Suspicion's quick glance would have detected the change. But steadily, surely, he gained strength as the days went on. And the mother and father rejoiced to see that Léonie grew brighter than she had been for many weary months, dreaming little of the hidden cause.

Grave and momentous were these interviews between the lover; and though a beginning had been effected, how much remained to be done, before the Marquis of Clair-malais should see the outside of Plessis les Tours' grim walls! One scheme was pondered and discussed often. Its very simplicity was a recommendation; by that bold simplicity it might succeed. And so it was finally accepted and decided upon. And the 10th of June—one fortnight from that day—was fixed for the attempt which must make or mar the captive's fortunes and the fortunes of his abettors.

The time arrived. The 10th of June rose fair and bright. Léonie saw in it an omen of good fortune. But unknown to the lovers, it also lighted on his way the death-messenger from Louis! Impossible to say what caused this sudden decision on the part of the king; but so it was. Claude's sentence had gone forth. Death in its most secret, cowardly form—death by the oubliette.

A miserable man was the governor of Plessis when that warrant was placed in his hands by the envoy from Paris. It was hard enough to work the will of a merciless despot in any case. But the Marquis! the gay, pleasant young noble, who, twelve months before, had been so intimate a companion at his table—that he should be hurled to his death at midnight by pitiless hands, unbonoured, unshrived! The thought stopped the beating of M. Lamarque's kindly heart, and paled his cheek

with sickening horror. All that day he went about mechanically—like one who sees a ghastly vision, denied to other eyes. Léonie, pallid and thoughtful also, noticed her father's curious pre-occupation; but he avoided all questioning with a stern moroseness unusual with him. He heard, however, gladly, that Léonie intended visiting the convent of Sainte Marguerite that evening.

'Yes, yes; go, my child. Remain all night, and remember to pray earnestly for all unfortunates.'

'I will, my father.'

The governor shut himself up in his private apartment, thankful that the maiden would be away from Plessis' evil precincts when that unholy deed was done.

Just before sunset, Silvain brought the horses to the lodge-door. His companion mounted, and rode slowly down the court-yard, returning gravely the salutes of the soldiers who were on guard or loitering about, Silvain engaging in a laughing war of words with one of the warders standing by the great gate. After a trifling delay, the portcullis was raised; the drawbridge chains rattled as the ponderous apparatus fell clattering into its place, and the riders passed out, steadily walking their horses until a turn of the road hid them from view.

When it grew dusk, and the time came for changing the outer guard, the drawbridge was lowered once more, to permit the exit of the night patrol. With them passed out a Sister wearing the dark-blue robes and large coif of Sainte Marguerite's convent. A black muslin veil was thrown over her coif, partly shading her features.

'A good-night to you, my Mother,' said the porter, respectfully removing his cap. The Sister murmured something in return. The soldiers quickly made way for her.

'Who is it then?' said a new-comer of the guard to his comrade.

'Mother Angélique of Sainte Marguerite's,' replied the other, who was busy tightening the girths of his horse. 'She comes often to visit our ladies. She has stayed late to-day talking with Madame, no doubt. A good woman, the Mother Angélique, they say.'

'They are all good, these religious ones,' returned the other. 'But name of grace! 'tis but a dull life, it seems to me, for a woman, unless she's old and gray.'

And so talking, the men went out into the dusk, and the quiet Sister passed out of their sight.

Ten o'clock struck. M. Lamarque resolved to look once more upon the young Marquis, whose minutes of existence were so cruelly numbered, and whose murder was already arranged with those whom Louis had selected for that evil duty. His chosen warders had visited the prisoner that afternoon as usual, carrying him his ordinary allowance of bread and water, and had themselves locked the door which was never again to open for him. Eluding for once the vigilance of those warders, the governor went stealthily to the northern tower.

'Pray heaven he sleeps,' whispered he, as quietly opening the door, he raised the lamp and glanced into the cell. Claude d'Estrelles, his miserable coverlet thrown over him, lay upon his pallet. His face was turned to the wall. He never stirred. For a moment, during which he uttered a voiceless prayer, the governor gazed sadly upon the tangled

fair hair on which the lamp-light gleamed. Then reverently closing the door, M. Lamarque retreated with a heavy heart. Midnight came. The emissaries of Louis went to their appointed work. Swiftly and silently the well-oiled bolts were withdrawn. The floor opened. There was a crashing fall as the pallet and its occupant went down, and then the hideous trap closed again over its hidden prey.

SOME STRANGE GASTRONOMIC EXPERIENCES.

THE Chevalier Morelet, travelling in Central America, took up his quarters at an inn in Campeachy where the best fare the country afforded was to be obtained. On sitting down to his first dinner there, he saw, occupying a conspicuous place on the table, a dish, of the nature of which he felt extremely dubious; and seeking enlightenment from the cook, learned it was the flesh of the cazone, a creature of which he had hitherto never heard. Strolling along the beach the same evening, M. Morelet observed a fisherman towing behind his boat some sort of sea-monster, which he instinctively connected with the mysterious dish at the inn, and asked the man what fish he had got there. 'Don't you see they are cazones?' was the answering query. 'Cazones!' retorted the Frenchman; 'they are sharks!' 'Why not?' quoth the fisherman; and the murder was out. Anxious to avoid shocking the susceptibilities of strangers, the good people of Campeachy have banished the word 'turberon'—Spanish for shark—from their vocabulary, and serve up the cruel sea-monster as 'cazone'; eating it fresh and salted, roast, boiled, or fried, with such gusto that the Chevalier declares the cazone ought to be emblazoned in the arms of the city.

M. Morelet apparently lacked courage to taste the delicacy beloved by Campeachians, forgetting that a traveller should be above gastronomic prejudices, and ready to accommodate his appetite to any exigency; as his countrymen contrived to do during the siege of Paris. When lean chickens fetched eighty francs, a small rabbit fifty, and elephant went at eighteen francs a pound; cat, dog, rat, and mouse were about the only meat within the reach of folks of moderate means.

The dire necessity that made the Parisians acquainted with such strange meats passed away, but not the taste so created. Not only has horse-flesh become a recognised food, but many another dietetic dainty undreamed of in the epicurean philosophy of Paris before the siege, finds favour with citizens with strong appetites and poor purses; and doubtless the enterprising caterer who sought the suffrages of *gourmets* without prejudices, by opening a shop for the sale of badgers, weasels, ferrets, foxes, jays, rooks, owls, crows, magpies, and *gibier des gouttières*—that is, cats, rats, and mice, has been amply rewarded for his pains; and will be able to retire from business long before the directors of the Jardin des Plantes

have succeeded in acclimatising the edible dog of China.

Some score or so of contributors to a French sporting journal dined one day upon the ham and heart of a lion, killed by Constant Cheret in Algeria. The flesh of the lion was found to be particularly firm and close-grained, like that of a horse; but although pronounced palatable, it only achieved what is termed a *succès d'estime*; while the heart, skilfully prepared with truffles, was unanimously voted tough and indigestible. In fact, the French journalists were not much better pleased with their fare than was Bruce the traveller, when the guest of the Arab tribe of Welled Sidi Boojanim, 'the sons of the fathers of the flocks,' bound by vow to eat lion's flesh once every day; for the traveller found male lion-meat lean, tough, and musky in flavour; lioness-meat a trifle fatter and more palatable; and whelp-flesh the nastiest of the three.

Mindful that an unlooked-for pleasure is thrice welcome, Frank Buckland did not advise his guests on a certain occasion that they were about to enlarge their gastronomic experiences; but when the soup had been disposed of, asked a famous gourmand sitting near him how he liked it.

'Very well indeed,' was the answer. 'Turtle, is it not? I only ask because I did not find any green fat.'

Buckland shook his head.

'I fancied it had a somewhat musky taste—peculiar, but not at all unpleasant,' remarked his neighbour.

'All alligators have,' replied the host, 'the cayman especially—the fellow I dissected this morning, and which you have just been discussing.'

Half-a-dozen of the suddenly enlightened diners started to their feet, two or three slunk from the room, and the rest of the meal was enjoyed by only a portion of the original company.

'See what imagination is!' said Buckland. 'Had I told them it was turtle, or terrapin, or bird's-nest soup, or the gluten of a fish from the maw of a sea-bird, they would have pronounced it excellent, and their digestion would have been none the worse. I tell them it is alligator soup, and their gorges rise at as good a dish as ever a man need have!'

Forewarned, and therefore forearmed, were the gentlemen who lunched on octopus at the Brighton Aquarium, trying it in turn boiled, broiled, and cold. They found it excellent eating, resembling skate, but not so tender as might be. The verdict would probably have been still more favourable had the octopus been boiled first and then roasted, as is the way in Corsica, where the monster is esteemed a great delicacy.

A traveller returning to Tallahassee from a hunting excursion in Florida, was being paddled along by the shore about sunset, when suddenly a strange, grave, and prolonged sound struck his ear, and seeing nothing, he asked the negro boatman what it could be. 'O massa,' said he, 'dat is de fish dat sings. Some call it siren or mermaid-fish, and others musico.' As the canoe went farther the chorus of strange voices increased in volume, and the negro was requested to throw a net in the water. He obeyed orders; and soon laid at the bottom of the boat a score of little fish about two inches long, resembling the gray mullet

in outward form. 'Dese be mermaids, massa,' said the black; 'but for de lub o' mussy, don't eat dem! They hab de lub poison. Yes, massa; when you eat one of dese fish, you fall so deep in lub you can neber get out again.' This extraordinary information did not prevent its recipient having his muscos fried, and finding himself no worse for supping than Agassiz did for breakfasting on strange fish. In the case of the latter, the experiment was made involuntarily. While pursuing his ocean researches on the coast of America, Agassiz had occasion to visit a friend's house, and took with him a copper barrel filled with alcohol, in which he had placed a number of undescribed species of fishes, some of them entirely unknown to science, to preserve them till he had leisure to examine them. For safe keeping, the barrel was put in the basement; but his friend's cook, of her own discretion, or rather indiscretion, emptied it of its contents, and fried the precious collection for the great naturalist's breakfast!

Exceedingly fishy, in more senses than one, is the Chinese *menu*. In 1867, Sir Charles Macdonnell gave a Mandarin supper at Hong-kong to the Duc de Penthièvre, the Comte de Beauvoir, and some other French gentlemen; and here is what appeared on the board—Bird's-nest soup, lily-seed soup, shark's-fat soup, shark fins in gelatinous sauce, sturgeon gills in *compote*, whale nerves with sweet sauce, fish-roe in caramel sauce, croquettes of fish and rat, stewed sea-snails with tadpoles, hashed dog with lotus sauce, cakes of coagulated blood; a sweet compound of fish-fins, fruit, ham, almonds, and essences; the feast finishing up with lotus and almond soup, warm arrack, and medicated wine. We think we would rather dine with Bishop Bompas, of the diocese of Athabaska, in North America, although that worthy prelate's dietary be confined to white-fish, pemican, moose nose, squirrel stew, deer's tongue, roast lynx, and roast beaver; with stewed rat now and then by way of a treat, and the occasional luxury of cake made of seaweed, poplar bark, herring spawn, bitter berries, seal-oil sauce, and the grease of the olukun fish.

The Athabaskan larder is not too sumptuously provided; but the Bishop is hardly to be pitied perhaps, able as he is to indulge in stewed rat and squirrel; seeing how enthusiastically a well-known naturalist labours to convince us that the last named is a most delectable dish, while rat-pie is so good that it ought to appear at every man's table. If Buckland could only make the multitude of his way of thinking, the much-to-be-desired cheapening of butcher-meat would come about more quickly than it is likely to do.

There are people who hold the butcher's trade to be altogether unnecessary. Mr Lawson, of Blennerhasset, Cumberland, one Christmas-day provided a spread for all comers, at which the usual concomitants of a Christmas feast were conspicuous by their absence. The holiday fare consisted of raw turnips, boiled cabbage, boiled barley, boiled wheat, shelled pease; oatmeal gruel enriched with chopped carrots, turnips, and cabbage; salads of the same vegetables covered with linseed jelly; and potatoes—the only hot dish on the table. There were no condiments of any sort; and for dessert each guest had to be contented with an apple and a dry biscuit. The banquet did not give the satisfaction its provider expected.

Too many cooks may spoil the broth; but one, if insufficiently instructed, will suffice to effect that untoward consummation. By simply neglecting to boil it in a cloth, Lord Malmesbury's French *chef* converted his plum-pudding into that Christmas dainty's progenitor, plum-porridge. Prince Metternich becoming acquainted with the merits of rhubarb tart in England, had the plant grown in his Austrian garden; and when it came to its proper growth, gave a dinner-party, in order to introduce rhubarb tart to Austrian gourmands. Unfortunately, the Prince, instead of specially instructing his cook, merely ordered him to serve the rhubarb up dressed as it was in England. Knowing nothing of English usage, the cook, selecting the largest leaves, served them as spinach, causing many wry faces to appear at the board, at which the English dish never again appeared.

Equally unlucky was Mr Peabody when, having received a gift of ten ears of green maize, he determined to renew the recollections of his youth, and at the same time delight his American, and astonish his English friends by having it served in American style. Plates of butter and salt were set before each guest, and the host announced he was about to treat them to a most delicious American dish. Then entered the butler, bearing a large covered dish, which he solemnly deposited in front of Mr Peabody. In another moment he had whisked off the cover, and the expectant diners beheld a pile of corn-cobs. The banker gazed for an instant in mute horror and dismay, ere he found voice to summon the cook—a man who had never seen an ear of Indian corn in his life before—and demand an explanation. He maintained he had followed his master's instructions to strip off all the outside before boiling; the truth being he had bettered those instructions by taking off not only the husks but the kernels as well.

An English travelling party passing, some hundred years back, through Charlton, Massachusetts, gave the landlady of the inn at which they put up some coffee and tea to prepare for breakfast, the former unground. The dame had never set eyes on either till then, but was not inclined to acknowledge her ignorance; so, when the travellers called for their tea and coffee, she astonished them by announcing that the 'yarbs' were done, but the 'beans' would not boil soft.

Anything one eats or imbibes with pleasure to the palate, followed by no unpleasant after-sensations, should be taken for granted. It is courting discomfort to pry too curiously into its composition. Some forty years ago, the ship *Governor Endicott* arrived at Salem, Massachusetts, from India; and there landed several missionaries, who departed at once for Boston to report their arrival to the Missionary Board, leaving their belongings at the Lafayette Hotel. There they attracted the attention of a custom-house clerk, who, noting the presence of a cask, suspected an evasion of duty, and reported the matter to General Miller, the collector of customs. That official at once ordered baggage and cask to be sent to the custom-house for examination, and requested that the missionaries would give him a call as soon as they returned to Salem. The suspicious cask was taken into the custom-house yard, the bung knocked out, a proof-glass inserted to find out what kind of liquor was inside, in order to fix the duty on it. They all

tasted—collector, deputy-collector, naval officer, inspector, clerk, and a tribe of hangers-on. They drank it neat, they drank it with water, with sugar, with biscuits, with cheese, but could not agree what kind of liquor it was. Bets were made; and it was finally agreed to leave the knotty question to be decided by two absent inspectors—Captain Bill L—— and Captain Steve R——. At last they came. They tasted. Captain L—— said he would stake his reputation that it was old London Dock brandy, vowing 'he had not tasted such liquor since General Crowningshield launched Cleopatra's barge in 1818.' Captain R—— declined 'to put a name to it;' he said it had a flavour different from any liquor with which he was acquainted.

The next day the missionaries arrived at the custom-house, to have their baggage passed, all save the cask of liquor. 'That must pay duty,' said the General. 'Would they inform him what spirit the cask contained?' The amused missionaries complied by telling him that when they left India they brought with them a pet orang-outang, which, dying after thirty days' experience of sea-life, had been put in a cask of rum for preservation. An explanation accounting for the peculiar flavour that had puzzled so many experienced tasters.

THE WELCOME GUEST.

A REMARKABLE FACT.

A PIGEON is not generally looked upon as a romantic bird, nor does it often exhibit an indifference to its fate when in the presence of its natural enemy—the cat; but such a thing *has* happened, and in so extraordinary a way as to induce the author of this paper—who was himself a witness of the scene—to make such a fact known as widely as possible.

It was the winter of 1863—the Christmas time when the genial Thackeray was found dead in his bed—that a wedding in which the writer took a principal part, was about to take place in St John's Church, Waterloo Road, London. On the eve of this event, the family were surprised by a strange, fluttering noise at the parlour window; and on proceeding to ascertain the cause, it was discovered that a pigeon had entered the room. It was a fine bird, and did not seem at all frightened by the number of strange faces that were gazing upon it. Suddenly it walked from the apartment, and hopped down the kitchen stairs, where, with the utmost *sag-froid*, it passed by the favourite old black cat, and proceeded to establish itself upon the kitchen mantel-piece.

In addition to the cat, there were children present, and the cook was busily engaged in preparing for the morrow's bridal feast. But the strange visitor paid no heed to either cook or children; and more astonishing still, the cat did not make any attempt to resent the intrusion. The children were, of course, delighted, and suggested that 'the poor thing was hungry;' and the next instant all kinds of delicacies were brought forth and placed before the welcome guest. It eagerly partook of them, and after an hour or two had passed away, it got so used to the inmates of the house that it actually ate out of their hands.

On the following morning—the wedding-morn—the pigeon was missed; and on seeking for it, it

was discovered standing on the steps of the door leading to the yard. In the yard itself there were three strange cats watching every movement of the bird, and evidently seeking an opportunity to pounce upon it. Here was an awkward dilemma, for though everybody was taking an interest in the wedding preparations, all were anxious that the unbidden guest should not be done to death in the midst of the universal joy and on the very day itself. But just as the chance of the poor bird's escape was becoming an impossibility in the eyes of the wedding-guests, the difficulty was solved in an unexpected and thoroughly novel manner. As the cats in question were posing themselves for the death-spring, the feline favourite of the household suddenly darted forth from the kitchen window and dispersed the enemy, who flew howling over the wall into the churchyard. The rescued guest then returned to its accustomed place in the kitchen, where it remained for several days after the wedding, and disappeared on the morning when the bride's mother, who had come from Portugal to be present at her daughter's marriage, also took *her* departure. No trace of the bird was ever found afterwards, nor did it ever revisit the scene from that day to this.

It was suggested at the time by a believer in the doctrine of transmigration, that the bird was really the spirit of the mother of the bridegroom, who had died in the same house about two years previously; but without going so far as this, we may observe that it was a very remarkable and noteworthy occurrence; while it should be stated with reference to the above-mentioned theory, and as a curious fact, that the mother of the bridegroom, when on her death-bed, had actually expressed her regret that she should not live to see his marriage, and had caused a room to be cleaned out and prepared for the reception of a bride, who had not then been definitively chosen!

The following lines were written on the wedding-morn:

THE WELCOME GUEST.

Hail, messenger of peace and love!
Unbidden guest, most welcome thou,
Who com'st from regions far above
To seal our marriage vow.

The form thou bearest is Divine,
The chosen medium of *His* will,
Who turned the water into wine,
And bade the seas be still.

Thrice welcome on our wedding-morn,
O sweetest harbinger of peace!
May joy within our hearts be born,
And concord never cease.

Sweet dove! we take thee for a sign,
An indication bright and sure,
That Heaven our souls doth now entwine,
And that the union shall endure.

Nearly sixteen years have passed away since this incident took place, and the wide ocean separates some of those who were present on the occasion. The little sketch may remind them of as strange a visitor as ever blessed a wedding with its presence.

JUDGE BATHGATE'S EXPERIENCES OF NEW ZEALAND.

SECOND ARTICLE.

IN our previous sketch, little was said of the mode of acquiring lands in New Zealand. This being a matter of importance to intending emigrants, we shall go into some specific details for their guidance. In his lectures, Judge Bathgate proceeds to say that to the inestimable blessings of a fertile soil and a healthful climate, the settler can add the benefit of a simple land-law, altogether free from the intricacies and technicalities with which the feudal system and the skill of lawyers and conveyancers have loaded titles to heritable property in England. All the public land in the colony was originally acquired by purchase from the Maoris, except that which was the property of the rebel tribes in the North Island, and confiscated at the conclusion of the war, partially to compensate for its cost. The lands in the hands of the government are termed the waste lands of the Crown. They are under the general administration of one of the Ministers, designated the Secretary of Crown Lands, and the local administration of Commissioners of Crown Lands, one of whom acts along with a Board in each of the ten land districts into which the colony is divided.

There are three classes of land—namely, Town Land, Suburban Land, and Rural Land. The first two classes must be sold by public auction, the upset price of the town land not being less than L.30 an acre, and the suburban land not being less than L.3 per acre. The town sections are usually each a quarter of an acre in extent. Competition for corner sections or others favourably situated, is sometimes very keen, and frequently L.50 for a good section is realised. Good suburban land will fetch at auction from L.5 to L.30 an acre. Suburban sections are generally ten acres in extent. The upset price of land varies in each provincial district. In Canterbury there has always been free selection at forty shillings per acre. All

good agricultural land there has been picked up long ago. In Taranaki, land might be selected in blocks specially set apart for that purpose, at twenty shillings per acre for bush land, and forty shillings per acre for open land. In other districts, twenty shillings an acre used to be the price; but nowhere now, where land is open for selection, can land according to the Crown Lands Act (1877) be bought from the government at a less price than L.2 per acre. In such districts, however, land of any agricultural value previously proclaimed open for selection has been years ago taken up. There are still, however, many fine blocks yet to be sold.

In practice, the Land Boards now almost invariably dispose of the lands by public auction, and they fix the upset price, which by statute shall not be less than L.1 per acre, with due regard to the situation and quality of the land, and also to the fact that the value of all land has been enhanced by the construction of the public railways. It therefore happens that when first-class land is offered for sale, there is always a keen competition, and from L.3 to L.10 an acre, and sometimes more, is given, according to position value, and other circumstances. In Auckland, blocks of land are occasionally set apart for occupation on the homestead system, under which a family of four persons may secure a farm of 200 acres, subject to continuous residence and certain conditions as to cultivation for five years.

In Otago and elsewhere, blocks of land are proclaimed from time to time open for sale on deferred payments. The price is L.3 per acre, payable in ten years by half-yearly instalments, without interest. Good sections are sure to have more applications than one made for them, and the consequence is, that the land is put up to auction, the bidding being limited to the applicants. In this way the upset price is sometimes materially increased. Indeed it may be said that the cheap prices for land current in early times are altogether past. But it may be added that present prices are by no means commensurate with the productive value of the land when in the

hands of those who have means and skill to work it properly.

The only other mode of acquiring land is by purchase from private owners, many of whom having acquired their land at a nominal rate in past years, are willing to dispose of their farms at current prices, and realise their profit. Some owners of large tracts of country selected in early days, are finding it to their advantage to subdivide their estates into small farms and sell them. There have been numerous transactions where prices varying from L.5 to L.30 an acre have been recently paid for sections of land. It must not be imagined that these prices have attained to their maximum.

Judge Bathgate says very truly that in every prosperous country, land, of whatever kind, is always increasing in value. New Zealand has been no exception to this rule. In many instances, land in the cities has acquired a fabulous value. Sixteen thousand pounds have been refused for a quarter of an acre in Dunedin, which cost thirty years ago L.12, 10s. Similar values prevail in Christchurch and Wellington. In some parts of the latter city they are even exceeded. These prices are not fanciful. As a rule, whenever land is all taken up, then the value rises with the demand, which constantly increases in a young and progressive country. Although high prices have been paid for urban land, sometimes as much as L.200 for the foot of frontage, there is no reason to believe that the maximum has been attained. First-class agricultural land, as that of New Zealand is proved to be, fenced and improved, and conveniently situated, must be regarded as low in price estimated at L.20 an acre. L.3 per acre per annum of clear profit from the proper cultivation of such land is under the average. We are informed of an instance of a settler purchasing 200 acres improved land at L.15 an acre, and clearing his whole purchase price from his first crop. But taking the low average mentioned, it is highly improbable that good land will remain at its present value. As society progresses in population and wealth, and as new branches of industry develop and prosper, so will the value of land steadily increase. As has been well observed, land is the natural deposit bank into which all the savings of the community gravitate. Every improvement of a public nature in the way of harbours, roads, and railways, goes to add to its value without effort on the part of the owner. There is every reason to expect that land in New Zealand will touch a far higher price than has yet been dreamt of. There is a speciality in the land which ought not to be overlooked—the area is limited in extent. There is no boundless back country such as exists in the neighbouring colonies or in North America. No part of New Zealand is above 100 miles from the sea-board, in the Middle Island 75; and when the Crown shall have parted with the last acre of its waste lands,

then the value of freehold throughout the colony will rise with a bound, to an amount to which it is difficult to assign a limit.

A number of particulars are presented explaining methods of buying lands from public companies, by paying instalments annually over a period of ten to twenty years. It is stated that those who acquire land in this manner often do well, which we do not dispute. We only suggest as a precaution, that the purchase of land by postponed payments is very much in the nature of a mortgage, and to be avoided if at all possible. The commendable method of acquisition in New Zealand, as elsewhere, is to go into the market with ready-money, and to buy only as far as means at disposal will admit. On no account should land be bought with borrowed money. Interest on loans is high in the colony, and it may with truth be averred that borrowing is only the beginning of ruin. Some sad cases of disaster from this cause could, we understand, be offered. A small capital judiciously laid out will go farther in the colony than in the home country. It is not necessary for a farmer to keep up a large staff of men and horses. Farmers, if they please, can get their operations carried on by contract. Many of the settlers lay themselves out for this business; which resembles that prevailing in some of the vast arable plains in the United States, where contractors with a large staff of men, horses, and machinery will undertake to plough, sow, and harrow the land, reap and thrash the crop, send it to market, and pay the amount less the expenses incurred. This is what may be called doing business on a great scale. It is the latest development of economic science in connection with agriculture, and meanwhile leaves the costly old-fashioned practices immeasurably behind.

We ascertain from the lectures before us that almost all the early settlers in New Zealand have done well, notwithstanding the difficulties that had to be encountered. He cites as an example the case of a shepherd from Roxburghshire, who arrived with his wife and eight children in 1860. Finding that the best land about Dunedin had been taken up, he visited Southland. There he bought sixty acres at L.2 per acre. Struggling manfully, he made money by selling his butter and eggs at the high prices current in consequence of the rush of the gold-miners. He was not one of your thriftless wretches who spend as fast as they make. Soon, out of his savings, he bought an additional sixty acres at L.2, 5s. per acre, and continued to make purchases though lands were rising in price. He and his sons, who are settled near him, now possess 2628 acres of freehold, worth at least L.25,000. This man is a type of many of the Scotch settlers. The last time he was heard of he had thirty cows, and was famed as a breeder of stock. His beef and mutton command the highest prices in the market. Had he remained in Scotland, he would still have been living in a mean cottage among the hills as a servant to a store-

farmer. By his enterprise and industry, along with professional skill, he is now a wealthy landed gentleman, with sons rising to distinction.

Judge Bathgate speaks hopefully of New Zealand as a field of emigration for farm-servants and others willing to work for wages. There is a steady demand for the able-bodied men and women who wish to get on in the world. He says it has been gratifying to notice the prosperous career of many of these immigrants, who had arrived friendless; to see how soon their children were able to add materially to the family income; and to observe how often it happened that those who began colonial life as hired servants speedily became masters, giving employment to others. Ordinary labouring-men work eight hours a day, have plenty of the best to eat, plenty to do, with an agreeable sprinkling of holidays, and receive eight shillings a day as wages. A single man can board luxuriously for eighteen shillings a week; and if he be sober, and industrious, and blessed with health, he cannot fail in a short time to realise a few hundred pounds. One of the leading grocers in Dunedin, a man of substance, came out to the colony a few years ago, and immediately engaged himself as a farm-servant at L.50 yearly with board. Having a good stock of clothes, his whole expenditure during his first year amounted to one shilling. This left him L.49, 19s. as a nest-egg; continuing to save, he improved his circumstances, and now with a flourishing business is independent.

Female domestic servants, if well trained, get high wages, from L.30 to L.50 a year, and with great ease can save a heap of money. The cook in our household, says Mr Bathgate, went home to Scotland as a saloon passenger last year to see her mother, and the old haunts which she treasured in remembrance. In one respect the long journey was not successful. She arrived in November, and never saw the land near the home of her youth. It was covered with snow. Her patience being exhausted, she returned to New Zealand, after spending three months in Britain, intensely dissatisfied with her native climate. Her trip must have cost her L.100, but she thought nothing of it. Young women of this class may get married if they please; but colonial marriages are sometimes too hastily entered into. There is one comfort for any young woman who has the misfortune to be deserted by a profligate husband. Protected by law, she has no difficulty in gaining a respectable livelihood by her own exertions. A sense of this renders wives more independent than a similar class at home.

All circumstances combine to render New Zealand a suitable field for the exertions of capitalists large and small, besides those who depend on hand-labour. The younger sons of landed gentlemen who are unable or unwilling to undergo competitive examinations for employment under the Crown, and who might dislike following any mercantile pursuit in the home country, would here find scope for their latent energies, provided they laid aside notions of gentility, and went earnestly to work as assistants in the first place to store-farmers. The young men of this class, we understand, who emigrate to the colony, too frequently break down from self-indulgent habits, and have to be shipped home to their friends. Others among them, however, shew an

extreme anxiety to overcome early difficulties, and consequently, as they deserve, rise to fortune. We have been told of one of these youths, who, though brought up in elegant style at home, gave himself up thoroughly to his duties as a stock-keeper in the colony, and is esteemed for his good behaviour. As an evidence that he accommodated himself to his new position, he one day stated to an old acquaintance whom he had fallen in with, that 'he could now kill a sheep.' That young fellow will inevitably get on. We do not doubt that in less than twenty years hence he will be an esteemed and wealthy man. How much more creditable is his behaviour than that of the pampered young ne'er-do-weels who lounge away existence, sponging on parents, perhaps consuming their means at the bars of restaurants, or at those still more dangerous resorts, the gambling-tables in club-houses!

Enough has been said to shew that New Zealand has much to recommend it as a field for emigration for different classes. The way is long; but a few weeks more or less is not of much consequence when the change has to be for life. There is, at all events, the pleasing prospect of landing in a country which in many respects resembles that which is left, and which to a fine climate enjoys the blessings of a peaceful government under the beneficent sway of Queen Victoria. Wherefore, emigration in this case seems only like a transfer from one part of the home country to another. When the work of Judge Bathgate, now preparing for publication, shall be issued at no distant date, much additional information may be obtained on the subject we have but imperfectly treated. Notice of the publication will be given in these pages.

W. C.

P.S.—Since the foregoing was written, we have seen by the newspapers that in several parts of England, attention has begun to be drawn towards New Zealand as a fitting field for emigration by farmers suffering from the agricultural depression that now unfortunately afflicts the country. We copy the following from the *Times* (October 21) as exemplifying this newly awakened interest: 'A correspondent writes: "A remarkable movement is in progress in Lincolnshire. Over five hundred farmers and landowners, who occupy or own in the aggregate considerably more than one hundred thousand acres, have signed a requisition to two gentlemen, requesting them to proceed to New Zealand, in order that, after personal inspection, they may report upon the colony as a field for emigration for farmers possessed of means and capitalists, with special reference to such as have had experience of farming in Lincolnshire. The gentlemen whose services have thus been requested are Mr Grant, of Healing, near Grimsby, and Mr Foster, from the neighbourhood of Louth. Both are practical farmers. They sail to-morrow in the steamship *Norfolk* for Melbourne, and propose to spend several months in New Zealand, returning to England in the course of next summer. Should their report be favourable, there will probably be a considerable exodus of emigrants of a superior class to New Zealand, especially from Lincolnshire."

The only remark we would make on the above, is to say that it is almost a pity the farmers of Lincolnshire should have incurred the expense,

trouble, and delay incidental to sending a mission of inquiry to New Zealand. Here is Judge Bathgate just returned on a leave of absence, after an experience of sixteen years in the colony, full of the information required, which he is not only able but anxious to impart. To save time, the best thing any body of farmers or others contemplating emigration can do, is at once to communicate with Judge Bathgate. His present address is 'Peebles.' W. C.

THE OUBLIETTE.

PART III.—THREE YEARS AFTER.

A FAIR morning sun was shining on Touraine. It glittered in myriad sparkles upon the dancing Loire, brightened the distant turrets of Sainte Marguerite, and lit up even the sombre walls of Plessis les Tours. In the breeze there was freshness, and the mingled scent of roses and hawthorn, as it swept across the green fields where the lark carolled over its nest. There were merry voices everywhere. The market-women, in their picturesque attire, chattered gaily with the soldiers lounging at the gates of Plessis, which now stood open all day long. It seemed that a something of gloom and depression was lifted from the place—a something of terror gone. And the change discernible in Plessis was the change which had resuscitated France throughout its length and breadth. Crushed so helplessly under the iron heel of a tyrant, it rose in renewed beauty at the beck of a gentler master; for Louis XI. was gone to his rest with all his sins upon his head, and his son Charles reigned in his stead.

One of the first acts of the new king had been to open the prison doors of those captives whom Louis had left alive, and to seek by kindly compensation to atone for the cruelties practised by his predecessor. He invited back also those nobles who by timely flight had put the sea between them and their oppressor. And in a short time the court at Paris was gay again with the beauty and chivalry of old France.

On this sunshiny morning, a man standing upon the ramparts of Plessis, leaned against a corbel and gazed listlessly, sometimes at the distant river with its barges, sometimes at the pigeons circling fantastically over his head, their snowy plumage shewing clear and white against the intense blue sky. He is worn-looking, stern, and gray. A man aged apparently more by some terrible sorrow than by years, a man to whom smiles are an infrequent visitor. We have seen him before. It is M. Lamarque, still governor of Plessis les Tours. And few mention his name without a sigh of condolence and pity. His people stand aside respectfully when he passes, the father of lost Léonie Lamarque!

It is becoming an old story now—how that one summer evening three years ago she rode away with her attendant Silvain to visit the convent of Sainte Marguerite, and from that ride returned no more. She had never reached the convent. The eyes that watched her cross the drawbridge were the last that had beheld her. Days, weeks, months went by, and brought no clue to her strange disappearance. Léonie, Haroun the well-known black horse, Silvain, all vanished as if

obliterated from the face of the earth, and left no sign.

Frantic at his loss, the father appealed for aid to Louis, who condescending to interest himself for his faithful servant, caused strict inquiry to be made; but without avail. And then a rumour crept about—as rumours will, one knows not how—that Gustave Chapellier, ordered with his troop to a distant part of the country, had not gone alone, but that with him went a veiled and masked woman; further, that that woman was Léonie Lamarque. We know at least that was not true; and Gustave, summoned to Paris, denied sorrowfully and indignantly the vile assertion. The story of his honourable love, related by himself to Louis, convinced even that sceptical monarch that Gustave was evidently innocent.

The blow struck down the unhappy mother. Loss, mystery, and disgrace did speedy work; and the governor has been wifeless and childless for two years when we meet him again. He thinks of all this as he stands there, a lonely weary man, and the look of stern suffering deepens on his face. So absorbed is he in these reflections, that he does not notice the arrival of a horseman by the Paris road. Summoned before long to receive a visitor, M. Lamarque descends slowly the winding stair, and enters with his now habitual gravity the strangers' lodge. A fair young man was there, stately and noble-looking, at the sight of whose deep blue eyes a cold thrill shot to the heart of M. Lamarque; and at the sound of whose gay voice, the governor stepped back as though he would have fled, his cheeks paling and his breath deserting him.

'Welcome, old friend, at last!' cried the stranger, coming forward eagerly, and extending both hands in cordial fashion.

Taking no heed of the proffered hands, M. Lamarque still gazed—a man turned to stone.

'Speak to me, commandant, for the love of all the saints; don't stand and glare at me like that, as if I were a ghost.'

A ghost indeed! to the horror-stricken governor.

'Ah,' continued the other, 'I suppose that I don't deserve to be noticed after my ingratitude in remaining silent so long; but come, forgive and forget my sins. I have come back, you see; won't you say a word of kindly greeting to your old friend, Claude d'Estrelles?'

'But,' gasped at last the governor, 'you are dead, M. le Marquis; you must be dead!'

'Dead! not I, faith of a gentleman! Although certainly I should have been very speedily had I remained much longer in that cheerful hole of yours in the northern tower. But thanks to love and luck, that demon of a Louis was outwitted, as of course you very soon found out. Come, M. Lamarque,' continued the Marquis, laughing, 'sit down and have it all out fairly. First, you shall give me the history of my decease, which you so oddly insist upon; and then I'll give you the history of my escape, which I certainly insist upon.'

The governor sank mechanically into a chair, passing his hand across his brow, as though to clear away the mist from his brain and eyes. But it was all real. There before him sat the smiling Claude d'Estrelles, twisting his sunny moustache.

'Come, commandant, begin!'

'It was upon the 10th of June, M. le Marquis, three years ago'—

'I have reason to remember it,' broke in the young man joyfully—'the day of my deliverance.'

The governor heaved a sigh of perplexity. 'On that day I received a special envoy from the king, bearing your death-warrant'—

'Kind attention on his part, very!'

'You were decreed to die that night by—the oubliette. I had no choice but to obey, terrible as obedience was. Grieving for you more than you can comprehend, M. le Marquis, I visited you that evening, and quietly opening your cell-door, I gave you a farewell look and prayer, for you were sleeping peacefully, and never stirred.'

Claude smiles oddly to himself.

'At midnight the emissaries of Louis did their work, and it was sure. They heard the crash of the falling pallet upon which you lay, and'—

'Apparently the days of miracles are not past,' says Claude, laughing; 'for here I am sure enough, and none the worse! Remarkable; isn't it?'

M. Lamarque does not know what to make of this young man, who, risen up from the dead, treats with so much levity a story which, as regards the governor himself, has helped to whiten his hair and sadden his life.

'You astonish and bewilder me, Monsieur le Marquis. Your jesting words are incomprehensible to me.'

'Ah! forgive me,' says the Marquis; 'my own heart is lighter to-day than it has been for many a weary month. I have come back to confess my sins and be absolved. My greatest creditor has already remitted my debt; you can't wonder that with a glad face I seek her father and ask him to receive and welcome me. For it is against her'—his voice changes—'her, that I have sinned so grievously by my thoughtless silence and neglect.'

One allusion in Claude's speech has altered the expression of M. Lamarque's countenance from amazement to distress. What has this man to say of Léonie, the very thought of whom evokes a miserable memory in her father's heart, and sets the flood-tide of his troubles free? The governor sighs wearily, and leaning his head upon his hands, says: 'Tell me what you will, Monsieur le Marquis, and pardon my strange manner to you. I am confused. There are things you do not know. Pray speak. I listen.'

And so Claude, in his gay bright fashion, tells the story of his escape.

It was, after all, like many great strokes of genius, simple enough. The greatest difficulty was surmounted when Léonie discovered the secret way. Ladies in 1482 wore a curious riding costume, a sort of cloak or domino with a hood, and a black velvet mask. The mask had become an institution among the noble dames of Paris, ostensibly to preserve their complexions from the sun, and their faces from the rude looks of too inquisitive gallants, but in reality because it lent itself so conveniently to the service of intrigue. Like other fashions, it travelled speedily into the provinces, and soon became the recognised appendage of a lady either on horseback or in a litter.

Therefore, disguised in Léonie's apparel, with shorn locks, and attended by the faithful Silvain, Claude left Plessis les Tours on that memorable 10th of June. Still weak from his long imprison-

ment, how his heart beat with feverish pulsations as he mounted Haroun, knowing that at any moment he might be stopped and spoken to, even by the governor himself! There was a trifling delay at the great gate, a delay made on purpose by the clever Silvain to avert suspicion, but a delay which made the Marquis's heart throb more wildly, and his pale face flush beneath his hood.

Discovered!—now! when life and freedom were so near! At the thought, Claude's hand had clutched more fiercely the bridle-rein, while his teeth closed upon his white lip until it bled. But the drawbridge was lowered; they passed quietly over, and once out of sight, the young man thanked passionately God and his love.

Later on, Léonie, after placing in Claude's cell a lay-figure so arranged in his poor garb as to cheat a cursory inspection, passed out of Plessis in the attire of Mother Angélique, trusting to (what really happened) the impunity afforded by the well-known dress. No one dreamed of staying or interfering with her. It never entered the porter's mind to ask himself the question when she had come in, or indeed, to think anything about it. 'It was Mother Angélique. *Voilà tout!* A simple matter.' And as it was absolutely necessary for the success of Claude's venture that Léonie should disappear, she threw herself upon the kindly mercy of the Abbess of Sainte Marguerite, who kept the secret faithfully, even for her own sake. It was an ugly affair to meddle with any of Louis XI.'s little arrangements.

So free of Plessis' grim walls, by devious paths the Marquis and Silvain travelled on, avoiding all encounters with other people, resting by day in the thick woods, and riding cautiously by night, until they reached at length the Château d'Estrelles, where its lord was received as one risen from the dead. The Lady Rénée had long ago taken refuge in a convent, to escape the persecutions of Louis and Tristran, but not as a professed inmate, and the brother and sister soon met again. Faithful servants kept their secret. Naturally, there was no search made for the Marquis, believed by those in power to be buried in the silent vaults of Plessis; and soon gold smoothed their way to England, where they awaited better days. New friends gathered round him, new pleasures opened before him. Youth and wealth find small leisure for sad retrospection, and so for a while the memory of past horrors grew dim in the excitement of other interests that surrounded him. But with all this, as time passed on, the Marquis of Clair-marais became a restless man. Fair faces smiled on him and they delighted him not. The witchery of bright eyes faded beside the steady gleam of those which haunted him always now—the far-away Léonie Lamarque, become at last, and surely, the one woman in the world to him!

When she came, a heavenly vision, into his wretched dungeon, proffering life and liberty, Claude caught at them as a drowning man catches naturally at a plank, unheeding for the moment that the salvation of himself may mean the destruction of another. But to do him justice in this matter, he imagined really that her risk was nothing. Louis would forgive a woman, the only child of his faithful commandant, to whom no blame could attach. And in the convent of Sainte Marguerite, Léonie would find a safe and happy refuge until events took a more favourable

turn. Yes, that was it. The evil of the day tided safely over, Claude's mind was not of that calibre which takes undue thought for the morrow.

Why then, should he latterly dream of her so often, and wake with a heavy heart, whose craving nothing satisfied?

And now we have to state a fact, unpleasant but true, a fact that Monsieur d'Estrelles would have been ashamed and sorry to confess lightly, even to himself.

In this game of hearts between the Marquis and the governor's daughter, the stakes, alas! had not been equal; and the heaviest—more the pity—lay with Léonie. A Frenchman of his time, readier with his jest and sword than steadfast in his easily excited fancies, Claude was more to Léonie than Léonie as yet had been to Claude.

The love-making, commenced in sheer thoughtlessness, to while away the dreary hours of confinement in Plessis, had deepened, it is true, into a nobler feeling on his part when the girl's faithful devotion won a way to him and opened his prison doors. But even then it was little beyond a grateful sentiment, a passing enthusiasm of admiration, that fell miserably short of the deep-rooted, abiding love which alone is worthy of its name. As regarded such, Claude's soul was still in outer darkness and asleep, when he went forth a free man again.

It was only distance and memory and remorse that awoke it at last in its real honest strength, when everything else, tried in the balance, was found wanting. He took his resolve.

As his acknowledged, honoured wife, her loving devotion, which he recalled with shame, should be rewarded, and his thoughtless ingratitude atoned for. Charles was king in his father's stead. Claude and Renée were safe, and they returned to their ancient home. The Marquis speedily found that Mademoiselle Lamarque's mysterious disappearance had never yet been accounted for; she was still lost to the world of Plessis, and then he knew where to look for her.

When the death of Louis XI. cleared the social atmosphere of France, one might have expected that Léonie would have returned to her father's house, and so far elucidated matters; but in truth she dared not. Convents are pretty much *au courant* with all that passes in the outer world, and Mademoiselle Lamarque knew that her flight had brought her mother to the grave, and darkened her father's life with a sorrow that made him a man of note upon the tongues of gossips. How, if she shewed herself now, would he be likely to receive this erring daughter, the girl who for her lover had not scrupled to sacrifice her nearest ones? No; Léonie Lamarque had made her choice, obeying the command that bids a woman leave 'father and mother;' and grieving alone, she 'dreed her weird' in Sainte Marguerite's, looking for him who, month after month so wearily expected, came not.

In utter silence the governor of Plessis heard Claude's disclosures; and when the latter ceased to speak, M. Lamarque raised his head slowly, and looking straight before him, with a curiously set and pale face, said: 'And Mademoiselle Lamarque—where then is she?' His voice had a strange, far-away sound, as though, while his words addressed

themselves to the listener beside him, his soul itself held commune with distant things, away beyond the world around him. For answer, Claude d'Estrelles rose quickly with an expression upon his face that would have been called 'nervous' in anybody but himself, and opened the door.

Two figures come in. One of them, in a nun's garb, is the Abbess of Sainte Marguerite. She draws forward a white-faced, trembling woman, who, silent also, sinks down at the feet of M. Lamarque. But speechless, she looks at him, and stretches out her hands appealingly.

With a start and gesture of wrathful aversion, the governor wards her off. There is neither mercy nor pity in his eyes.

'Who is this?' he asks, stepping back. 'What means this farce?'

She shivers at the unrelenting voice.

'Oh! my father, it is your daughter—your Léonie!'

'I have no daughter! She left me to sorrow and disgrace three years ago. Since then, I have seen her mother die, calling vainly for her lost child—the child that never answered—that made no sign!—Is it you, Madame?—and his voice took a fiercely scornful ring—'that tell me you are my daughter?—Go!'

The Marquis stoops quickly and raises the shrinking figure, holding it lovingly in his arms while he whispers words of courage, and tries to soothe the frightened girl. The Abbess puts her hand entreatingly upon M. Lamarque.

'My son! be merciful! Our Léonie has sinned, as many a loving woman has sinned before her. I do not extenuate her fault. I cannot wonder at your righteous anger; but her own heart has been for many long sorrowful days, and will be, its own punishment. Forgive a stricken, not a hardened woman. Leave vengeance to whom vengeance belongs!'

'Marquis de Clair-malais!'

Startled by the tone, Claude looks up boldly. M. Lamarque does not approach or turn his eyes upon Léonie, but he fronts Claude with a stern, white face.

'Have I understood aright? if you are willing to marry this—one, named Léonie Lamarque?'

'Willing!' The Marquis's voice takes a tone of passionate tenderness. 'So willing, that I hope to atone with my whole life for the sorrows of my poor love here. Heaven forgive me for being the cause of them!'

'That is well.'

'It is only your consent we ask now, Monsieur Lamarque.'

'It is easily given.—I pray you, ladies, and you, sir, to excuse me for a brief period. Have the goodness to await me here.'

And walking with erected head but lagging steps, like a man in a trance, the governor goes out. Léonie leans on Claude's shoulder; her tears fall drearily. The sweet-faced Abbess tells her beads rapidly, and thanks our Blessed Lady that she has quitted a world where such terrible sorrows and passions have sway. The Marquis, to tell the truth, looks rather savage. He had not exactly reckoned upon the present performance. Things do not appear to be arranging themselves pleasantly. He gnaws his moustache.

The governor re-enters. Still haughty and cold, he requests them to follow him, and he leads the

way to the old chapel. It is partly filled with a crowd of retainers, new servants who have come in with the new régime, strangers who know not Léonie Lamarque; and they stare curiously at the chief actors in this strange and sudden wedding to which they are bidden as witnesses. The altar is ablaze with light. Léonie remembers with a curious wonder her midnight search and what she found there three years ago, a finding of which the result is—this! Awaiting them is a white-haired priest, who gazes pityingly upon the pale bride whom the abbess leads to him. It seems but a wild weird dream after all; an unreal phantasm to the three personages of our drama, when the words are spoken which alter so strangely the lives of those, long separated, who meet again to-day in Plessis les Tours, and Father Laurent, with solemn exhortation, joins the hands of Claude d'Estrelles and Léonie Lamarque.

It is not a very long ceremony; marriages and divorces were equally short affairs in those convenient days, and when it is over, all the assistants, previously warned, depart.

The Abbess sinks upon her knees before the high-altar. There has been no sign of any relenting in the father who, still and cold, gave just now his once-loved child into the keeping of the man for whom she has suffered so much. As a stranger doing a duty, he has done it. There are some wounds that rouse the gentlest nature into cruel retaliation, and the governor's heart has been stabbed by the hand he loved best.

Following a sign that he makes them, Claude and Léonie find themselves standing with him before a monumental stone, let into the wall. One glance is enough. Léonie turns to Claude, covering her face. M. Lamarque speaks with chilling distinctness: 'Marquis de Clair-marais, take your wife. What such a daughter may be as a wife, I know not. That is your affair, not mine. A memory of the dead rises up between me and this woman.—Madame d'Estrelles, your duty awaits you.—Sir, I pray you to excuse me; I would be alone.'

He turns away and sinks wearily upon a *prie-dieu* before the tomb.

'Claude, Claude! He casts me off. Ah! heaven help me!'

It is a bitter cry, and the Marquis's arm tightens round his sad young wife as he tries to lead her away. 'Come!' he says.

There is imperiousness as well as love in the tone. He is all she has now. She obeys him with lingering and faltering steps.

They reach the door. She stops, and turns to look again at the solitary bowed figure that leans upon the chair. Its desolation and forlornness strike to her heart.

'No, Claude; not like this!—not like this!'

She speaks in a fierce whisper, and breaks from him. In another moment she is on her knees beside that silent figure.

'Oh, my father—bless your child!'

Even so came the voice of Esau upon the ears of Isaac. He starts and shivers at the sound.

He pulls out his hand to wave her away. She holds it fast—so fast that he cannot withdraw, or prevent her lips from resting upon it.

Claude has drawn near.

The Abbess stays her prayer to watch; then watching, prays again.

'See here, my father. You loved my mother. Was there never a time when, if terrible need had been, you would have done for her what I did for my love? She sees all things clearly now—she, whom I have most sinned against; and as I was dear to her on earth, she has forgiven me now. I know it! oh, I know it! My father, will you be less merciful?—O mother! speak to his heart for me!'

The pitiful, despairing voice rings out wildly through the chapel. There is a moment's silence. Then M. Lamarque stands up. There are tears too upon his sunken cheeks. And he looks at the memorial stone as he stretches out his hands over the head of his trembling daughter.

'For the sake of my dead love, and as she would bid me do—I forgive and bless her child, the child who bears her name.—Claude, Léonie, go in peace!'

And so those who had 'come out of great tribulation,' sailed into a pleasant haven at last. And this romance of Plessis les Tours was told over and over again to generation after generation who stood admiringly before the picture of Léonie, sixteenth Marchioness of Clair-marais, and read beneath it that she was 'Belle dame, vertueuse, et de loyauté très-rare.' That was Claude's doing.

THE POMPEII COMMEMORATION.

'THERE has occurred this year,' writes a Naples correspondent, 'a very remarkable and interesting event at Pompeii. On the 24th August 79, the great eruption of Vesuvius destroyed the city; and eighteen hundred years afterwards, that catastrophe has been commemorated under circumstances which will make Thursday 24th September 1879 a day to be recorded and remembered. The guardianship of the ruined city is in the hands of the Italian government, who have shewn an excellent spirit in celebrating in a becoming manner an occurrence of such historic importance. Special cards of invitation were issued; and not less than twelve thousand persons availed themselves of an opportunity of not only noting the progress which has been made in excavating the ruins and bringing fresh art wonders to light, but of hearing an authentic account of what has been done at the works from the lips of the Engineer Director.

'Those privileged persons found themselves on that day not only on the site of the city, disinterred from its silent tomb, but walking about its streets and exploring its houses, vivid with almost undimmed hues. "In its Forum were to be seen, when the city was first discovered (1750 A.D.), the half-finished columns as left by the workmen's hands; in its gardens the sacrificial tripod; in its halls the chest of treasure; in its baths the strigil; in its theatres the counters of admission; in its saloons the furniture and the lamp; in its triclinia the fragments of the last feast; in its cubicula the perfumes and the rouge of faded beauty; and everywhere the bones and skeletons of those who once moved the springs of that minute yet gorgeous machine of luxury and of life." Thus wrote Bulwer in his *Last Days of Pompeii*.

"I never was more struck with the value of these words than I was on the day of the commemoration. Like the American artist who, when asked what guide he took with him to Scotland, replied, "Sir Walter Scott;" so I took Bulwer with me to Pompeii.

"But to return to Thursday the 24th September. Shortly before ten o'clock in the morning, the roads leading to Pompeii were crowded with carriages; and the trains from Naples and elsewhere brought thousands. The principal entrance was by the Hotel Diomede, and thence by the gate at the western end of the Via Marina to the Basilica, where a tribune was erected, from which the Chief Engineer read an address, in the presence of men distinguished in position, in art, and science. There was to be seen the illustrious Commendatore Fiorelli, who for several years has superintended in a regular and methodical manner the excavations, and to whom we are indebted for the institution of a Museum and Library at Pompeii; for the dwelling-house erected for the students, which is entirely maintained at the cost of the government; and for several other practical and valuable administrative improvements. The great size of the Basilica, an oblong building two hundred and twenty feet long and eighty-two feet broad, prevented the learned Engineer from being distinctly heard; but the address was printed, and a few copies distributed. Then came forward Signor Quintino Quanciale, *Academix Socius*; and Signor Antonio Mirabilli, also *Academix Socius*, Professor of Latin, who in sonorous voices recited verses in Latin applicable to the occasion.

"As soon as the verses had been recited, the Basilica was emptied of the vast numbers which occupied it during the proceedings, and the Engineer accompanied by other Pompeian officials, proceeded to escort a group of the visitors through the Forum, through the Strada di Augustali to the Region and Island where the new excavations have been made.

"The city is divided by Fiorelli into nine Regions or quarters, which are subdivided into Islands, or what will be better understood by a block of houses bounded by four streets. Region IX., Insula V. and VI., was then examined, disclosing the pillars of a house only inferior in size to the house of the 'Faun,' the dimensions of which are two hundred and sixty-two feet long by one hundred and twenty-five feet broad. Near here, close up against the superincumbent mass of Vesuvian debris, were disclosed various objects—bronzes; a burnished metal mirror little used, and which will probably turn out to be the largest in the Pompeian collection; some skulls; three skeletons. There were also exposed to view some beans, hemp-seed—perhaps to feed the little bird of which the skeleton was found. Here too were discovered a drinking-fountain, a graceful candelabrum, and on a marble pillar a head of Silenus; three pitchers, a bell, a mould for a pie, many rings, handles of bronze vases, feet of furniture, pedestals for statues in bronze and stone, &c. With the examination of these objects ended the official programme of the day; and

then came a rush for luncheon in a large tent or pavilion, erected on the plateau over the last-made excavations.

"From this point the general view of Pompeii is very fine. The whole city of ruins is at one's feet, extending from the House of Diomede, at the north-western angle, near the Herculaneum gate, to the Porta di Nola on the east, and to the Amphitheatre on the south. While the giant Vesuvius—author of all the ruin—on the north, towers over the whole, sending forth by day and by night smoke and flame. "Now brightly blue as the most azure depth of a southern sky, now of a livid and snake-like green, darting restlessly to and fro as the folds of an enormous serpent—now of a lurid and intolerable crimson, gushing forth through the columns of smoke far and wide, and lighting up the whole city from arch to arch, then suddenly dying into a sickly paleness, like the ghost of its own life."

"As it was impossible," writes the Naples correspondent of the *Standard*, "to be at all the points of interest, ten new excavations being carried on simultaneously, I went, being advised by those most competent to judge, to Section No. 9, and there, in a small division parallel to that already numbered five, the curiosity of the spectators was soon richly rewarded. Almost with the first strokes of pick and spade, used, by the way, as only Pompeian diggers know how, there came to light a quantity of household objects, chiefly of those light and beautiful forms and delicate workmanship to be found in even the humblest Pompeian dwellings. A detailed list of the various articles in the order in which they were found fills six closely written pages of my note-book. There were bronze amphora lamps, brooches, bracelets, delicate vases, and one very large and elegant bronze candlestick, earthen vessels of various forms, fragments of glass, amongst which were the pieces of a lovely little glass vase of the most brilliant blue colour. The belongings of the upper and under stories of this little house were curiously mingled together, objects of mere ornament being mixed up with kitchen utensils. Then came some large tiles and fragments of a large beam of wood, shewing that the roof had been crushed in on the lower stories. It is judged to have been the shop of a seedsman, for besides some bronze scales and weights, several large heaps of small beans, grain, and hemp-seeds came to light, with portions of wooden casks and canvas sacks in which they had been kept. A piece of sacking which I had in my hand, still tied with a bit of string, was wonderfully perfect, although quite black. In one corner were the bones of some small animal, probably some household pet; and stuck against the wall was a skeleton of a little bird, its breast pressed against the mortar, where it had clung in its fright and bewilderment. Several human skeletons were found in other parts of the city, and one very perfect piece of Mosaic pavement. One feature of the scene not to be passed over was the intense interest displayed by the plebeian portion of the crowd—an eagerness which sorely tried the almost too great patience and gentleness of the officials, and causing loss of time from too close crowding; but the applause bestowed when the custodians held up any object to public view, and the shouts of 'Bravo!' when it happened to be anything of real classic beauty,

were rather striking, in view of all that has been said of the Italians not feeling or caring for their own antiquities."

SINGULAR DISCOVERIES.

Given inclination to undertake, and leisure to perform the task, any one who would hunt up records of unexpected finds, remarkable in their nature, or by reason of the circumstances under which they were made, might easily fill a goodly sized volume with the results of their researches. Pending such a compilation, we have made note of some things not generally known in the way of singular finds, and hope a little chat anent them will prove acceptable to our readers.

An interesting discovery, at least from an archaeological point of view, was strangely brought about several years ago. Two men were tried before the Court of Assizes of the Basses-Pyrénées for a series of burglaries and highway robberies. The evidence against them was irresistible; but none of the plunder could be traced, until one of them, Rivas, gave a hint towards solving the mystery, which sent a commissary of police to a cavern in one of the mountains. To scale the precipitous sides of the mountain was no easy task; but the officer persevered, and was rewarded by finding an enormous quantity of stolen property. The commissary having shewn that the cavern was accessible, some savants soon found their way there, and exploring it thoroughly, brought to light the remains of animals of enormous size, flint hatchets, ornamental pottery, and a number of Roman medals of the third century. The advocate of Rivas tried to turn this to account, and asked the jury to look upon his client as a pioneer of science; but they did not see the force of the argument, and he and his fellow in crime received their deserts.

Londoners do not look to stumble upon strange reptiles on their way to business, or be startled by rare birds taking the air in the streets. Yet within the last twenty years a snake was found 'at large' in Fleet Street among some woodwork; a chameleon was rescued from death at the wheels of a Holborn omnibus; and a kingfisher captured in the courtyard of the British Museum—snake, chameleon, and kingfisher being as much out of their latitude as the poor pig that fell into the saving hands of the crew of a Lowestoft lugger, while battling bravely with the waves *six miles from land*.

A shark, eleven feet in length, which was caught off the Scotch coast was found to contain a whole ling, a man's bonnet, sundry remnants of fish, and a soda-water bottle corked and sealed. The bottle was quickly smashed, and a paper, signed Annette Gordon, was found. It ran thus: 'On board the *Beautiful Star*, Sunday, 1st September 1872. We have crossed the line, and all's well. Last night the captain's lady had a pretty little boy.

Heaven bless the little stranger,
Rocked on the cradle of the deep;
Save it, Lord, from every danger,
The angels bright their watch will keep.
Oh, gently soothe its tender years,
And so allay a parent's fears—
A father's love, a mother's joy;
May all that's good attend their boy.'

How long a time it took for that communication to come to land, we are unable to say. Messages committed to Neptune's charge are apt to be long delayed. The *London* was lost in the Bay of Biscay in January 1866; it was not till near the close of the following year that a bottle was picked up in Exmouth harbour, containing a tailor's bill, on the back of which was written: 'Lost in the ship *London*, FRANCIS DAY. Advertise to my friends that I have three thousand pounds in the London and Westminster Bank.' Welcome as the information may have been to those concerned, there was probably greater gratitude felt for that conveyed in the slip of paper inclosed in a bottle cast ashore on the coast of Wexford: 'The finder of this is to tell ELIZABETH GRANTON, of Ashton Grange, on the borders of London, E.C., that the secret of her birth will be found behind the picture of the Earl of Warwick in the drawing-room; and receive the blessing of a dying man.'

The Bank of England has had no end of valuables committed to its keeping. The vaults of its establishment hold mouldering chests, deposited there for safety's sake, and apparently forgotten by their owners. In 1873 one fell to pieces from sheer rottenness, exposing to sight a quantity of massive plate and a bundle of yellow papers. The latter proved to be a collection of love-letters of the period of the Restoration, which the directors were enabled to restore to the lineal descendant of the original owner!

In 1875 a tin box was fished out of the Seine containing more than five hundred letters, addressed to divers persons in Paris. The box—set aloft miles above Paris—had been hermetically sealed, and was furnished with little metal sails, that it might catch the current of the river at every point; but it had failed to achieve a successful voyage, and lain at the river's bottom for years with its freight of letters for the besieged Parisians, some of whom, however, had the gratification of receiving them five years after date.

The betrothed of a young watchmaker, living at Prescott, had to wait even longer for one of his love-letters. He posted it at Coventry in August 1867; but the fair one did not receive it. Luckily, no mischief arose between the pair in consequence; the course of true love ran smoothly for once, and they were soon afterwards married and settled, taking up their abode in the street in which the lady had lived before marriage. One day in 1878 a worn, crumpled letter came to her. It was the lost love-letter. It had slipped down a niche in a mail-van, and been discovered upon the condemnation and breaking up of that vehicle.

At Highgate, near London, stands a public-house, from the window of which a skeleton cat challenges the notice of passers-by. In its teeth it holds a skeleton rat, caught no one knows how long ago. Just as we see them now, cat and rat were taken from the chimney, when the house was undergoing alteration.—A more grisly chimney-find fell to some workmen a few years since in the old house in the High Street of Hull notable as the birthplace of Wilberforce the slave emancipator, for the skeleton they disturbed was a human one. A banking business was at one time carried on in the house, so the bones were set down to belong to a thief who, hiding in the chimney, either preliminary to committing felony,

or to escape pursuit after committing it, had been suffocated.

Burglars and robbers do sometimes get into tight places, and fall a sacrifice to their evil ways. Nunez the Spanish banker had a strong-room in his bank at Lerida which was never entered unless some heavy payment in gold had to be made. To this there were originally two keys, but one of them mysteriously disappeared. One day it became necessary for the cashier to visit the reserve safe, and he was not a little startled at finding that there was a key already in the lock. He hurried to Nunez with the news; and the banker himself opened the strong-room door. Inside lay the body of a man—the corpse of a discharged bank servant. He had stolen the missing key, and availed himself of an opportunity to rifle the safe; but too eager perhaps to finger the coin, had forgotten that the door fastened with a spring, and letting it close behind him, had wrought his own punishment.

In January 1878 the soda-laden ship *Irvine* arrived in the Thames from Peru, and discharged her cargo at Rotherhithe. Imbedded in the soda was found the well-preserved body of a woman, supposed—we know not on what evidence—to be one of the victims of an earthquake occurring many centuries ago.—There was not such utter uncertainty respecting a wooden coffin containing a guano effigy of a man, discovered in 1845, some seventeen feet from the top of the guano mound of Ichaboe; for although the coffin and its contents crumbled to dust after an hour's exposure to the air, the finders had managed to decipher all that remained of a rude inscription—namely 'bermann' and '689;' and to come to the conclusion that the remains were those of the carpenter or *tombermann* of a Dutch sealing-ship, who had departed this life in 1689.

The child of a Dutch farmer at the Cape was wont to spend his idle hours on the river-bank searching for pretty pebbles. One of the youngster's acquisitions attracted his mother's notice as something out of the common, and she shewed it to a neighbour curious in such things. He would have bought it; but Mrs Jacobs ridiculed the idea, and made him a present of it. He kept it a little while, and then as readily parted with it to somebody no wiser than himself, who passed it on to a friend having sufficient curiosity to post it in an ordinary unregistered letter to Dr Alherstone, a mineralogist in Graham's Town. The expert declared the boy's pretty pebble to be a veritable diamond; as such it was exhibited in the Paris Exhibition of 1867, and purchased by an English gentleman for five hundred pounds.

Some five or six years ago, a young man was traversing the mountains, cañons, and valleys of Esmeralda County, Nevada, prospecting for gold and silver. As he looked down on the valley of Teel's Marsh, he saw a vast bed of white sand or something like it, and was tempted to descend and examine it. He found the place to be the bed of a dry lagoon, five miles in length, and about half as wide; and what he had taken for sand proved to be a soft clay-like deposit, in which he sank ankle-deep as he cautiously walked over it. Filling his pockets with the curious stuff, he mounted his horse again, and rode to his home in Columbus. There an assayer pronounced the contents of his pockets the finest sample of crude

borax he had ever seen. The astonished prospector—one of the large family of Smiths—lost no time in making formal claim to his find; and that obtained, he and his brother went to work with tanks, boilers, crystallisers, and all necessary appliances, and are at the present writing, as the masters of an immense establishment, driving a very profitable trade, one likely to be as permanent as profitable, since the deposit of borax in Teel's Marsh reproduces itself every two or three years, so that Smith Brothers have no fear of the supply failing.

Wonderful reports have come of late from Arizona and Colorado of rich mining 'strikes.' Mr Chilsen, the owner of the most valuable claim in the Globe District of Arizona, thus relates the story of its discovery: 'I was travelling alone over the Sierras in the fall of 1876, and had reached Pinal County on my way to the Globe District, where I hoped to find a ledge that would give better paying ore than the one I had recently abandoned. Being pretty near worn out with my three weeks' profitless prospecting, I was jogging quietly along on the back of an old jack, looking out for a quiet gully where I could camp for the night out of the reach of road-agents and redskins. Seeing a likely spot on the other side of a low ridge of rock I was then coasting, I made for it, when my mule stumbled over a blind cleft, and threw me head-first to the ground. My shoulder hit a loose bit of rock, and that saved my head; although it was some time before I could put myself together again. When I was able to pick myself up, I looked at the rock I had lit on, with a critical eye, and it was not long before I found it to be a solid lump of as pure silver as is to be seen on the outside of an assay office. It was a long brown mass, which shaled off when cut with my pocket-knife, and was considerably more than I could lift, although I can handle a two-hundred-pound bag of ore without any difficulty. It lay in a kind of split in the rock, and this split was the outcrop of a silver ledge, respecting which I concluded that I could not better my luck if I travelled till doomsday. I went to work, and set off at once as big a claim as the laws of the Territory would admit. Following the streak for some way, I came across several crevices of a like character to the first, all full of shreds of the same shaly stuff, known to miners as horn-silver. Every ounce of it was worth as much as a Mexican dollar. I slept there for the night, and early next morning covered up all traces till I could get force enough to hold my own. In fifteen days my two brothers joined me, and then we set about developing. The first lot of ore we got out I packed on the backs of seven mules, and started for San Francisco, which I reached in two months, and sold out for a clear gain of eight thousand dollars. Since then my brothers and one hand have taken out over sixty thousand dollars in cash; and I reckon the mine is worth a clear million just as it stands, and will sell for twice as much as soon as the railway now building reaches the district.'

A needy Australian had reason to be thankful for his want of pence. One evening, a tired, footsore traveller halted at a Bush inn in Bendigo, hoping to rest there for the night; but unable to satisfy the landlord of his ability to pay for the accommodation, that worthy referred him to airier

lodgings in the Bush behind the inn, to which he was fain to betake himself. Early astir the next morning, the wayworn man loafed aimlessly about, until something met his experienced eye that set him prospecting in earnest; the something being an auriferous reef; which upon his working it paid him so well that he was able in a very short time to buy out the churlish publican. After a while he disposed of a portion of his interest in the property to a Company, designated after him Wilson and Company, which within two months of the purchase returned two large dividends to its shareholders; and it still holds its place as one of the best-paying mining Companies in the district.

THE MACE.

THE mace, it appears, was originally a weapon of war; its recognition as a symbol of power and authority being of much later date. Kings, judges, ministers, and persons in official positions in most countries evince a liking for the mace in this character; and it is deemed fitting that the symbol should be a fine specimen of metal-work or carving or both. The sword of state and the mace carried before a great personage may be taken, the one as an emblem of judicial punishment, the other of governmental authority—the two functions combined in the same individual.

The serjeant at mace, or serjeant of mace, equivalent to mace-bearer, has for ages been a functionary invested with what may be called the ceremonial part of authority both in the House of Commons and elsewhere. The mace at one period, and in some parts of England, was a necessary adjunct or preliminary to the due execution of legal and judicial processes. For the royal maces we must go to the Tower of London; where, in the almost priceless collection known as the *regalia*, we find emblems of royalty in great profusion. Five crowns—one with the finest pearl in the world—the orb, the ampula or golden eagle for containing the anointing oil at the coronation, the curtana or sword of mercy, the sword spiritual and the sword temporal, bracelets or armillæ, the royal spurs, and—added during the present reign—the far-famed Koh-i-noor diamond, the ‘mountain of light.’ Lastly, there are the maces, sceptres, or rods. These comprise the royal sceptre with the cross, thirty-three inches in length, richly adorned with precious stones; St Edward’s staff, made of gold, four and a half feet in length, and weighing ninety pounds—with an orb at the top said to contain a fragment of the true cross; the sceptre of the dove, or rod of equity, having a dove with outspread wings above the orb; Queen Victoria’s sceptre, with a richly gemmed cross; the ivory sceptre of Queen Maria d’Este (wife of James II.), surmounted by a dove of white onyx; and the sceptre of Queen Mary, wife of William III.

Who has not seen the Lord Mayor’s Show, and the glittering mace which Mr Mace-bearer displays at one of the windows of the Lord Mayor’s gorgeously ponderous state coach? This mace is a fine specimen of goldsmith’s work of the fifteenth century—some parts much older. It is supposed to be the same which Stow wrote about in his *Annals* when describing Queen Elizabeth’s proces-

sion to St Paul’s in 1588, to return thanks for the destruction of the Spanish Armada. In modern times, whenever the sovereign enters the City of London in anything like state, the Lord Mayor presents the City sword but not the sceptre. The same functionary has for many centuries borne the sceptre at the Coronations.

The Lord Mayor’s mace or sceptre, just mentioned as a symbol of civic authority, is a staff about eighteen inches in length, composed in great part of crystal, cut with lozenge or diamond-shaped facets, and encircled with gold bands. The channeling is filled with thin fillets of gold; and the golden divisions are studded at intervals with eight rows of large seed-pearls. The upper part is composed of four crosses and an equal number of fleurs-de-lis, and studded with three rubies, three sapphires, and six very large seed-pearls arranged in groups. The fleurs-de-lis are supposed to have been added in the time of the Plantagenets.

Details of a very curious kind have been collected respecting the maces and sceptres belonging to the corporate towns in various parts of the kingdom: information obtained in the first instance from the Reports of the Municipal Corporations Commissioners, with later corrections and additions from other sources.

The city of Canterbury, it appears, has a mace and a sword of state displayed on certain ceremonial occasions. The sword was presented to the city by King James I. The original charter granted by Henry VI. empowered the mayor to appoint serjeants at mace to bear the maces before His Worship—for there were more maces than one.

The corporation of the city of York claim to possess a silver mace, a large sword of state, and another state sword of smaller dimensions. The mighty sword, made so far back as the year 1439, and presented to the city by the father of the queen of Richard II., is borne in ceremonial state on Easter Day, Christmas Day, and a few other occasions; but can only be carried without fatigue by a somewhat powerful man. The smaller sword, dated 1545, a gift from the Lord Mayor of London in that year, is more frequently used. The Cap of Maintenance—as it is called—worn by the sword-bearer on special occasions, is so dignified a symbol of civic authority that he dolls it to no one whatever, and may even wear it during Divine service in the minster or elsewhere.

The old city of Winchester has a record in the corporate books to the effect that, in the second year of the reign of Queen Elizabeth, a riot took place in reference to a disputed claim to the ownership of Padisham Marsh. One rioter named White was fined by Sir John Guildford for inciting the rest, and for ‘contempt of the mayor and his officer bearing the mace;’ and another was fined twenty nobles ‘towards the remaking or making great of a new mace’—thus indirectly implying that though the wisdom might not necessarily be in the wig, the virtual embodiment of authority is in the mace.

Southampton has the honour of possessing two large gold maces and one of smaller dimensions; one of these is as old as the time of Henry VIII. It used to be the custom, when the mayor’s lady went to church on state occasions, to bear one of these maces before her; she wore a scarlet gown

as a token of distinction. Southampton has also, among its relics of the past, a two-handed sword five feet in length—a formidable weapon which no puny mortal could wield; and an oar, which is borne before the mayor as a token of the Admiralty rights of that borough.

Hastings does not boast, so far as we are aware, of a corporate mace; but it possesses a monster punch-bowl, having a capacity of sixteen quarts. Associated with this bowl is a story to the effect that the barons of the Cinque Ports—that is, the members of parliament for Hastings, &c.—have the privilege of bearing the canopy over the sovereign at the coronation. When they had performed this function at the coronation of George II. and his queen-consort, they claimed the silver staves which had upheld the canopy; and this perquisite was acceded to. They, however, were not selfish in the matter, for they presented the staves to the corporation of Hastings. Banqueting rather than royal reminiscences was in favour with the borough authorities; they caused the staves to be melted down, and the silver used to make the Brodingnagian punch-bowl.

Glastonbury possesses, or possessed a few years ago, a staff as a substitute for a mace; it was of silver, and could claim an existence of more than three centuries. This staff was borne before the warden or chief functionary of the corporation.

The city of Carlisle is especially favoured in the possession of a silver mace, a sword of state, a silver tankard, and a silver loving-cup, all the gift of the Earl of Carlisle in the time of Queen Anne.

At Folkstone in the olden time, on the election of a mayor, the townsmen were summoned to the churchyard by the blowing of a burghmote horn, before proceeding to church to hear Divine service. The outgoing mayor and jurats then gathered around the cross in the churchyard; the former delivered an address, and directed the townsmen to go into the chancel and elect a new mayor. This tells of very early times indeed, as does the name of the town itself—Folkstone. If the borough possesses a mace, it must have been of much later introduction.

Edinburgh has a handsome gilt silver mace, surmounted by a crown, and bearing national emblems, with the date 1617. As this was the year in which James I. returned to pay a visit to his Scottish subjects, this mace may be presumed to have been prepared for the occasion along with other civic paraphernalia still in use.

More than forty other towns, in addition to those above named, are known to possess or to have at one time possessed, a mace as the symbol of corporate authority. For instance, Dunwich, now a decayed old town in Suffolk, had at one time a small silver mace shaped like a thick bolt or arrow. Norwich has a sword of state and three maces; one of which was presented to the city by Queen Elizabeth, and another by Sir Robert Walpole. The university cities of Oxford and Cambridge possess silver-gilt maces, besides smaller maces for the town serjeants. Bristol is said to be favoured with the ample allowance of nine maces and four swords; one of the latter was presented to the city as far back as the time of Henry VI. High-Wycombe had a silver-gilt rod or staff for the mayor to carry, while a mace was borne before him. Chard, although without a mace, possesses a corporate sword, two muskets,

and six helmets—rather warlike for so quiet a place. Loughor, in South Wales, which now thinks more about coal than of anything else, once had two old maces, made of wood, and ornamented; these were afterwards supplanted by four maces made of brass.

It may be remarked before concluding, that the maces of corporate bodies have sometimes been made to do double duty—as symbols of authority, and as drinking-cups on great occasions. According to the fashioning of the upper part, the cup becomes in some instances a tankard, in others a bowl. The top of the mace was made to screw on or fit into the lower part; and occasionally the lower part itself was made hollow, to serve as an additional reservoir of choice beverage. On great festive occasions a mace of such a kind, filled with wine, was handed round to the principal guests; it was then refilled with spiced ale, which the serjeants at mace and other minor officials quaffed off with great relish. Among other towns thus provided may be mentioned the borough of Bridgenorth, which had two maces of silver-gilt, supported by twisted columns about twenty-four inches in length; when unscrewed, the upper part of each became a drinking-cup of about one quart liquid capacity. These symbols of civic dignity and banqueting were fabricated about two centuries ago.

MY NEIGHBOUR'S WIFE.

IN TWO CHAPTERS.—CHAPTER I.

'HAROLD!' There is something in my mother's voice that warns me she is about to broach an unpleasant topic of conversation; for she pronounces my name in a timid, deprecating manner, suggestive of—What? I inwardly run over a list of disagreeables peculiar to her sex—servants, new bonnets, match-making, and, last but by no means least, house-cleaning.

'Yes, mother,' I reply, as cheerfully as the circumstances will permit.

'What very settled weather we're having for April.'

I thought so—it is house-cleaning!

'It won't last, though,' is my unfeeling rejoinder.

'Don't you think so, dear? I am sorry for that. I thought it would be such an excellent opportunity for having the house cleaned and perhaps re-papered.'

'Oh! pray don't put yourself to the trouble of having it re-papered on my account, mother.'

'No, my dear. It is very considerate of you to wish to save me trouble; but Lady Haughton was advising me to have our rooms done like hers, on the "high-art" system.'

'Bother Lady Haughton!' I mentally ejaculate.

I pretty well guessed she was at the bottom of the mischief. It is she who has been giving my mother lessons in 'high-art.' Of course it is! Before she came into the neighbourhood, my revered parent was as 'art-less' as a new-born babe; now she is transformed into a true daughter of Eve.

I am an only son, and my mother is a widow. Before the advent of the aforesaid titled lady, a

happier pair than we two could not be found under the sun; but since that ill-starred day when we were honoured by an 'At Home,' to which in an evil hour we responded, my domestic felicity has come to an end. Incessant visits are interchanged between the two ladies, who have conceived that violent liking for each other, incomprehensible to man, but a part and parcel of woman's composition. If Lady Haughton is not at our house, my mother is at hers. (N.B.—It is more frequently the former, for the rent-roll of the House of Haughton is far from long.) Then 'dear Mrs Gilchrist's little dinners are so admirably arranged,' and 'dear Mrs Gilchrist's carriage is so roomy, and rides so easily;' in short, all 'dear Mrs Gilchrist's' possessions are so superior to 'dear Lady Haughton's,' that my misguided relative is actuated by the profoundest pity to lend every portable article in the house—including our French cook—to her less fortunate friend, and to work my favourite chestnuts almost to death. Can you wonder then, that my feelings towards this disturber of our peace are the reverse of amiable, and that my assumed cheerfulness suddenly vanishes at the mention of her name? In fact I am afraid I look decidedly cross as I push back my chair from the table, and answer: 'Well then, mother, since you deem it a positive necessity to turn the house out-of-windows, I shall run down to the sea-side for a week or two. I can't, and won't endure being hunted from one room to another to please Lady Haughton, and you know the abominable odour of paint always knocks me up.'

'Where do you think of going, dear?' asks my mother composedly.

'Oh, I don't know!' is my ungracious reply; and lighting a cigar, I stroll into the garden to meditate on a bachelor's woes; for had my mother been my wife, she would have been bound to obey me, not I her.

Hitherto I have entertained a profound horror of matrimony, founded upon the experience of sundry male friends—well, we'll say *blessed* with partners of the Haughton school; but since breakfast my ideas on that subject have been undergoing a rapid change. A wife may be controlled; a mother, filial respect forbids to be. Fortunately—or unfortunately, whichever the case may be—I am by no means susceptible to the tender passion; in fact I pride myself upon my heart being perfectly adamant. When I hear that my voice is 'almost equal to Sims Reeves's;' that I waltz 'divinely;' that I am the best hand at croquet, badminton, lawn-tennis, &c. 'for miles round;' and when informed by my easily gulled parent that '*that nice girl Miss So-and-so thinks Mr Gilchrist the handsomest man she ever saw*,' I set it all down to the fact that I am heir-presumptive to a baronetcy, and in many other respects what is termed a 'good catch.' But putting aside that fact, the last assertion would alone have destroyed any Miss So-and-so's chance of ever becoming Lady Gilchrist; the fib was too palpable. I am not ugly; but I certainly am not handsome. You shall judge for yourself; then I shall not be accused of injustice towards 'Miss So-and-so.' As far as I can see I have a tolerably well-shaped head, adorned with closely cropped black hair, a healthy brick-dust complexion, a 'composite or mixed' nose, a pair of rather decent brown eyes—at least they would be if one were not short-sighted—a heavy

black moustache, and a herculean frame of full six feet four inches high—these complete my charms; so I think I am justified in saying I am not ugly, but certainly not unduly handsome. Of course my mother, blind where my unworthy self is concerned, thinks me quite equal to the Apollo Belvidere; indeed I am not quite certain if she were called upon to give her candid opinion as to the relative merits of that gentleman's physique and mine, whether her verdict would not be in my favour.

Under the soothing influence of a couple of choice Havanas—I am an inveterate smoker, perhaps that partly accounts for my being a bachelor at the somewhat mature age of five-and-thirty—my ill-humour vanishes; and I begin to think of my proposed exile with a certain degree of satisfaction. It is a long time before I can make up my mind where to go, but at last I decide on Brighton. So when I meet my mother at luncheon, I wear an air of such touching resignation to my fate, that it causes the dear old soul to propose putting off the house-cleaning for a few weeks, until the weather really is settled; but of this I will not hear, and announce my intention of starting on the morrow, wet or fine.

She takes me at my word, for that same evening I find my portmanteau packed and labelled, my rugs strapped up, and even my pocket-flask filled. So amid maternal warnings relative to damp sheets, wet feet, and staying out in the night-air, I depart en route for Brighton.

Arrived at London Bridge Station, I purchase the inevitable yellow-backed volume without which no British traveller is complete, ensconce myself in a comfortable first-class smoking-carriage, settle my body on one seat, my extremities on another, tuck my railway rugs tightly round me, light a cigar, and open my book. No one seems inclined to disturb my peace; there are very few passengers, so most of them can follow my example and have a compartment to themselves. As one after another peers in at the window and passes by, I begin to congratulate myself on my good fortune, and to give myself up to a lazy enjoyment of my exceptionally fine cigar. But I am doomed to disappointment.

'Here you are, sir! Be quick.'

Before I have time to displace the extremities, the door is thrown open, two individuals shot in; a bang, a whistle, and we are off.

'How lucky we were to catch it, Charlie,' some one pants.

'Yes, indeed,' assents Charlie.

When I have had time to collect my scattered senses and my railway rugs, I steal a covert glance at the intruders. Charlie turns out to be a good-looking young fellow, attired like myself in a travelling ulster and tweed cap. And Charlie's—wife! Yes, I decide that at the first glance, more's the pity!—Charlie's wife is—is perfection. I have seen many beautiful women in my five-and-thirty years, but none to compare with Charlie's wife. I never was a good hand at describing female beauty; and as to dress—well, I refer you to my mother, and she is a partial judge. To describe Charlie's wife—or rather to faintly make the attempt—she is petite and, gracefully, prettily 'plump,' a perfect little Hebe, in short; and I should judge her to be from eighteen to twenty—not more, perhaps less. Her face is perfect in outline, small

and oval; the features so piquante that one forgets to notice they are not quite regular, and that the nose is decidedly tip-tilted, while the mouth is just a thought too large. But the dewy red lips that disclose a set of the prettiest little pearls it is possible to imagine, more than compensate for that very trifling defect, if defect you deem it—I do not. Her eyes are 'darkly, deeply, beautifully blue,' fringed with long curling lashes, two or three shades darker than her pale auburn hair, and her complexion is dazzlingly fair. Coy little dimples lurk in all manner of unlooked-for corners in that bewitching face, whose greatest charm is its ever varying expression and constant animation. Allowing for my unpardonable stupidity in the matters of the toilet, suffice it to say Charlie's wife is dressed in navy-blue serge—I know the name of that material because I wear it myself—which fits her to perfection, and her hat is a saucy little felt deer-stalker to match. O Charlie, you are a lucky fellow! I feel in great danger of breaking the second clause of the tenth commandment!

What an awful nuisance they must think me. I hate being *de trop*; but it is not my fault; I am quite as much to be pitied as they are; so once more I bury myself in the pages of the yellow-backed volume, which like many others of its kind promises fair at first, but eventually proves a snare and a delusion. Of course my cigar was, alas! long ago doomed and cast to the winds.

For some time she keeps up a merry chatter, from which I principally gather that this is her first visit to Brighton, and that she prefers the country to London. There is none of the confidential whispering that I had dreaded, and very little love-making. Certainly I once saw her pull his long blonde moustache when she thought I was not looking, but beyond that their behaviour is most decorous. Somehow—confirmed bachelor as I am—I fancy that if I were in Charlie's place, I should not be quite so well-behaved as he is. How could any man resist those roguish blue eyes? How can Charlie? Most assuredly this is no honeymoon trip, for presently Mrs Charlie subsides into a yellow-backed volume like mine, and Mr Charlie into a nap; and who ever heard of a bridegroom indulging in forty winks at the very commencement of the tour? Instead of falling into the arms of Morpheus, I, for one, should prefer falling into the arms of my wife—that is, supposing her to be such another as Charlie's!

Evidently Mrs Charlie's book proves a snare and a delusion, for after glancing over the first few pages, she closes it with an air of impatience, and quitting her husband's side, she seats herself opposite him, and looks out of the window. By this time I have ceased pretending to peruse my yellow-backed friend, and am to all appearance engaged in contemplating the beauties of nature as seen through Charlie's window, not mine.

Meanwhile Charlie slumbers on, as tranquilly as though there were no such person as Mrs Charlie in existence, let alone sitting right before him in all her bewildering beauty. He does not even stir when she gives him a playful tap across his knuckles with her book and calls him softly by his name. With a comical little *moue*, she gazes from the window; and I begin to feel less

uneasy about violating the tenth commandment than I did at first. Such an ungallant fellow as this does not deserve such a dear little wife! I fervently wish there were no such thing as *les convenances* to be studied; then I could get into conversation with my slumbering companion's wife, which might cause her to feel less lonely than she does now. Whether intensity of desire brings the fulfilment of the wish, I know not; but this I do know, that when I see her take hold of the heavy leathern strap to let down the window, I am not at all slow in availing myself of the opportunity kind Fate throws in my way.

'Allow me!' I ejaculate, starting to my feet with an alacrity that seldom characterises my movements. (However much I may admire animation in others, I must confess to being rather addicted to taking it easy myself.)

'Thank you' answers Charlie's wife, with a graceful little bow, and a smile that causes me to bungle most awkwardly with the strap.

'I am afraid you will find the wind rather cold,' I say, going back not to my former seat, but to the one next hers.

'O no! I think not. I cannot have too much air,' she returns with another of those dangerous smiles. 'I always think these first-class carriages are a great mistake; they are so close and ill-ventilated. For my part, I should infinitely prefer travelling third.'

'Indeed!' I laugh. The idea of Charlie's dainty little wife travelling third class is too absurd! 'I fancy you would soon alter your opinion, if you were to try the experiment.'

'Why?' she demands, lifting her pretty dark brows in disbelief.

'I'm afraid you wouldn't find the society quite so agreeable as the ventilation,' I answer.

'Oh; but I like to study life in all its phases, not only from an opera box or in a ballroom. I always envy Dickens his insight into human nature both high and low. If I were a man, I should do just as he did, go into all sorts of places and all sorts of company,' announces Charlie's strong-minded better-half; and I don't doubt that she would.

'It would be a good thing if there were a few more young ladies as sensible as yourself,' is my stilted response.

I am rather disappointed to find that bewitching Mrs Charlie is somewhat strong-minded. I like a 'womanly woman,' and have a lively horror of strong-minded females.

Does my fair companion divine my thoughts, that she hastily adds: 'You will set me down as a thorough "blue;" but I really don't deserve that epithet. For one thing, I am no believer in woman's rights.'

'Not even to the extent of allowing the window to remain open, just because it will be certain to give your husband an awful toothache, sitting as he is, right in the draught,' I slyly put in.

Charlie's wife gives me a quick, searching glance, then breaks into a little silvery laugh. 'Oh! poor boy. How thoughtless of me! Close it, by all means—if you will.'

'Shall I open the other? Perhaps you will find the smell of stale tobacco too much for you?' I hypocritically remark.

To tell the truth, I am dying for a cigar, and have been ransacking my brains for the last half-

hour as to the most delicate manner of finding out whether my fair friend objects to smoking. I don't like to put the question point-blank.

'O no; I don't mind it in the least; in fact I rather like it. You see I am used to it, for Charlie smokes from morning till night.'

'So do I,' I laughingly admit.

'And you have refrained from indulging in the pernicious weed all this time, in case its scent might annoy me?' she archly queries.

'Well—yes, I know a great many ladies object to smoking,' I reply, pulling out my cigar-case, and extracting a choice Manilla. Then, opening my vesta-box, I find that I have already used the last match. 'What a nuisance!' I exclaim; 'I have omitted to supply myself with lights!'

'I can give you some,' laughs my neighbour's wife. 'Charlie is in the habit of forgetting his, so I generally carry a box;' and she passes me a natty little Russian leather fusee-case.

'What a boon it must be to have a wife to look after one's comforts!' I reply, casting to the winds any lingering scruples, and breaking the tenth commandment outright.

Charlie does not wake until we get into that abomination the tunnel; then he suddenly opens his eyes, starts up, gives me a suspicious glance, and his wife a reproving one, for we are in the midst of an animated discussion of Thackeray's *Vanity Fair* (Charlie's wife is wonderfully well read), and are laughing and joking as merrily as though we were old friends. We come to a dead stop, and my companion goes back to her former seat. Her jealous lord maintains a dignified silence all the rest of the journey, scarcely deigning to look at my side of the carriage; and finding her attempts at conversation only meet with monosyllabic replies, the poor little thing resumes her discarded book, and never once lifts her eyes from its pages until the train steams into Brighton Station. As she is leaving the carriage, she turns and gives me a little bow; then Charlie hurries her and the portmanteau into a fly, and they are driven away.

'Poor little woman; what a life she must have of it!' I mutter. 'That fellow is the greatest tyrant I ever came across, and yet she seems so fond of him! "Charlie dear," indeed! I'd "Charlie dear" him!' And savagely flinging away nearly half a Manilla, I too hail a fly, and am rattled off to *The Bedford* in no very enviable frame of mind.

CLAMEUR DE HA! RO!

CLAMEUR de Ha! Ro! What is it? What does it mean? We venture to assert that few generally well-informed readers know anything about the time-honoured but eccentric ceremonial which in our Channel Islands goes by this name. Originating in a feeling of romantic fealty to a powerful Duke of Normandy, a customary usage there when William I. brought these pretty and fertile isles as a part of his duchy to the English crown, strangely enough the formality is still as fresh and as vigorous, and serving almost the same purpose as it did under the régime of the Norman Conqueror. Why this tenacious vitality, is a question we are not disposed to enter into; suffice

it to say that it often forms a sensational prelude to proceedings at common-law, and that this is briefly its story.

An encroachment is being made on a worthy Channel islander's landed property. It matters not the exact shape or form the infringement is taking; a path may be in progress of cutting across his field, a wall or a building may be in course of erection on his domain, anything in short may be going on by which the rights of *meum* and *tuum* are forgotten or set at defiance. Possibly enough, but by no means imperatively necessary for the action which is to follow, the transgressing one has been warned of his tripping, but has failed to give heed to the admonition; and either through obstinacy or mistaken identity, continues to push on the encroachment. So the wronged landholder at once determines to bring 'Duke Rollo' to his aid, and by the infallible appeal to this long defunct but still omnipotent chieftain—by Clameur de Ha! Ro! in fact—to stop all further derelictions.

A disbelieving outsider of these islands might, naturally enough, run away with the impression that a writ emanating from a legal functionary would be a more effectual 'stopper' than any calling upon a dead and gone Prince; but the Guernsey or Jersey native thinks, indeed he knows, better. To him, the mandamus of the Lord-chief Justice of England, whatever authority it might carry in other matters, would not be half so summarily powerful as an appeal to Rollo. So he acts thus: He hastens to the spot where the trespass is being committed, and there, in the presence of witnesses, falling on his knees, he exclaims three times in a supplicating voice: 'Ha! Ro! Ha! Ro! Ha! Ro! à l'aide, mon Prince; on me fait tort' (To my help, Rollo; they are wronging me). Why the suppliant uses the French language, when most likely he is thoroughly conversant with English, need hardly be said; it is well known that that tongue is the official one of the land, in which all deliberations take place and all documents are written. Why too he—rather disrespectfully—abbreviates his Prince's name from Rollo to Ro, is thus explained. The 'Ha' or 'Aa' is an ejaculation, 'the cry of one suffering;' and 'Ro' stands for Raoul or Rou, by which patronymic, rather than the more modern one of Rollo, the appealed to was generally known. The *clameur* thus made, who dares to disobey it? All work being effected in the encroacher's cause must cease instantaneously, or the workman himself becomes amenable to further proceedings in common with his employer. It does cease; and it so remains suspended until the right or wrong of the case has been heard before the legal tribunal of the Royal Court, and a judgment given thereon. Then it goes without saying that if the allegation is proved, the accused is mulcted in damages and costs, and is otherwise dealt with; but if, on the other hand, the charge is set aside, the accuser pecuniarily suffers for having invoked

Rollo or Rou without good and sufficient cause. The Prince when alive was the prototype of equity, honour, and justice; his traditional might is still ready to uphold the right; but it is not to be called from the quiet of a tomb or clamoured for heedlessly; if so, it must be paid for.

There is more than one pretty tradition given of the origin of this strange practice; but the one generally accepted is, that it came into vogue somewhere about the year 930, while Rou, an ancestor of William the Conqueror, held the Dukedom of Normandy under fief to the French crown. Strange that this traditional usage should still be in use in these days of modern judicial improvement!

DOGS UNDER SURGICAL TREATMENT.

WE have a little dog, one of those beautiful creatures known as a 'King Charles,' on which it was found necessary to perform a surgical operation. With a heavy heart we took the animal, unconscious of what was to ensue, to the Royal Veterinary College, and was fearful as to what might be the suffering and its consequences. The operation occupied about a quarter of an hour, and though no doubt painful, was borne with a wonderful degree of quietness and patience. For an hour or two afterwards the patient was rather dull, but recovered his spirits, and is as lively as ever. On the remarkable degree of equanimity often demonstrated by dogs under surgical treatment, the *Lancet*, in a recent number, makes the following remarks:

'We have often been struck with astonishment while witnessing the patient submission of animals, especially dogs and horses, to surgical operations, and to the surgical dressings necessitated by them. A case in point has been brought under our notice. A fine pointer-bitch had a large hard fibrous tumour of the breast, with deep and far-reaching roots. The operation for its removal was very skilfully and effectually executed by Mr George Fleming, veterinary surgeon of the 2d Life Guards. During the operation, the animal displayed an amount of patience that would have been creditable in a human being. Even during the most painful part of the proceeding, that of inserting sutures, she never flinched. The same resignation was displayed when the time for dressing the wound came round. The patient received the surgeon with an air of preparation, and even put herself into position for being dressed. In the case of a similar operation on another dog some years ago, strong resistance was offered to the attempt to give chloroform; but the animal submitted to the surgical procedure as we have described above. Such facts admit of a partial explanation in the mental theory of pain, according to which suffering that is not anticipated and mentally apprehended is not pain in the acuter sense of the word. But we should be sorry to see this explanation carried so far as to deprive our dumb fellow-creatures of all credit for the submission they shew under surgical treatment. We would go further, and say that they are vastly more sensible than many human beings in their estimate of the medical profession, and have instinct enough to see that even when pain is inflicted on them, it is for a good and kind purpose.'

R E S T.

WHEN thou art weary of the world, and leaning
Upon My breast,
My soul will shew to thine its hidden meaning,
And thou shalt rest.
When thou art eagerly, but vainly aiming
At some far end,
Thou knowest not thy pining and 'complaining
Have pierced Thy Friend.
My presence is around thee and about thee—
Thou dost not know—
But if thou knewest, thou wouldst ne'er doubt me,
I love thee so.
Thou art a very child, and needest guiding—
Thee I will lead :
Another guide might be too quick in chiding,
Nor know thy need.

Lean on Me, child—nor faint beneath thy sighing,
With help so near :
I took upon Me all thy grief and dying
To heal thy fear.
When thou art resting in my secret dwelling,
Shadowed by Me,
Thou shalt not tire of listening—I of telling
My love for thee.
Thine eyes are bent upon each loving token
Sent by my hand ;
With these alone thy spirit would be broken
In thy fair land.
Thou art a lover of all things of beauty
In earth and space ;
Then, surely, 'twere thy pleasure and thy duty
Their source to trace.
Track the bright river of each much-prized blessing
Back to its source ;
See all the blooming growth thy foot is pressing
Along its course.
See, gathered in thy storehouse of sweet dreaming,
Each glowing thought,
Which daylight, starlight, or the moon's sweet gleaming
To thee have brought,
All real beauty which thy heart is greeting—
In this fair earth—
All music which thy charmed ear is meeting,
From Me had birth.
But this will be revealed when thou art leaning
Upon My breast.
Thy soul shall comprehend my hidden meaning—
And thou shalt rest. JANET.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice :

1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'

2d. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3d. MANUSCRIPTS should bear the author's full Christian name, surname, and address, legibly written.

4th. MS. should be written on one side of the leaf only.

5th. Poetical offerings should be accompanied by an envelope, stamped and directed.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

SOME COMMON HOUSEHOLD DANGERS.

It is a healthy characteristic of the race that in these latter days increased attention is being paid both by technical men and by unscientific persons to those conditions which tend to improve the health and physical well-being of the individual and of the nation at large.

In a recent paper we directed attention to the common dangers which threaten us in our homes, and which arise from the presence of deleterious matters in one or more of our surroundings. Mr Jabez Hogg of London has well remarked for example, that 'the almost universal use of poisonous pigments in the arts and manufactures is known to be productive of a twofold noxious influence; first, upon 'the work-people employed in their manufacture; and secondly, on a very much larger number of persons who purchase them, and who being quite ignorant of their nature, adorn and surround themselves and their homes with the elements of disease.'

Take some common cases—constantly recurring in medical practice—of illness arising from contact with arsenic, in one form or another, and we may then be able to conceive of the numberless ways wherein we may be subjected to its influence. A member of parliament suffered from a painful eruption of the feet, traced at last to some fashionable socks, which were laid aside, with the result of ending his complaint. Some Californian miners died from the effects of poisoning produced by wearing boots lined with bright green flannel, the colour in this case being 'Scheele's green,' a well-known arsenical compound. A tradesman suffered from wearing a bright maroon flannel shirt. Paper collars glazed and stiffened with sized white-lead, and containing arsenic, have produced serious illness; and the same results have followed the wearing of hats lined with material containing arsenic, and from gloves and coat sleeves similarly treated. Five or six persons in a household were rendered suddenly ill by the matter exhaled from chintz window-curtains and bed-drapery; and green

Venetian blinds have been known in hot summer weather to give off particles of arsenic with deleterious effect. The green cloth-lining of a perambulator has affected its young occupants, and the colour from the green gas-shades in a composing-room of a printing-office has produced illness among the compositors. In the kitchen, arsenic has now and then been met with, when used to impart a green hue to dishes such as blanc-mange. In one case a gentleman was poisoned by partaking of a dish innocently enough coloured by an arsenical preparation which had been mistaken by the cook for an extract of spinach. And even in the exercise of the perfumer's art, it behoves us to be on our guard against using preparations for the hair coloured green by some compound of this substance.

We thus find that arsenic is most widely diffused around us, from the facility and above all from the cheapness with which a beautiful pigment and a favourite hue can be produced through its aid. It is undoubtedly in the form of colour in wall-papers that arsenic most frequently meets us. In paper-staining, more than one compound of arsenic is used; and in the manufacture of the beautiful aniline dyes, so extensively used, arsenic is also largely employed. One notable feature of this substance, and one also which gives it a special power of affecting us to our detriment, is the remarkable ease with which it becomes volatile. It may be readily diffused in the form of gas or minute solid particles, and is thus brought into close contact with us in our homes. Green is a very pretty colour on walls, but we would say, take care of it.

Another noteworthy remark is found in the fact that dangerous wall-papers may exhibit other than the green colours which excite our suspicions as to their healthy character. Arsenic has been detected in white, red, blue, mauve, and brown wall-papers; and of late years French pigments of well-nigh every shade of colour, and largely impregnated with the substance, have been imported into England for the use of paper-stainers. Even

the 'size' used to fix the colours on the paper may be arsenical, Mr Hogg tells us; and the apparently innocent-looking distemper-colour, used for walls and ceilings, is liable to contain its quota of this veritable 'devil's dust.' French grays and whites are largely arsenical, and we have the evidence of a paper-hanger himself, that disease follows those who work among gray papers more than any other class in the trade. And what shall be thought of the morality of the proceeding, described by Miss Osborne of the Sydney Hospital, who writes that a foreman-painter and decorator stated to her that 'confectioners often come to our shop for large quantities of colours, some of them harmless enough, others poisonous enough, for colouring lollies (sweets); and the quantity of those sweets consumed by young and old in the colony is something marvellous.'

It is by no means an uncommon thing to see bakers' shops, especially in the country, painted within of a bright green colour. The dangers incidental to such a choice of pigment are well illustrated by Dr Taylor's case in which a quantity of green pigment had attached itself to some loaves of bread which were supplied to his own household. This pigment on being analysed yielded fifty per cent. of arsenic, and had been taken off the baker's shelves by the heat of the new bread which had been placed upon them. Even the air of a room in which a quantity of stuffed birds were placed was found to be impregnated with this compound, the presence of which gave rise to symptoms of poisoning. Bird-stuffers use preservative preparations in which arsenic holds a chief place.

Enough has been said to shew the dangers by which we are surrounded in many ways—dangers these which like solid facts may serve as the beacon-lights of the wise amongst us. It is perfectly true that other ways and means of producing colour exist than those in which arsenic forms a chief ingredient. Science has been most successful in producing colouring-matters which are absolutely harmless. But so long as cheapness is an object to the manufacturer, so long experience seems to prove to us will deleterious substances which cost little be used to produce effects, the mere utility of which (as for instance in the case of confectionery) may be gravely questioned. Under the circumstances, and as a matter of public health and safety, there seems no resource but to indicate strict parliamentary legislation in these matters as the chief hope of the sanitary reformer. The public health is a matter over which jealous guardians appointed by the state should, and to a certain extent do, keep watch. But in such directions as those we have indicated there seems to have been little or no attempt made to sternly suppress the manufacture and use of noxious ingredients, which as we have pointed out, injure not merely the public health, but needlessly endanger the physical well-being of those engaged in the occupation. But a few years ago, the Adulteration Act struck at the root of a very base and nefarious proceeding. It is not too much to say that posterity will have cause to hail that legislator as a true benefactor to his country and race, who shall frame and carry into law an enactment forbidding the wholesale use of the very poisons from which in another way we are

protected by the legislation affecting the chemist's shop.

It would appear moreover, that other nations have, in this respect, set us an example we should do well to follow. In Germany the sale of arsenical wall-papers is illegal. In France also, no such papers are permitted to be sold; and as early as 1845 their manufacture was prohibited in Bavaria. It is, however, interesting to note that soon after the Bavarian edict was passed, a concession was made to the manufacturers of such papers, with the result of again permitting the practice. But abuses soon crept in; and a Commission of inquiry having declared that cases of arsenical poisoning were on the increase, the original law of 1845 was again put in force, with satisfactory results. In our own country, evidence of the highest order was adduced before a Committee of the House of Lords in 1857. The Sale of Poisons Act was thereafter framed, but this Act affects the pharmaceutical relations of drugs and poisons alone, and leaves as we have seen, the wholesale use of arsenic and other poisons in our houses, and in our food, absolutely unrestricted. The cry of hardship to the commercial world is one which is of no avail where death and disease exist as the plain alternative to the unrestricted use of noxious and commonly used substances. And were evidence required on this subject, and regarding the possibility of the presumed hardship and interruption to commerce being successfully combated, we might cite Mr Hogg's remark that the Messrs Cooke of Leeds do not allow arsenic in any form to be used in their manufactory.

The dangers by which we are environed are unfortunately not limited to those arising from the manufacturers' unwarrantable use of arsenic. A volume might be written with good effect and with more than sufficient reason on the dangers to health which proceed from such sources as lead-poisoning produced by the chemical action of water on the lead of pipes and cisterns. But there are common precautions known to every householder which readily avert the possibilities of such contamination. Lead in other forms may affect us however. This metal in one form or another—most commonly in that of 'sugar' or 'acetate of lead'—is found in some of the hair-dyes and cosmetics with which the advertising columns of our journals and newspapers teem. In such a form, the presence of lead has been known to give rise to very serious effects—all the more to be deplored because of their thoroughly preventable character by the disuse of these fables of the toilet-table. Of the dangers arising from the use of copper vessels in the kitchen much has been written and said. Chemical changes of injurious and poisonous nature are apt to result when copper is brought in contact with foods containing acids or oily or fatty matters, which oxidise the metal, and impart a green hue to the food. Therefore no food containing acid, or of an oily nature, should be prepared or be allowed to cool in a copper vessel. In a clean copper vessel, food may be prepared without danger, provided it is allowed to cool in another vessel of different material. The pickle-manufacturer has occasionally been known to use 'blue-stone' or sulphate of copper to colour his preparations. A familiar test for this most unwarrantable adulteration, is that of placing a steel needle in the suspected bottle of pickles,

when if copper has been used, the needle will become coated with a deposit of copper.

The list of common household dangers might be indefinitely prolonged, but enough has been said to draw attention to the character of the influences which may beset us even in these days of advanced civilisation and social luxury. If science has provided us with many deleterious substances useful in the arts and manufactures, it has no less clearly shewn us the remedy for their action, and has above all produced innocuous substitutes which may be employed in their stead.

MY NEIGHBOUR'S WIFE.

IN TWO CHAPTERS.—CHAPTER II.

IN the course of our conversation I have discovered that Charlie is a doctor, that they live at Kensington, that they have come to Brighton for a fortnight because Charlie is done up with hard work, and that they are going to stay with some friends in Regency Square. I had hoped they would put up at the same hotel as myself; for somehow or other I am interested in my travelling companions. And yet, I don't know that I am particularly interested in Charlie! What man is particularly interested in any member of his own sex?

For two days I see nothing of either of them, although I am out from early in the morning till late at night, and keep a pretty sharp look-out for a navy-blue serge dress and deer-stalker hat. Such dresses there are in plenty, and I have had one or two disappointments in the matter of the hat; but a second glance at the wearer puts all doubt to rest, for Charlie's wife has a nameless grace that few of these fashionable fair possess. I begin to feel very bitter towards Charlie, who is evidently a thorough Bluebeard, and keeps his wife locked up in some back room at Regency Square; for must I confess to having occasionally strolled by that quarter and scanned not a few of the numerous windows, in hope of catching 'only a smile as I passed?' However, on the evening of the third day I happen to be walking along the beach in the direction of Bluebeard's Castle, when suddenly I come upon Charlie, his wife, and a very stylish-looking girl, whom I instantly set down as one of the friends with whom they are staying. She is walking next to Charlie; and indifferent as my sight is, I can see how affectionately she is looking up into his face, and that evidently he is not repelling those amorous glances. His neglected little wife is gazing absently at the great foam-crested waves that come tumbling on to the shore, no doubt wishing that one would come and carry her far away from the man to whom she is bound soul and body. So 'wrapt in dismal thinking' is she, that I pass unnoticed. As for Charlie, he has eyes for nought else than the girl at his side. I turn and watch them out of sight, with an overwhelming desire to perform the part of that wave, for which (I imagine) she is vainly, sadly longing, and to snatch her up and bear her far away from her cruel faithless bondsman, to a home where she should reign a very little queen, and where Harold Gilchrist would be her most loyal and loving subject. 'Thou shalt

not covet thy neighbour's wife,' whispers that troublesome mentor Conscience; but I stoutly refuse to obey its dictates, and Mrs Charlie—by-the-bye, I wonder what her other name is?—plays a very prominent part in my dreams.

The following morning I stroll down to the beach as usual about half-past nine, take a dip, then ensconce myself behind a high shady breakwater, and prepare to enjoy my meerschaum and a novel, with a faint hope that the heroine of my dreams may pass this way. I have just finished my pipe when I hear a rustling on the other side of the breakwater, and presently some one begins to read aloud. It is a man's voice, deep but not unpleasant; he is reading the well-known tale of *Enoch Arden*. Whoever the reader may be, he certainly understands the art of managing his voice. Now it rises, now it falls, now it is sorrowful, now angry, now tender. Every inflection is perfect, especially the last, which leads me to suppose that his auditor is not his sister or his mother; and this opinion is soon afterwards confirmed. When the poem is ended, I hear a musical voice say: 'Poor Enoch!'

'Yes. Rather an awkward predicament—wasn't it—to come home and find your wife married to another man? What would you have done, Miss Fairfax, if you had been in the heroine's place?' queries the reader earnestly.

'I don't know, Dr Carington. I cannot imagine anything so dreadful as being married to one man and loving another,' answers his companion in a low awe-stricken voice.

'Or *vice versa*,' he puts in. 'And yet how often it occurs! How many men are drawn into marrying a woman for whom they have not one spark of real love! One half the marriages nowadays are mistakes.'

'Yes,' sighs Miss Fairfax; 'you have good cause to say so.'

'Mabel, don't remind me of my folly! It is a thing of the past now, and regret is useless,' he says in passionate low tones. Then his voice takes a dangerously tender inflection: 'Mabel, do you despise me for that mistake?'

I begin to feel that I am playing a dishonourable part in listening to a conversation evidently not intended for a stranger's ears; but something roots me to the spot, and I strain my ears to catch the girl's reply; it is almost inaudible, even though the partition that divides us is very slight. 'You know I do not, Dr Carington.'

'Then why do you punish me for it so cruelly? Can you not see that it is to you, and you only that my heart is given? That other poor girl—heaven help her!—knew nothing of what had gone before, or she would never have married a man whose life's love was given to another. Poor child! She never guessed that I repented my rashness, directly the words that sealed both our fates had left my lips. Mabel! have you quite forgotten those old happy days when we were all in all to each other?'

No answer.

'Have you, darling?'

No answer.

'Mabel, you torture me! Say, have you forgotten?' pleads the man in hoarse accents.

'How could I?'

'Then darling, by the memory of those by-gone days when no one had come between us—by the

love which has never died, and can never be overcome, I implore you to end my misery, and to break the foolish vow that keeps us apart! It is not only for my sake, darling'—

'But Charlie, your wife'—

'Charlie, your wife!' I wait to hear no more; but start to my feet, and one glance behind the breakwater confirms my worst suspicions. Reclining beside the girl with whom I had seen him walking on the previous evening, is my poor little friend's faithless husband. His false eyes are fixed on the dark face bending over him, with a hungry passionate love that quite transforms his somewhat apathetic countenance; and restraining an almost overpowering impulse to lay him dead at the feet of his guilty, heartless love, I stride wrathfully away, with a great unutterable pity at my heart for the pretty child who has been so ruthlessly betrayed. Of one thing I am resolved—that is, she shall not remain in ignorance of the intimacy existing between her wretched husband and her supposed friend. The blow may seem a cruel one; but better—far, far better that she should know their true characters now, than in the time to come, when her love would perchance have taken deeper root, and have become a part of her life. Poor little wife! Poor loving little heart! Will you thank me for tearing the veil from before your eyes, or will you rue the day when I first crossed your path? I know not; but whichever it may be, my purpose is unalterably fixed.

At first I think I will send an anonymous letter, to warn Mrs Carington of her husband's treachery; then I remember that I do not know their exact address. Moreover, I hate anything underhand, and it seems such a harsh, coarse way of awaking her from her brief dream of happy married life. I never doubt her love for the man whose name she bears. 'Charlie dear!' I hear the sweet fond voice repeating, and a strange mist rises to my eyes as I think that in a few short hours I must slay that trustful love with a relentless hand. And yet why should I? I am to them a stranger, as they are strangers to me. What right have I to interfere in what does not in anyway concern me? All the remainder of the morning and all the afternoon I wrack my brain as to whether I am justified in disclosing the sad truth; and still undecided, I wend my steps in the direction of Regency Square. I walk gloomily along, my eyes bent on the ground, and my mind all concentrated on the one subject. So engrossed am I, that when a silvery voice at my elbow bids me 'Good-evening,' I start as guiltily as though I had been planning a murder. Perhaps I have; who knows? Many women have died from broken hearts, and am I not about to break Charlie's wife's? Hastily I raise my eyes at the sound of that sweet voice; and I feel the hot blood rush to my shamed face when I find myself side by side with the object of my unhappy thoughts. How bright and pretty she looks, in her soft gray dress and rose-wreathed hat! The wind is blowing the soft yellow rings of her hair all about her lovely childish face, and her violet-hued eyes dance with happy content. Oh! Harold Gilchrist, your task is a hard one! No wonder you shudder when you take that friendly little hand in yours!

'I thought at first that you had forgotten me,

for you stared at me as though I were a spectre,' laughs Charlie's wife.

'Did I?' I query in a voice that I vainly strive to make gay as her own.

'Yes; even now you don't appear to have quite recovered from the shock.'

'How do you like Brighton?' I ask, anxious to change the subject.

'Oh, it is delightful! I am as happy as the day is long; and as for Charlie, he is already getting quite himself again. That fact alone is sufficient to make me love Brighton. We were all so anxious about the dear boy. He is so good and clever, that every one likes him; and his practice is increasing so rapidly that he is literally worked to death,' she answers, her lovely face aglow with fond pride.

'You love him very dearly?' I awkwardly stammer.

She looks up at me with such honest surprise in her innocent blue eyes!

'Love Charlie! Of course I do; better than any one in the whole wide world. What makes you ask me such a question?'

There is no trace of anger in her tones, only wonder that I should doubt her affection for him to whom she is bound by vows taken in the sight of heaven.

'I—I didn't know. One is apt to make a mistake, even in marriage,' I blurt out fiercely, tugging at the hirsute appendage on my upper lip in sheer desperation at the awkwardness of the situation. No; I can't do it! Better leave her to find out the truth by degrees, than let my mouth speak the daggers that will pierce her very heart's core. And yet—

'Did you think I had made a mistake?' asks Mrs Carington, looking up at me with a half-mischievous, half-triumphant, and wholly captivating smile.

I make one great despairing effort to keep back the cruel monosyllable that rises to my lips; but it will force its way through. 'Yes.'

'You did! Why?'

'Can you not guess?' I ask, vainly hoping that my task may be rendered easier by her reply.

'No; unless it was because Charlie was rather vexed with me for talking to you in the train, the other day; and you set him down as an unreasonably jealous tyrant. But I assure you he is not jealous, in the ordinary acceptation of the term; he is only very careful of me, and did not like my talking so familiarly to a stranger. Is that why you thought I had made a mistake?' she interrogates eagerly.

Oh! why can she not understand?

'Can you think of no other reason for my thinking so? My opinion was not founded on anything that occurred that day,' I add.

'But we have only met once since.'

'I saw him last night,' I announce so solemnly, that my companion breaks into a merry mocking little laugh.

'And what was he doing to me then—beating me?' she saucily queries.

'No; he was too much engaged other ways than to be paying his wife even that attention,' is my angry retort. I have taken the dreaded plunge now, and my suppressed passion breaks loose, regardless of control.

'You mean that he was too busy flirting with

my friend Miss Fairfax, to take any notice of me. Is that all ?'

Can I believe my ears ? Are those cool collected tones Charlie's wife's ? I feel that I have made myself a fool, and that she is amusing herself at my expense.

'Is that all ?' I echo scornfully. 'No ; it is not ;' and heedless of the pain I may be—must be, if the girl has any heart at all—inflicting, I pour forth the story of her husband's faithlessness and her friend's treachery.

She hears me to the end without comment of any kind, her eyes fixed on the ground, and her lips tightly compressed. I see no signs of tears on the thick drooping lashes, no paling of the rose-tinted cheeks. Even when my tale ceases, she maintains that unnatural silence. It alarms me, this stony calm, far more than would any violent outburst of grief.

'Mrs Carington, for heaven's sake, speak, if only to reproach me for opening your eyes to the sad truth !' I exclaim, my voice wrung with sorrow.

No answer, save a curious twitching of the pretty coral lips and a smothered inarticulate sound. It cannot be a laugh, unless in my cruel awakening I have driven her mad. I feel my face blanch deathly white at the horrible thought, and cry in agony : 'For pity's sake, speak ! You frighten me.'

Slowly the long lashes are lifted, and a pair of unmistakably sane blue eyes meet mine. 'Who told you Charlie was my husband ?'

Had a thunder-bolt fallen at my feet, I should not have started more violently than I do at those few calmly spoken words.

'Why, yourself, madam !' I gasp, almost speechless with astonishment.

'Pardon me ; it was you who gave him that title, not I,' she answers, her eyes demurely wicked.

'Then what, in the name of patience, is he ?' I exclaim, half laughing in spite of feeling most uncomfortably 'small.'

'My brother.'

The ridiculous rôle I have been playing proves too much for my gravity, and I burst into a hearty peal of laughter, in which Miss—not Mrs—Carington joins.

'Why did you allow me to continue in my absurd mistake ?' I ask, when our mirth has slightly abated.

'Oh, just for fun, you know. I told Charlie all about it afterwards, and he *did* laugh.'

'But after all, the fact of your brother's infidelity to his wife—whoever she may be—still remains,' I say, grown suddenly grave, and beginning to think our mirth somewhat ill-timed.

'You mean well, I see, but you do not understand. Poor boy ! he has had a great deal of trouble, and we seldom talk of it. But it is necessary that I should vindicate his honour in this instance. When little more than a mere boy, he fell in love with Mabel Fairfax,' explains Miss Carington ; 'and in course of time they became engaged. Shortly after their engagement, Charlie, being in delicate health, went out to Melbourne for a thorough change, intending that the wedding should take place immediately he returned ; and Mabel left London on a visit to some friends in Hampshire. After she had been gone two or three weeks, reports began to reach

us that a wealthy Squire down there was paying her a great deal of attention, and that she in noway repulsed him ; in fact our informant—who by the way was terribly jealous of Mabel—gave us to understand that she evidently regretted her promise to Charlie. This was quite enough for poor mamma ; she had always been averse to my brother's early engagement, and thought this an excellent opportunity to get him to break it off. So she wrote and told him all she had heard ; and by the next mail came a letter to say that he was married to a young lady whom he had met on the voyage out. Of course he had only married her to spite his supposed faithless one. Poor mamma did not long survive the news ; she died in a fit of apoplexy ; and as there was no one else to take care of me, and our property required looking after, Charlie and his wife came to live in England. But the poor girl was consumptive, and our uncertain climate soon killed her. As you may imagine, Mabel was almost heart-broken when she heard that Charlie had so readily believed the false stories raised against her, and had revenged himself by marrying a girl he had known but a few weeks. She was angry too, dreadfully angry, and vowed never to trust in man again. Many times since he has been free has Charlie asked her to marry him ; but although he is as dear to her as he ever was, and although she has quite forgiven him, she will not break her vow ; and until she does, the poor boy will never be happy.—So now, are you not ashamed of having so misjudged the very best brother on earth ?' she saucily demands.

'What a fool you must have thought me !' I say shamefacedly.

'Rather,' she returns with a demure little smile.

'Will you forgive me, and promise, as a favour, not to tell any one of my absurd mistake ?' plead I, feeling unaccountably happy without exactly knowing why.

'I will forgive you ; but I don't know about not telling. The joke is too good to lose.—Talk of the angels and they are sure to appear !' she suddenly exclaims. 'Here come Charlie and Mabel. I will introduce you to my "treacherous friend" and my "faithless husband,"' she laughs.

'Be generous, Miss Carington,' I entreat ; but the whole story comes out ; and the principal actors in it having come to a very satisfactory understanding during the last few hours, I am readily forgiven my eavesdropping, and we spend the evening together very pleasantly. I discover that the Caringtons are very friendly with my *bête noire* Lady Haughton, and that they have met my mother at her ladyship's house on one occasion ; moreover, I hear with curious satisfaction that Miss Carington thinks my maternal relative the 'nicest old lady' she ever saw.

'I say, Olive, I wonder if Mrs Gilchrist told a certain gentleman your opinion of him ?' puts in Charlie slyly. 'Because if not, I think I will.'

'Charlie, if you dare utter another word, I'll box your ears !' threatens his sister, blushing to the very roots of her golden curls.

'One good turn deserves another,' laughs her brother. 'You told tales of Mr Gilchrist, so I tell tales of you.—You must know, Mr Gilchrist, that your mother and my worthy sister were looking

over Lady Haughton's album together, when they chanced to alight on "the portrait of a gentleman," which especially took Miss Olive's fancy—she is very impressionable, you must know. With all the enthusiasm of "sweet seventeen," she did not hesitate to pronounce him "the handsomest man she had ever seen;" and with extreme naïveté, turned to Mrs Gilchrist to know whether she was not of the same opinion. "You must not ask my opinion, my dear, for I am a partial critic; that gentleman is my son," answered your mother. I leave the rest to your imagination!

So I have discovered the perpetrator of that very 'palpable fib;' and Miss So-and-so turns out to be Miss Olive Carington! Harold Gilchrist, did you not once say that 'that fib alone' would have destroyed any Miss So-and-so's chance of ever becoming Lady Gilchrist?

Well, what if I did? It is not the first mistake I have made. Moreover, Miss So-and-so implores me not to put faith in Charlie's veracity. But I don't know about that; I am inclined to think he is telling the truth, and nothing but the truth.

We part at Regency Square, the very best friends possible, and as I hold in mine a certain little hand, I say to its fair owner: 'Do you know I have been guilty of a great sin?'

'What is it?' she queries, not withdrawing that dear little hand.

'Breaking the second clause of the tenth commandment: "Thou shalt not covet thy neighbour's wife,"' I reply. Immediately the hand is snatched away, and Miss Carington runs indoors.

'Harold!'

'My darling!'

'I have some news for you. Charlie and Mabel are to be married on the 24th of next month.'

'Indeed, I am glad to hear it. Charlie is such a good fellow that he deserves to be happy.'

'You didn't always think him "such a good fellow,"' says my saucy wife of two blissful months' standing.

'No; there was a time when, as your favourite Macaulay says of Byron, I began to think it my duty to hate my neighbour, and to love my Neighbour's Wife.'

A NOBLE DEED.

AN INCIDENT OF THE INDIAN MUTINY.

TWO-AND-TWENTY years ago a deed was performed which has scarcely any parallel in the annals of modern wars. The hero of it was a gentleman belonging to the Uncovenanted Civil Service of India, named Thomas Henry Kavanagh, whom we lately referred to in our article on the 'Two Crosses of Honour' as having been killed in battle; but who, we are glad to learn, is still living, and holding a high official position at the scene of his wonderful exploit. A generation having sprung up since the eventful times of the Indian Mutiny, we make no hesitation in recalling and offering to our readers the story of the exploit itself.

India—that brightest gem in Queen Victoria's crown—trembled in the balance; and the empire

was thrilling with horror over the terrible massacre of English women and children at Cawnpore, when the news came that a gallant little band of devoted men were defending themselves in the Residency at Lucknow against the hordes of a savage and relentless enemy. From the beginning to the end of this remarkable siege, Kavanagh—civilian though he was—appears to have figured conspicuously in the defence, for no sooner was the Residency invested by the mutineer forces, than he set to work to arm and drill all the civilians in the place; and in spite of much ridicule from the military men, ultimately succeeded in organising a corps of volunteers that did splendid service for the state. Tall and handsome, with an evident *empressement* for military life, Kavanagh proved himself the *beau-idéal* of a hero; and in a book published by him in 1860, entitled *How I won the Victoria Cross*, he describes the yearnings of his heart for distinction, and the feelings of exultation with which, when he rose from a sick-bed in which he had been prostrated by a brief illness, he heard that the siege was not yet raised, nor the Mutiny over.

Two-and-twenty years is not a very long period in the history of a nation; but in these go-ahead and progressive times, when grand and important events are of frequent occurrence, the past becomes a dim perspective, in which names and scenes that were once as familiar to us as household words are relegated to an obscurity which they do not deserve. Such exploits as that which we are about to relate are, however, like hidden jewels, which ever and anon flash forth with greater brilliancy than before, exciting the increased admiration of all who gaze upon them. The siege of Lucknow put to the test all those qualities which Englishmen possess and exhibit in times of supreme necessity—namely, a sublime confidence in the midst of danger, a noble sense of duty, and an unselfish heroism; and the brave man who is the subject of this narrative seemed to have been endowed with them in an unusual degree.

The march of Havelock and his brave column to relieve the devoted band cooped up in the Residency was watched in England step by step with intense eagerness; but, through the losses sustained on the way thither by battle and disease, it became impossible to compel the mutineers to raise the siege; and even after the entrance of the relief column, it was conducted as vigorously as ever.

During five long months the little garrison was put to its wits' end to meet the constant and ever-recurring attacks of the enemy. Repelling sorties, mining and countermining, repairing breaches, &c., was the work that was always going on; and none was more willing and brave than the gallant Kavanagh, who, though wounded several times, was ever to be found at the post of danger. We should also mention here, as an interesting fact, that Kavanagh's wife was also wounded during the siege and laid up for several weeks. At length in November came the welcome news that Sir Colin Campbell—afterwards Lord Clyde—was advancing with a strong British force to the relief of the garrison; and on the ninth of that month Kavanagh learned that a spy had come in from Cawnpore, and that he was going back again to the Alum Bagh, with despatches for Sir Colin. Indeed it had become necessary that Sir Colin's

march should be hastened, and that he should be guided to the city by the least hazardous route. But who was to be the guide? Sir James Outram says, in a letter on the subject, dated about a year after the event: 'The almost impossibility of any European being able to escape through the city undetected, and the certainty of his murder if detected, deterred me from ordering any officer, or even seeking volunteers for such a duty.'

A volunteer for this extraordinarily dangerous adventure did, however, present himself in the person of Kavanagh. He had sought out the spy, whose name was Kunoujee Lal, and finding him intelligent, he expressed his desire to proceed with him in disguise to the Alum Bagh. The spy at first hesitated; and urging that there was more chance of detection by two going together, proposed that they should take different roads, and meet outside the city. This Kavanagh objected to, and then proceeded to finish some business he had in hand, his mind, however, still dwelling upon the accomplishment of his object. At last he made up his mind, and proposed the enterprise to Colonel Napier, the chief of Sir James Outram's staff. The Colonel considered the noble offer of Kavanagh to be fraught with too much danger to be accepted, but promised to inform Sir James Outram of it, considering that such zeal deserved notice.

Outram was at once surprised and pleased by Kavanagh's offer; but he pointed out the extreme danger of such an attempt, and endeavoured to dissuade him from it, while at the same time stating how valuable such assistance would be to Sir Colin Campbell. Kavanagh was, however, so earnest in his entreaties, that the General at length consented, with the *proviso* that if Kavanagh should think the risk too great, and wished to withdraw from the enterprise, he was quite at liberty to do so. Kavanagh was, however, formed of the stuff of which heroes are made; and having made himself acquainted with Sir James Outram's plans, he proceeded to disguise himself for the journey. This he had secretly arranged, as he did not wish his wife to know anything of the undertaking until his safe arrival at the Alum Bagh should be signalled to the garrison.

A portrait of Kavanagh in his disguise forms the frontispiece to the book we have already mentioned, and he thus describes it himself: 'I was dressed as a budmash or as an irregular soldier of the city, with sword [tulwar] and shield, native-made shoes, light trousers, a yellow silk kowtah over a tight-fitting white muslin shirt, a yellow-coloured chintz sheet thrown around my shoulders, a cream-coloured turban, and a white waistcoat or kumurbund. My face down to the shoulders, and my hands to the wrists, were coloured with lamp-black, the cork used being dipped in oil, to cause the colour to adhere a little. I could get nothing better. I had little confidence in the disguise of my features, and trusted more to the darkness of the night.'

To shew the thoroughness with which Kavanagh did this part of his work, it is only necessary to mention that the materials of which his costume was composed were borrowed piece by piece from separate natives. When the disguise was thus complete, he proceeded at half-past seven P.M. to the General's quarters, where he at once tested the genuineness of his metamorphosis. Nobody recog-

nised him until he made himself known, and then Sir James Outram himself put the finishing touches to his toilet. Placing a double-barrelled pistol in his waistband, and additionally armed with a tulwar, Kavanagh then took leave of the General and his staff, and proceeded with Kunoujee Lal to the right bank of the river Goomtee, running north of the intrenchment, accompanied by Captain Hardinge of the Irregular Cavalry. Here the latter bade Kavanagh adieu, after stating that he would have given his life to have done the same thing, and with the words, 'Noble fellow—you will never be forgotten!' left him to his adventure.

Kavanagh and his guide then undressed themselves, and began to ford the river, which at that point was about a hundred yards wide. Kavanagh owns that he felt his courage failing him as he entered the cold water; but seeing the guide walking quickly towards the opposite bank, he followed him. On reaching it, they took their bundles of clothes from their heads and dressed themselves again, at the same time narrowly escaping observation by a sepoy who had come down to a pond in the neighbourhood to wash. On finding, however, that they were not observed, confidence returned to them, and they proceeded straight towards the huts in front, where Kavanagh accosted a matchlock-man with the remark that it was a cold night. The man replied that it was 'very cold;' to which Kavanagh laconically added that it would be colder by-and-by. After being questioned by a sepoy officer, who commanded the enemy's picket at the iron bridge over the Goomtee, Kavanagh keeping out of the light and allowing his guide to answer, they proceeded on their way along the bank of the river, passing a number of sepoys and matchlock-men, who were escorting persons of rank in palanquins, preceded by torches. Recrossing the river by the stone bridge, and unobserved by the sentry who was on guard over it, but who was chatting with a native, they passed into the city of Lucknow, where Kavanagh jostled against several armed men without attracting attention, and only met one guard of seven sepoys, who were amusing themselves with some women.

From the city they passed into the green fields, which Kavanagh had not seen for five months, and he says that a carrot which he took from the roadside was the most delicious he had ever tasted. A further walk of a few miles was accomplished in high spirits; but they soon found out that they had taken the wrong road, and were in the Dilkooshah Park, which was in possession of the enemy. Here Kavanagh shewed his wonted courage by going within twenty yards of two guns, to find out the strength of the enemy. Kunoujee Lal was in great alarm, as he feared that Kavanagh would think that he was acting the traitor; and he begged him not to distrust him; as the mistake was made by his anxiety to avoid the pickets of the enemy. Kavanagh reassured him; and they then walked into the canal, running under the Charbagh, where our hero suffered much on account of his boots being hard and tight, they having skinned his toes and cut into the flesh above his heels. At length, after two hours' wandering, two women put them into the right direction, and they received further information on the subject from an advanced guard of sepoys, whose questions they

had first answered. At one place a man, frightened by their approach, called out a guard of twenty-five sepoy, all of whom asked questions, and here Kunoujee Lal became afraid for the first time, and threw away the letter intrusted to him for Sir Colin Campbell.

After wading through a swamp for nearly two hours up to their waists in water, and being nearly exhausted with fatigue and anxiety, Kavanagh insisted upon having some rest, in spite of the remonstrances of his guide. After a halt of about a quarter of an hour, they again went forward, and passed through two pickets of the enemy, who had no sentries thrown out. This was about four o'clock in the morning, and Kavanagh lay down to sleep for an hour, although Kunoujee Lal again protested against it. Suddenly, they heard the pleasant sound of the British challenge, '*Who comes there?*' delivered with a native accent; and to their joyful surprise they found themselves within the lines of Sir Colin Campbell's camp, which they believed to be still many miles distant. An officer of the 9th Lancers conducted Kavanagh to his tent and gave him a glass of brandy, and he then asked the way to the Commander-in-chief's tent. Meeting an elderly gentleman coming out of the tent in question, Kavanagh asked him where he could find Sir Colin Campbell.

'I am Sir Colin Campbell,' was the quick reply. 'Who are you?'

'This will explain, sir,' replied Kavanagh, taking from the folds of his turban a note of introduction from Sir James Outram.

Sir Colin read it hastily, and glancing at Kavanagh with his keen eyes, he asked if it was true.

'Do you doubt me, sir?' asked Kavanagh.

'No, no,' replied Sir Colin; 'but it seems very strange.'

Sir Colin was anxious to hear his story; but Kavanagh, worn out with the strain upon his mental and physical system, begged to be allowed some sleep—a request which was immediately complied with, and the tent darkened for the purpose. Here the brave fellow poured out his thanks to God for his safety, and dreamed of the honour which awaited him from a grateful country. When he awoke from his sleep, Kavanagh was very cordially received at Sir Colin's own table, where, over a substantial repast—to which he did ample justice—he recounted to the Commander-in-chief and his staff the adventures through which he had passed.

In the meantime, the devoted garrison in the Residency had signalled, 'Is Kavanagh safe?' But the signal could not be read. Shortly afterwards, however, the preconcerted signal—namely, the raising of a flag at the Alum Bagh, told Sir James Outram that the hero was beyond the risk of further danger. Then Mrs Kavanagh was made acquainted with her husband's heroic act, and received the congratulations of all.

We have no space to give all the details of Sir Colin Campbell's march to the Residency; but Kavanagh, by his bravery and intelligence during that march, was certainly the man who, next to the Commander-in-chief, contributed most to the success of the attack. Indeed, never was a nobler act than that of Kavanagh's; and when he appeared again within the walls of the garrison which he had risked his life to rescue, and was thus the

first man to relieve it, the cheers and greetings with which he was received by its half-famished defenders must have been dear to his soul.

'Lucknow Kavanagh' he was named on the spot; but it was not until the year 1860 that Kavanagh received the reward which was the height of his ambition—the Victoria Cross. This was fastened on his breast by Her Majesty at Windsor Castle, in the presence of her body-guard and the members of her family; Kavanagh having been the first civilian on whom the decoration was bestowed.

TOLD IN THE FIRELIGHT.

WE were all gathered round the fire in the dining-room; Edgar close to papa, Jessie sitting on the rug, Fred nestling close to mamma, and I, as usual, at Aunt Edith's right side. It was a wild November night, with the rain beating pitilessly against the closely curtained windows, the wind whistling shrilly through the leafless elms outside, and playing mad pranks with the tall red chimneys of 'Garriek House,' as our home was called ever since Mr Garriek the famous player paid our great-grandpapa a visit. Before that, the house was simply 'The Elms;' and very proud we still were of the grand old trees from which it took its first and most appropriate name.

It was exactly the sort of night to make us all gather round the wide old-fashioned hearth, where the logs were blazing merrily, and to cause us to feel grateful for the blessings we enjoyed, and involuntarily to pity those who were less fortunate. The wind coming down the chimney in fitful gusts, made the candles flare and flicker so weirdly that Jessie proposed putting them out, and sitting cosily by the firelight. Books and work were neglected, the chess-board put aside, and pussy was making sad havoc of mamma's knitting without any one interfering. In fact, we were all in a delightfully comfortable indolent meditative mood, and it only wanted a story to complete our happiness. But Aunt Edith, whose resources in that respect fairly rivalled the inventive lady in the *Arabian Nights*, was silent and grave. Papa seemed grave too; and even our dear merry mother seemed to be thinking of something melancholy. We children, with that instinctive feeling of awe we sometimes experience, we scarce know why, glanced at each other in mute wonder and curiosity, expecting something to happen every moment. The day had been dull and oppressive, and the afternoon had been threatening a storm, when suddenly a loud peal of thunder seemed to shake the house to its very foundation.

'It was just such a night as this, Robert,' said aunt to papa with a little shiver.

'Exactly,' papa replied thoughtfully; 'and the same time of year too.'

'Suppose you tell the children all about it,' mamma said quietly; 'they look as if they wanted to know very much.'

'Well, since it is perhaps time they knew, I will tell you how Aunt Edith saved my life,' continued

papa, turning to Edgar the eldest of us, 'long ago, long before you were born, my boy!'

There was a little bustle as we settled more snugly into our places, a few moments' impressive silence, and then papa began.

'Aunt Edith and I were only brother and sister; ever so much greater cronies than you and Edgar are, Jessie, not only because we had but each other to love, but because we had to make common cause against an enemy, Jeffrey Lawson, our step-mother's son by a previous marriage. We lost our own dear mother when we were babies. Jeff was ten years older than I was; and after our father's death, which happened when I was eight and Edith six, we would have had a poor time of it but for Dame Turtle our dear old nurse. She looked after our interests, and fought all our battles valiantly whether we were in the right or the wrong. Our step-mother was so wrapped up in Jeff, that she bestowed little trouble upon us. I, especially, was no favourite, for she got a silly idea into her head that I stood between Jeff and the property of Garrick. He was a fine handsome fellow, as I remember him when I was fifteen, and he five-and-twenty; strong and daring, haughty in disposition and hasty in temper. I could see even then that he bitterly resented my being master, and himself as it were nobody; for all our servants had grown old with us, and were staunch and loyal to us children of the house.

'Our mother—we called her so, though she was "little more than kin and less than kind"—resented it too, and looked forward with very bitter feelings to the time when I would be twenty-one; for then, according to our father's will, she was to leave Garrick, and reside in a little cottage he owned in Wales. It would be a different position for her, as she had but a small jointure—all her own fortune had been spent on Jeffrey—and by some inexplicable chain of woman's reasoning, she blamed me for what she was pleased to call her unmerited misfortunes. Each year that passed made matters worse between us. As I grew older, many things in the management of the property struck me as very unjust. The best of the timber was being cut down; the house allowed to fall into a state bordering on ruin, because my mother would not spend money on repairs which I alone was to enjoy the benefit of. Our family lawyer was dead. Jeffrey chose his mother's legal adviser, and neither Edith nor I knew where to look for advice or assistance. Things remained very much in this state till I was nearly twenty, when one day Jeff entered my room in a state of wild excitement, and shewed me a will that he had discovered in some out-of-the-way corner. It was dated a few days before my father's death; and except that it bequeathed to Jeffrey the sum of five thousand pounds, and the reversion of Garrick if I died without heirs, it was substantially the same as the one already in existence.

'I had my doubts about the validity of the document, but I passed no comment; both the witnesses were dead, and I had not a shadow of proof to advance. Suspicions in such a case go for nothing, so I held my peace, the more especially as Judson our old steward was prepared to swear to my father's signature. So Jeff Lawson had his five thousand pounds.

'On the night of which I am going to tell you, there was a large part of the money in the

house. Jeff was going to London the next morning; and as he meant to start early, he said good-bye to us overnight, and went up to his room first, carrying the money with him. Edith and I remained in the dining-room a little longer, chatting on different matters; amongst others, of Jeff's departure, of a strange restlessness I had observed in his manner of late, of the possible date of his return; and somehow, quite unintentionally, I let fall a hint of my suspicions about the will, and discovered that they corresponded exactly with Edith's. At last, when the fire had burned quite out, and the candles were getting low in their sockets, we went up-stairs together. It was a wild November night, with just such angry impatient gusts of wind and vagrant thunder-claps as this. I occupied the west room; your aunt the one adjoining; and Jeff slept in the east room at the other end of the corridor; while his mother had her apartments in the south wing. As I bade Edith good-night, the clock on the stairs struck twelve, and she merrily wished me many happy returns of the day, for I had just entered on my twentieth birthday. In a few minutes more my light was extinguished, and I was cosily wrapped up. In less than half an hour I was sound asleep. Not so Aunt Edith. She was, she told me afterwards, restless and nervous, two most unusual things with her. All her efforts to sleep were unavailing, and she gave up the attempt at last and rising from bed, sat down by the fire to read. Twice she fancied she heard footsteps in the corridor, and opened her door to listen.—Your aunt was not afraid of the White Lady, our family ghost, nor Lady-anybody-else, girls.—Twice she threw herself on a couch with the intention of resting, since slumber was out of the question; but between the storm and the mysterious sounds through the house, rest was impossible. At length, about two o'clock, she fancied she heard some one moving about my room very cautiously; and nothing doubting but that I was as wakeful and restless as herself, she resolved to come in and speak to me. A sudden gust of wind in the corridor extinguished her candle, and she entered my room in the dark, save for a faint ray of moonlight which shone through the carelessly drawn curtains.

'As your aunt gently approached my bed, she saw a form advancing on the other side with uplifted hand, in which something bright gleamed in the moonlight. Quick as thought, without a moment's hesitation, her arm was thrown across my neck. The knife of an assassin descended with terrible force, and glancing off the bone, inflicted a long and jagged gash in her arm. The assassin, who had not seen or heard her approach, instantly fled, leaving his weapon behind; and I was aroused from my slumbers by Edith's shrieks, to find myself bathed in her blood. In a moment I was all awake. Binding my silk handkerchief round her arm tightly, to check the bleeding, I sent a servant—for the whole house was aroused by your aunt's shrieks and the violent ringing of my bell—for the nearest surgeon, and then proceeded to search for some traces of the murderous intruder. Mechanically I went first to Jeff's room, probably because I was astonished at not having seen his face amongst the wondering group gathered round my door. It seemed amazing that he should sleep so soundly through such a commotion. The

door of the east room (Jeff's) was open, so was the window; and *the room was empty.*

'I can never either forget or describe the sickly sensation of horror that crept into my heart as I looked round. Where was Jeff? Why had he gone so suddenly and mysteriously? Why the open window? I was all the more painfully perplexed, as the most careful examination failed to disclose any other means of exit by which the would-be assassin could have escaped. Every door was securely barred, every window except that of the east room was safely fastened. In the flower-bed underneath there were distinct tracks of a man's feet leading from the window, none whatever leading to it.

'These things made me terribly unhappy, and some suspicion of my thoughts must have crept into my countenance, for Edith divined them at once. However, she remained silent about the appearance of the man who had attempted my life, and I refrained from questioning her. At best there could be but a conjecture—the room was dark, the man disguised, and your aunt frightened. But the knife which lay upon my bed appealed with dumb but terrible force to us both. It was my pruning-knife, and that very afternoon Edith had seen me lend it to Jeff Lawson. Whether the knife had been in any way poisoned, or whether your aunt's wound had been badly dressed in the first instance, I do not know, but inflammation set in, and for weeks she was dangerously ill. For days her life was despaired of; and it was only saved at last at the expense of the brave right hand that had saved me so well from a terrible and sudden death.

'The matter made a sensation, which was something more than a nine days' wonder in our village; but as I kept my suspicions to myself, no one else ventured to express any, and Jeffrey's name was never mixed up in the matter. Indeed it somehow got circulated that he left Garrick the evening of the attempted murder, and no one contradicted it. The object of the attack, which was evidently robbery as well as murder, for every drawer and desk in my room was thoroughly ransacked, caused much wonder and discussion. It was pretty generally known that my allowance as a minor was scarcely adequate to my few simple wants. Being neither a landlord nor a prosecutor of poachers, I was not unpopular, and as far as I knew, I had not an enemy in the world. Altogether it was a most mysterious sad affair, and if in my secret heart I connected it with the new-found will of my father, and wronged any one by unjust suspicions, I hope heaven will pardon me. Appearances were strongly against one'—

'And appearances very frequently deceive, Robert,' aunt interrupted gently. 'Let us judge not, that we be not judged!'

'Heaven help the villain who cost Aunt Edith so dear, if ever I encounter him!' cried Edgar excitedly. 'I'll shew no quarter!'

'What became of Jeff Lawson, father?' Jess asked, with a stolen glance at aunt's face.

'From the night he said good-bye to us in this very room, thirty-one years ago, I have never heard of him nor from him. He disappeared in the most extraordinary manner. Doubtless he is dead; and as far as he is concerned, I have no hope of the mystery of that awful night ever being cleared up.'

'And his mother, papa?' Fred queried.

'Ah, his poor mother; she broke her heart over his disappearance, my boy. Mothers will do such things over the most worthless sons.—Well, Upton, what's the matter?'

'If you please sir, there's a gentleman wants to see you,' said our old butler, closing the door behind him, and looking mysteriously round. 'He says his business is urgent, but he won't give his name.'

'A strange gentleman, at this hour, and on such a night,' exclaimed papa, rising. 'He must be some belated traveller.—Shew him in, Upton.'

We all looked at each other, and glanced towards the door in eager nervous curiosity, as an elderly gentleman with very white hair and beard entered the room, made a courteous bow, which embraced everybody, and proceeded to unbutton an enormous travelling-cloak in which he was enveloped. For a moment or so his eyes wandered round the room, as if in search of something, and then he smiled sadly.

'You do not know me, Mr Neville,' quoth the gentleman, after what seemed an ominous silence, drawing more directly into the light of the fire, which blazed cheerily.

'I have not that pleasure sir,' papa replied, looking at our visitor more attentively.

'Ah! Yet my picture hung there once;' pointing to a vacant space amongst the portraits on the wall. 'My name is Jeffrey Lawson.'

'Jeff!' cried papa and Aunt Edith with one voice.

'Jeff!' we all echoed in amazement. Here was the sequel to the story, with a vengeance.

'You do not seem overjoyed to see me, Robert,' Mr Lawson said after another pause. 'Well, perhaps you are not to blame.—But you, Edith—after all those long years—might give me your hand.'

At that moment his eye rested on aunt's helpless right arm, and the most terribly awkward awful silence I ever witnessed ensued. Edgar was white with passion; Jess clenched her little hands defiantly; and even gentle Fred looked as if he could raise his voice and arm to avenge Aunt Edith.

Mr Lawson was the first to recover his self-possession. 'Forgive me,' he said, and there was a tremor in his voice. 'I did not know—I am sorry.' Papa remained stern and silent. I really pitied Mr Lawson, the odds were so fearfully against him. Not a single kind or encouraging glance met his eye as he looked round. However, he drew himself up a little haughtily, and continued addressing us all: 'I did you a great wrong once, Mr Neville. I have travelled many thousand miles to offer what reparation I can. That will by which I obtained five thousand pounds was a forgery. But I have come to pay it back, with interest.'

Papa bowed his head, but remained silent.

'Money was absolutely necessary then, for I had many pressing engagements to meet—my safety, my liberty, were at stake. I was desperate; but though my base trick succeeded, it was too late. Absolute ruin and disgrace stared me in the face, and I was compelled to fly like a thief in the night to escape the consequences of my folly. That night I secretly left the house, escaping by my bedroom window. Concealing all the money I had, I took passage for Australia, where by careful speculation and hard work,

I soon realised a considerable fortune. I had no desire to return to England. I formed new friends, new habits; squatter-life suited me; and so I remained year after year. But I was heartily sorry for and ashamed of the part I played about the will, and I resolved one day to try and make it square with you. Then the gold-fever broke out, and the spirit of adventure being strong in me, I resolved to go to the Diggings. I was singularly successful; but others were not so fortunate. One poor fellow who went by the name of "Down Ted" I heard frequently spoken of as singularly unlucky. One day I was surprised to receive a message from this fellow, requesting me to come and see him, as he was very ill, and had an important confession to make. I went at once, and saw at a glance that the man was dying; but imagine my surprise when, on a closer survey of his features, I recognised him to be Ted Judson, the son of your old steward—good-for-nothing, graceless vagrant Ted, who got me into almost as many scrapes as I got him out of. With the utmost difficulty, for he was dying, he told me a singular story. On the very night I left Garriek House, he tried to rob and murder me. Hearing from his father that I had a large sum of money by me, he resolved to have some of it; and entering the house in the dusk of the evening, he concealed himself behind the curtains of the corridor window, and waited till the house was all quiet; then he entered my room, and after searching in vain for the money, he seized a knife which lay on a table, and in a fit of drunken rage and disappointment, resolved to cut my throat if I did not give up my purse. Advancing to the bed where I lay sound asleep, he lifted the knife and made a slash at my throat; when, to his horror, he saw the White Lady who "walks" bending over me. Throwing down the knife, he fled in terror, and made his escape through a window he found open. In a moment, it flashed upon me that your room was mistaken for mine, and my window, which I had left open, proved the means of escape for the villain, as it had already proved the means of escape for me. I hope the timely appearance of the White Lady prevented any serious mischief?

'It did, to me,' papa said sadly; 'but the slash that missed my throat cost my sister her right hand. She was the Lady who saved me, Jeffrey!'

'I am better pleased to have this mystery cleared up than I would be to have the right hand back again, if such a thing were possible,' said aunt softly.

'The knife Judson saw on the table must have been your pruning-knife, Robert, which I asked one of the servants to return to you,' continued Mr Lawson. 'Here is Ted's written and signed confession, witnessed by a magistrate. And now, let me once more entreat your forgiveness; and as my mission is accomplished, I will not intrude any longer. I should have remembered that the Nevilles are not a race to forget or forgive!'

'Are the Lawsons, Jeff?' papa cried, advancing with outstretched hand. 'If so, I claim yours. I have done you an infinitely greater wrong than you did me. I am very sorry!'

A bright smile passed over Mr Lawson's face, altering its whole expression, as he grasped papa's hand; and I'm sure there were tears in his eyes as he bent down to kiss Aunt Edith's forehead;

and in the smiling silence that followed, while they looked into each other's eyes, all old scores were wiped out; all old sores healed and forgotten!

THE DROLL SIDE OF DUELLING.

THERE are few things however serious that have not their comic side, if one cares to look for it. The barbarous practice of duelling, fraught with tragedy though it be, is one example of a barbarous custom having its humorous side, as without further preamble, we will proceed to shew.

The old story of the Irishman who called a man out for expressing disbelief in his having seen anchovies growing on a tree, and when his opponent lay wounded on the ground, repentantly owned to suddenly remembering it was capers he meant, may be an invention, but duels have been fought for equally trivial reasons. One of the members of Louis XVIII's body-guard fought three times in one day; first, with a gentleman who had offended by looking askew at him; next, with one who had looked him hard in the face; and thirdly, with a stranger who had passed by without deigning to look at him at all.

Men disinclined to make targets of themselves in obedience to a conventional code of honour, have often got out of the difficulty by availing themselves of the right accorded to the challenged to choose the weapons. A Missouri backwoodsman daunted his antagonist by insisting upon a combat with raw hides, limited to half an hour's duration. An old whaling captain declared he would fight with harpoons or not at all, an alternative declined by his adversary. A French journalist fonder of fun than of fighting, on being challenged, accepted the cartel with: 'Of course I claim the choice of weapons. You wish to kill me; I will do my best to kill you. Good. I have in my house twenty loaves of siege-bread, which I have kept for souvenirs. We will sit down and eat against each other. One of us is sure to die.' Knowing by experience the nature of siege-bread, the challenger did not care to run the risk involved in such a contest, and like a sensible fellow, laughed, and shook hands. Equally satisfactory in its result was the very wise method adopted by two Americans, who, having fallen in love with one lady, found it necessary to settle by force of arms which should retire from the field. Having no desire to hurt one another, they concluded the matter could be decided by proving which was the better shot, by each trying his skill at a tree. The worst marksman acknowledged that if they had confronted each other in the approved way, he would have been annihilated, and left his rival to win the lady unopposed.

In another duel without danger, only one of the parties concerned was aware of the innocent character of the encounter. This was General Putnam, who being challenged by a young officer, proposed that each should sit upon a powder-keg, with a lighted fuse in the bung. As he would hear of no other terms, the General had his way. At the appointed time the belligerents took their seats; the fuses were ignited. The veteran watched the progress of the flame—as well he might—with unmoved countenance. Not so his opponent; he took intense interest in the fast-lessening match,

and when the flame got suggestively near the bung-hole, shewed his possession of the better part of valour by jumping off the keg and making for the open, till arrested by Putnam roaring out: 'Hold on, my boy; it's only onion-seed!'

With commendable discretion did some fun-loving rascals act when called upon to assist a couple of coloured gentlemen, of Monticello, Mobile, who agreeing to differ, determined to settle their differences white-man's fashion. In a very few minutes arrangements were made for bringing the affair off in the orthodox way. The seconds and surgeons stood in a grove hard by, and rifles loaded with blank-cartridge were placed in the hands of the bellicose pair. They presented a curious contrast, one being as cool as the proverbial cucumber, while the other was nervous and excited—a veritable black Bob Acres. When his eye caught the gleam of the rifle-barrel, he exclaimed: 'Look here, gemmen; dis'ere gun's too bright for me;' and tried to leave his ground, till brought to a sense of his position by an intimation from his second that if he attempted to stir he would shoot him down. Dropping his gun, the frightened fellow seized his second by the waist, and placed him between himself and the levelled weapon of the foe. The barricade quickly removed itself, and then the negro fled the scene at racing speed, followed by shouts of derision from the amused on-lookers.—When Egan and Curran met to decide their quarrel with the pistol's aid, the former complained that he might as well fire at a razor's edge as at his adversary's thin body, while he himself offered as fair a mark as a turf-stack; whereupon his ready witted foe declared he had no desire to take any undue advantage, and was willing to let his size be chalked out on Mr Egan's side, and agree that every shot outside the mark should go for nothing.

When General Shields challenged Abraham Lincoln, on account of a letter in a newspaper reflecting on the General, which Lincoln had avowed to save the real writer from the consequences; the latter having the choice of weapons, elected to fight with the broadsword. Not that he was skilled in its use, but because he had such a tremendous length of arm, combined with great muscular power, that he calculated upon being able to chop-off his adversary's head before he could treat him to a scientific thrust. Lincoln was first on the ground, and when Shields arrived, was hard at work with a hatchet clearing away the bushes. It was decided to sink a plank perpendicularly in the ground, leaving four feet of it protruding from the earth—the combatants to fight up to, but not beyond it. Shields examined the swords, and then looked doubtfully at Lincoln's arm. Noting the look, Colonel Hartin told the pair not to make fools of themselves; and like wise men, they concluded they would not; but played a game of 'old sledge,' to decide who should pay the expenses of the trip; a pleasure that fell to Shields.

Two Western editors once made fools of themselves to an unlimited extent. It came about through the editor of the *Athens Democrat* declaring in a leader that the caitiff editor of the *Athens Whig* was a bigamist; and that gentleman resenting the calumny by pulling the libeller's nose in the public street. The mayor kindly undertook to arrange for the difficulty being settled in a proper

way; and the two editors were soon ensconced, rifle in hand, behind two trees in a wood. For two mortal hours they dodged and peeped, neither caring to fire, lest by missing he should leave himself at his enemy's mercy. Then the rain came down, and the *Whig's* editor discovered it had saturated his powder. 'Is your powder wet?' shouted he to his rival.

'No,' answered the other.

'Mine's beautifully dry,' continued he of the *Whig*.

But his adversary guessing how matters were, came boldly out of cover, with his weapon ready to come to the 'present.'

'Stop!' cried the appalled man—'stop! Let's have a parley! You are a darned good fellow; suppose, instead of shooting me, we go into partnership?'

'All right,' replied the *Democrat*; and they returned home together.

Of course the editor of the *Whig* had to set himself right with his subscribers, which he did by telling them his gun was wet and wouldn't go off. To which his new partner responded in his paper with, 'No more wouldn't mine.' Mortified as he was at having 'caved in' when there was no occasion, the *Whig* man congratulated himself that at anyrate the affair of his first marriage would be hushed up; but curious to ascertain how the other came to know anything about it, he asked him: 'How did you know that I had another wife living, besides Mary-Jane?'

'Oh, you have, have you?' was the astonished answer; while the disgusted self-betrayer muttered between his teeth: 'Fool, fool! to forget he was an editor, and judge him only as a common man!'

The Athenian journalist would have had no cause to abuse himself, had he displayed the forethought of the French critic Saint-Beuve, who having to meet M. Dubois on a wet morning, appeared on the ground carrying in one hand a sixteenth-century flint-lock pistol, and in the other a nineteenth-century umbrella, which he unfurled as he took up his position. M. Dubois, backed by both seconds, protested against the umbrella, but to no purpose. Saint-Beuve said he had no objection to being killed, but decidedly objected to getting wet through; so they let him have his way, and the duel went on, till each combatant had fired four shots without damaging anybody, and all parties were satisfied, especially Saint-Beuve, who marched off without a hole either in his body or his umbrella.

THE MONTH.

SCIENCE AND ARTS.

Does oxygen exist in the sun? is a question highly interesting to astronomers and physicists. Dr Henry Draper of the United States believes that it does, being led to that conclusion by years of experiment and observation. Making use of a twenty-eight-inch silvered glass reflector, he took a large number of photographs of the spectrum of the sun. These, however, could not be understood unless they could be compared with photographs of metallic and non-metallic spectra. By means of a Gramme machine, worked by a petroleum engine of one-and-a-half horse-power, the requisite electric light, equal to five hundred standard candles, was obtained. The efficiency of

the machine may be judged of from the fact that, in combination with an induction-coil, it will give one thousand ten-inch sparks per minute. Working alternately in his study and in his laboratory, Dr Draper made a large number of the required comparisons, and found, as he thinks, support for his conclusions. At a meeting of the Royal Astronomical Society last June, he remarked: 'On the whole, it does not seem improper for me to take the ground that, having shewn by photographs that the bright lines of the oxygen spark spectrum all fall opposite bright portions of the solar spectrum, I have established the probability of the existence of oxygen in the sun.' And to convey some idea of the time and labour expended in the investigation, he made a statement of the production of electrical action that had been necessary. 'Each photograph demands an exposure of fifteen minutes, and, with preparation and development, half an hour is needed. The making of a photograph, exclusive of intermediate trials, requires, therefore, about thirty thousand ten-inch sparks; that is, thirty thousand revolutions of the bobbin of the Gramme machine. In the last three years the Gramme has made twenty million revolutions. The petroleum engine consumes a couple only of drops of oil at each stroke, producing two or three ten-inch sparks at each stroke, and yet it has used up about a hundred and fifty gallons.' Untiring, indeed, must be the patience and perseverance of him who devotes himself to scientific research. Astronomers generally do not agree with Dr Draper. We may therefore safely infer that he will not rest until he arrives at complete demonstration, or other physicists convict him of error.

Mr Maxwell Hall communicated during last session to the Royal Astronomical Society, a further instalment of his endeavour to determine whether there is a general movement of the sun and the stars, visible to us, around a central point. Some years ago, Madler, a German astronomer, from a series of calculations, placed the remote invisible centre in the Pleiades; but Mr Hall, having more elements at command, finds reason to believe that it is near the double-star ϵ of the constellation Pisces. Near, is of course a comparative term, for the central point is too far distant to be seen by human eyes; but it is something to have indicated even provisionally its latitude and longitude. The time of revolution is estimated at twenty million years, and the total attractive mass of the stars engaged in the movement, as seventy-eight million times that of the sun, while the distance of the mysterious centre is thirty-one million times the distance of the sun from the earth.

To the captain of a ship it is of prime importance to know whether the vessel is steering on her proper course or not. His first question before leaving his berth in the morning often is, 'Steward, how's her head?' and many a passenger will remember the steward's early visit to the binnacle in order to prepare his answer. Mr H. A. Severn has devised a tell-tale compass which obviates the necessity for inquiry and the trouble of going on deck, and gives the captain the information he requires even in his own cabin. An electrical apparatus connected with a compass is fitted into a small box, which may be carried to any part of the ship; two adjustable index hands are placed above the card, and these with allowance for

deviations are set to the vessel's course. Unbroken silence indicates that all is going well; but let the vessel once overpass the limits of deviation, and an electric bell rings and continues to ring until the right course is again steered. With two bells unlike in tone, one for starboard, the other for port, it would be easy to ascertain the direction of the deviation, and thus lessen to some extent the risks of navigation in crowded seas or near a coast.

The flexible shaft or drill, an instrument invented in America for delicate operations on the teeth, has been shewn to be capable of doing heavy work, such as the boring of wood and iron. It is used also in the brushing of horses and cattle, cleaning and polishing plate-glass, finishing morocco leather, and in boot-cleaning. Great is the surprise of those who for the first time see the instrument at work; not a rigid bar, but pliant as a snake. As described by a machinist, it 'leads mechanical power into the more intricate ways and remote corners heretofore only approachable by the human arm, and it is apparent that manifold applications of the flexible shaft will be made in the future that are not now thought of.'

At Pittsburg a method of burning petroleum as fuel for the heating of steam-boilers has been tried with encouraging results. Air, steam, and oil-spray are injected into a suitable fire-box, where, as is said, the spray is immediately converted into inflammable gas, yielding a bright, powerful, smokeless flame, and producing intense heat. On trial being made of the apparatus in a steamboat, it was found that in twenty minutes from the starting of the fire the safety-valve blew off steam at one hundred and twenty pounds pressure. To quote a local description: 'Here was a boat puffing through the water with no sign of smoke from her chimneys, no speck of soot in flues or fire-box, no fireman, no opening of furnace-doors, no dirt, no coal going in, and no clinkers or ashes to be seen anywhere. A turn of the hand regulated the terrible flame that seemed trying to overpower the limits of the furnace, and another turn of the hand brought the fire down to a quiet little flame, a foot or two long. . . . The space occupied by oil, as compared to an equal value of coal, is very much less, and this is gained for cargo. The wear and tear of boiler and grate-bars is less also, while the comfort of passengers is greatly enhanced. A tank of oil situated at a remote end of an ocean-going steamer would hold fuel sufficient for a double trip, and supplant the great coal-bunkers with their attendant dirt.'

An Automatic Coin Cashier has been exhibited in Philadelphia, which, according to the description, is intended to 'facilitate making change, and consists of a series of receptacles for coin of the various denominations, standing at an inclination from the perpendicular, and having at their lower ends a slide, which, when moved to the proper position, allows one piece of coin to drop out.' Each slide is marked with the denomination of the coin which it liberates, and the required amount of change can be rapidly collected.

Among odds and ends from America we notice inserted teeth for circular saws; a new insulating material for electrical purposes compounded of cork and paper-pulp; a method of propelling a boat by air instead of steam; a furnace for melting brass or steel, which can be tilted, and the

molten metal poured out without disturbing the fire or the crucibles; a new lamp (the Hitchcock lamp), which by means of peculiar mechanism, impels a current of air into the flame, supplies oil to the wick, requires no chimney, and will burn fat or greasy oils, animal or vegetable; a steam-engine of one-sixth horse-power; and a boring-machine which bores a square hole. For detailed information upon the foregoing American items, we would refer our readers to the Secretary of the Franklin Institute, Philadelphia, U.S.

A project for an aqueduct twenty-seven miles long to supply Philadelphia with water, is under discussion. The source is at such an elevation that the distributing reservoir, to contain a billion gallons, would be two hundred and forty feet above the city datum. There will be a number of tunnels; but these, in the opinion of the devising engineer, will cost less than an aqueduct of masonry. The Croton Aqueduct, forty miles long, by which New York is supplied with water, cost eight million five hundred and seventy-five thousand dollars.

We hear that a miller in France has invented a steam-engine which heats itself; but as yet we have no particulars. A diving-boat in which work can be carried on under water at a depth of five mètres, and in turbulent currents, has been described at a meeting of the Société de Physique, Paris; and from the same city comes word of the *densimeter*, an instrument for indicating the density of solid bodies. It is quick in its operation, and sufficiently accurate for all ordinary industrial purposes.

The discovery by a German chemist, which we mentioned some time since, that indigo can be produced in the laboratory by chemical operations, remains for the time undeveloped, no means having yet been devised for an economical application thereof. The discovery is, however, so important that its conversion at some time into a process of manufacture may be confidently expected. Twenty-five years ago, no one imagined that alizarin would one day be manufactured in quantities for the use of dyers, valued at nearly a million and a half sterling annually. Yet such is the fact; and the imports of madder have fallen from three hundred and five thousand hundredweights to less than thirty-three thousand hundredweights in the year. This success, in the words of Mr Perkin, F.R.S., is 'the fruit of scientific researches in organic chemistry, conducted mostly from a scientific point of view; and while this industry has made such great progress, it has, in its turn, acted as a handmaid to chemical science, by placing at the disposal of chemists products which otherwise could not have been obtained; and thus an amount of research has been conducted through it so extensive that it is difficult to realise, and this may before long produce practical fruit to an extent we have no conception of.' Among the results thus predicated may be the manufacture of artificial indigo.

Mr Cosmo Newbery, after examination of the building-stones used in Melbourne, found that the soft kinds are most liable to decay during the summer months (December—February); while those that grow hard on exposure harden most in the same period. And further, that taking two portions of the same stone, saturating one part with water, and leaving the other dry, the wet

stone hardens first, the hardening taking place from the outside inwards. On analysis, the hardened surfaces shewed an excess of silica and distinct traces of ammonia. Different kinds of freestone were then treated with ammonia: some were hardened, others disintegrated. In the former, the cementing material between the sand-grains is not softened, but changes from a dull opaque or white clayey cement to a vitreous or quartz-like material, and eventually, to a dense quartzite. 'I have to a limited extent,' says Mr Newbery, 'succeeded in changing clayey sandstones to hard silicious sandstones by causing them to absorb ammoniacal solutions in such a manner that the liquid was absorbed at one end of the stone and evaporated at the other, and obtained an outer surface hard and silicious like that found in nature.'

Dr Royston-Pigott, F.R.S., comes to the aid of microscopists with his 'Researches in High Power Definition,' in which, dealing with difficulties of microscopic investigation, he shews what can be done in the observation of objects having an individual diameter varying between the 1-80,000th and the 1-200,000th of an inch. The difficulties as stated are 'principally created by overlapping images, due partly to residuary aberrations spherical and chromatic; partly to the effects of diffraction, caused by brilliant illuminations of spurious disks of light; partly to the constant development of *eidola*, or false images.' Through these and other difficulties, the doctor offers guidance, and gives examples and methods 'of producing transcendent definition in cases found hopeless by a numerous body of observers.'

A few months ago, at the instance of the Royal Institute of British Architects, a conference was held in London on the subject of lightning-conductors, and the best means of protecting buildings from lightning-strokes. Meetings have been held, at which much information was gathered; but before proceeding to formulate what is already known, with a view to draw up a general code of rules for the erection of lightning-conductors, the delegates ask for more information, and on special particulars—namely, whether buildings struck by lightning had or had not conductors—of what size, shape and construction were the conductors—how attached to the building, or connected with the earth, and so forth. Persons in any part of the kingdom possessed of trustworthy information on any of these points would aid the work of the conference by communicating the particulars to their secretary, Mr G. J. Symons, 30 Great George Street, London, S.W., where a complete statement of the facts most in request may be obtained.

An account is given in the Journal of the Scottish Meteorological Society of Mr Cruickshank's twenty-one years of observations On the extreme Limits of View along the Earth's Surface. The conclusions arrived at, being based on so long a term of investigation, deserve consideration. They are: That 'the mean daily distance seen is only 25 miles—the mean number of days in the year on which a distance of 50 miles can be seen is 90—the greatest mean daily distance seen increases for each month from January to July, and then decreases again from July to January, correspondently with the monthly decrease and increase in the humidity of the air—and last, there is no regular relation between the monthly varia-

tion in the mean distance seen and the mean monthly amount of cloud in the sky.'

It was generally supposed that the long-continued severity of last winter would be fatal to insect life; but we learn from an entomologist's communication to the *Scottish Naturalist* that 'moths and butterflies were more numerous during the summer than in the past few years,' that they appeared a week earlier than in 1878, and from two to three weeks earlier than in 1877, and that larvæ which bury themselves survive the hardest frosts. It may also be noted that 'clouds' of certain species of butterfly, such as the Painted Lady, were observed in various parts of Great Britain. These are interesting facts for naturalists.

A work printed at the public cost deserves a word of notice. It is a catalogue of the very large collection of Persian manuscripts in the British Museum, prepared by Dr Rieu, whose skill and painstaking in dealing with such a mass of historical material are greatly to be commended. So well, we are told, has he done his work, 'that the mere perusal of the catalogue itself affords an admirable bird's-eye view of the history of the East;' and it may compare favourably with any similar work undertaken by the ablest scholars of Europe and published by foreign governments.

Intelligent readers will have much satisfaction in the fact that at last an arrangement has been come to for the uniform spelling of Indian proper names. Lists of names are to be furnished by the Indian government to the Royal Geographical Society: from these lists, a general list will be drawn up, and after revision by competent authorities, will be 'finally adopted as the Society's official guide for spelling.' Hitherto the anomalies have been bewildering; as Karáchi for Kurrachee, Hummums for Hamams, and a hundred others almost as astonishing as the corruption by the British soldiers more than a hundred years ago of *Surajah Dowlah* into *Sir Richard Dowler*! It is a further satisfaction to learn that 'the same systematic treatment will be gradually extended to the spelling of proper names of all countries.'

We are informed that in our notice of the blasting of coal in mines by the use of compressed air (*ante* 622), the name of Mr Ernst Reuss, as the designer of the drill apparatus, should have been introduced. It may be that there are rival claims; but in any case the application is so important that it deserves to be fairly tried on its merits, and should it lead ultimately, by force of law or otherwise, to the setting aside of the use of gunpowder in mines, the mining folk will be relieved from much of the fearful risk to which they are at present exposed. We gladly assist in making the subject known, for it is one that should interest all classes of society.

Considering that prevention of colliery explosions, with their appalling consequences, is a paramount duty, the owners of mines are reminded that in the United States the telephone is used for signalling in mines with marked success. Instantaneous communications among all parts of a mine could hardly fail to render important service in a system of prevention. The Minister for Mines, New South Wales, in his last annual Report, strongly recommends it to the attention of the miners of that colony.

Cases at times occur in which it is important to have proof that a letter has been posted, and

suggestions have been made to shew in what way the evidence could be obtained. Mr Clifford Eakell (8 Grosvenor Street, W.) has published a pamphlet on the subject, with a specimen of the 'Proof of Posting' which he recommends, and pointing out the advantages that would follow were it generally taken into use. The proofs would be sold by the Post-office at one farthing each. The sender of a letter, book, packet, telegram, or newspaper would write any one of these descriptive terms in the blank on the proof, and write underneath the address written on the letter or packet; the proof then being stamped by the Post-office clerk, would be good evidence that a certain letter, book, packet, telegram, or newspaper had been posted. With this evidence in possession, it is obvious that inquiries for missing articles would be greatly facilitated; and we may fairly assume that persons employed to post letters would, knowing that they must carry back stamped proofs to their employers, discharge their duty honestly. The scheme appears to be simple: the best that can be desired is that it shall be freely discussed as a question between the public and the Post-office.

From a circular which we have received from the Secretary of the Mission to the Fallen Women of London—a truly beneficent institution—we learn that through the instrumentality of the missionaries more than ten thousand young women have been reached. Some of these have been placed in Homes, whilst others have been restored to their friends, or provided with situations. We also learn that though a small proportion have disappointed the hopes which had been formed concerning them, of many the most encouraging accounts have been received. The Mission, which is entirely wrought through female agency, is at present greatly in need of funds to enable it to carry on its philanthropic work. And such being the case, it will give us much pleasure to receive and acknowledge any sums that may be intrusted to our care for transmission to the proper quarter.—ED.

NOTES ON THE IVY.

FROM the earliest times the ivy has been the theme of poets. As Washington Irving has well said: 'The ivy winds its rich foliage about the Gothic arch and mouldering tower, gratefully repaying their support by clasping together the tottering remains, and as it were embalming them in a verdure.' The presence of this lovely creeper clinging about the ruined walls 'of cell and chapel and refectory,' does much to enhance the picturesque appearance of these stony relics of the past. The pretty foliage with its glossy hue, creeping over the gray old stones, and twining lovingly over broken windows and shattered tracery, is a sad but beautiful picture—the vigorous life contrasted with the decayed grandeur of the silent and deserted ruin, rich alone in the memories of bygone days. A child with its sunny hair, climbing on the knees of an old man whose locks are hoar with the winter of life, forms no greater contrast than the green ivy clinging to the buttresses of an old ruin.

More picturesque than useful, the ivy has, however, some reputed properties worth mentioning. The old physicians considered that a decoction

of its leaves was an excellent sudorific, and further that its berries were a preventive against the plague. But Pliny gives the ivy credit for having a far more useful quality. If he is to be relied upon, its berries taken before wine, have the effect of preventing intoxication. This notion most probably has some connection with the Bacchanalian fillet of ancient times, as well as with the more modern custom of using an ivy bough as the sign of a tavern. The plant is called the Bacchus-weed in old books of poems; for it seems to have constantly been associated with ale-houses and drinking. In the south of Europe and North Africa, the gum which exudes from the stem is considered to be a good remedy for toothache. But the use of this gum is probably attended with more satisfactory results as a bait for fish; for an old angler named Walker maintains that it proves a very attractive bait to the finny tribe; and we have ourselves heard that worms, steeped in 'ivy oil,' form a tempting lure, but are unable to give directions for its preparation.

When the stems of the ivy grow to a great size, wood is formed; but it is not of much value. Cut into thin slices it has been used in some places for filtering liquids; and the wood of the roots has been manufactured into knife-strops; but it is seldom found of sufficient size to be used for any other purpose. However, it is quite possible to carve or turn the large stems of the ivy, as it takes a polish which brings out very clearly the curious zigzag black lines which seem to be a peculiar characteristic of the wood. The writer has a pair of richly marked candlesticks turned from some ivy which grew round an aged elm.

Fortunately for lovers of ivy, it will grow almost anywhere; consequently many buildings can have their native ugliness most effectually concealed by the luxuriant foliage. But it is much to be regretted that those who love ivy and appreciate its decorative qualities are not more numerous. The comparatively small number of houses and walls covered with this cheap and unrivalled decoration plainly points to the fact that there are still many people who labour under the delusion that ivy renders a house damp. This is a common complaint brought against the plant; but a little reflection will shew, that so far from rendering a building damp, a rich growth of ivy-leaves is the best protection against wet. Nothing could form a more effective protection from the rain than the glossy surface and close growth of the plant. Unlike almost every other kind of creeper, it is always in leaf, always beautiful, and always a certain protection against wet. Moreover, ivy will often grow in situations where no other creeper can live. It seems able to thrive in secluded spots, where neither light nor sunshine can penetrate, and thus its value as a hardy ever-green is materially increased.

This property of adapting itself to circumstances is most strikingly illustrated by an incident related by Miss Strickland. The body of Catharine Parr, buried at Sudley, was disinterred, through curiosity, on several occasions. The last time the coffin was opened, 'it was discovered that a wreath of ivy had entwined itself round the temples of the royal corpse. A berry had fallen there at the time of the previous exhumation, taken root, and then silently from day to day woven itself into this green sepulchral coronal.'

'MY HEROINE'

I'll introduce you to a girl I know.

'Pretty?' you ask.

Well, I'll attempt to sketch her portrait, though
No easy task.

I fear, however, you'll pronounce her 'slow,'
For nowadays

We vote a dash of fastness all the go,
(Excuse the phrase).

She's not accomplished—no, indeed, poor dear.

I dare assert

She does not know the latest slang—I fear

She's not a flirt.

She could not name the winner of the Oaks,

She does not bet;

I'm pretty sure she never even smokes

A cigarette.

A beauty? Well, she's not considered such—

You girls know best.

Her dearest friends do not abuse her *much*,

And that's a test.

Perhaps she has not Mrs L——y's eyes,

Or rose-leaf skin,

But still so sweet a face to criticise

Were downright sin.

She does not scream when skittish Polly rears,

Not she—and wait,

'Twould do you good to see the way she clears

A five-barred gate.

She cannot sing bravura runs and shakes—

She does not shine

When seated at 'a grand'—but then her *cakes*

Are just divine.

With high-heeled boots she cares not to distort

Her pretty feet—

Her lilies and her roses were not bought

In Regent Street

And still more shocking, I regret to state,

Her ~~want~~ of taste;

She cannot be induced to cultivate

A wasp-like waist.

You would not in her hair a vestige find

Of 'golden' tinge;

She wears it in a simple knot behind—

No trace of 'fringe.'

Such pretty hair! so lustrous and so long—

A modest brown.

'False, I daresay! Nay, ma'am, for once you're
wrong;

I've seen it down.

You horrid man! I've told you scores of times,

I won't again

Be made the subject of your stupid rhymes;

But all in vain.

'Tis quite too bad of you!—When next you err,

Look out for tears.

Or no; I'll prove you've wed a vixen, sir!

And box your ears.

Ah! then you'll change the burden of your song—

A truce to praise.

'Unruly wives' will be your theme—you'll long

For bachelor days.

You'll gravely say that matrimony brings

Domestic strife,

And add no end of nasty, spiteful things

About your wife.

A NEW HEALTH-RESORT.

DAVOS, or Davos-Platz, as it is sometimes called, is a new and very peculiar health-resort high up among the mountains of Switzerland. One often hears about it without a clear understanding of its character. Our curiosity being excited, we happily fell in with a gentleman who had been several times at Davos-Platz, and could give every requisite information on the subject. What he told us corroborates the statements made in one or two small works which profess to be a guide to invalids. Our present purpose is to make known what is confidently asserted respecting this out-of-the-way wintering-place for health-seekers.

The common idea entertained of a lofty hill-residence is that, from its exposure, it must be insufferably cold and disgusting in winter. There will be hideous storms of wind, rain, and snow. The ground will be plashy and wet. For warmth, you will have to sit constantly near a fire. Anything like comfort is out of the question. To go to such a place for the sake of health is to fly in the face of all experience, and little better than madness. Our own notions corresponded with ideas of this kind. We had frequently wintered at a charming spot in the Riviera, where at mid-winter are seen groves of orange and lemon trees dotted over with their yellow fruit in endless succession, and where the weather in December and January has usually quite a summery feeling. Surely, to persons of a delicate constitution, nothing as winter-quarters could be better than this? The conclusion so formed was perhaps hasty. Allowing for specialties, there may be two good things differing materially from each other.

We are all apt to form opinions on a narrow experience, and fail to recognise that there is no general rule for condemning places raised thousands of feet above the sea-level. In the torrid climate of India, the loftily situated residences on the Himalaya Mountains excel as pleasurable health-resorts. In our own mountainous country,

the real drawbacks in the climate as concerns invalids are damp and changeableness, to which, in all places near towns, may be added its contamination with soot, coal-smoke, dust, and a variety of foul odours. Comparatively few are privileged to breathe pure air. The greater number of people are inhaling an atmosphere partly composed of the breath which has done duty in the lungs of their neighbours. They have air at second-hand, or it may be third or fourth hand. Some for the sake of mutual warmth and convenience, gulp in air loaded with perhaps twenty per cent. of impurities. Public authorities are becoming quite aware of these deadly atmospheric conditions in towns, and are doing all they can to provide a remedy by substituting wide open streets for foul narrow lanes, and by various sanitary regulations.

There is one thing which neither magistrates nor doctors can set to rights, and that is the English climate, which has latterly become a queer jumble of the old-fashioned seasons, all mixed up in a way that defies calculation, and which science does not seem to be able to explain. Whether spring, summer, autumn, and winter will ever come round again as admiringly depicted by Thomson a hundred and fifty years ago, no one can tell. Ordinary health-seekers with money in their pocket are able to shift about, a week here and a month there in the so-called summer months, whereby they contrive to rub on in spite of wind and weather, always hoping that things will be better next year. It is a very different matter with those who have the misfortune to be liable to complaints in the lungs or in the air-tubes, known as consumption, bronchitis, and so forth. For them the sudden atmospheric changes, in which cold moist air performs a principal part, are extremely dangerous, and often prove fatal in spite of every precaution that can be taken.

It is not the cold, but the damp, that is to be dreaded. The cold in a Canadian winter is enjoyable and harmless, because it is a dry cold, and the air is calm. The killing thing with us is damp associated with cold. There are some

places in Great Britain where the air is drier than in others, but these are exceptional. Persons of a robust constitution do not usually experience any annoyance from the damp, and would perhaps laugh at the idea of being injured. Those liable to suffer are the aged and the infirm, who are not strictly on their guard. A momentary indiscretion may finish them. The inhaling of a single breath in stepping over the door in a cold damp day, especially after sunset, is apt to carry them off. Newspaper obituaries present melancholy instances of sudden deaths from this cause. It would almost seem as if the practice of going out to ridiculously late dinners had been contrived in the interest of undertakers and gravediggers.

These few observations bring us to the subject of Davos. The climate of that health-resort is said to be entirely different from that of the British islands, or of the wintering-places on the Mediterranean; the leading peculiarities in the air being exceeding dryness and lightness. The worst thing that can be said of this Swiss mountain retreat is the difficulty of getting to it, though in these days of railway transit this objection does not amount to much. The chosen route to reach it from England is by way of Paris, Basle, and Zurich; then to Landquart, on the Zurich and Coire line of railway. At Landquart, diligences or hired carriages take the traveller to a certain height up the mountains, after which he may possibly be carried forward by carriages sledge-fashion. The time on the road from Landquart is seven and a half hours. At the ridge of Davos-Kulm, the first glimpse is obtained of the green pastoral valley in which the village of Davos is situated. There are other routes than that just mentioned. For all needful particulars we must refer to the handy guide, 'Davos-Platz, a new Alpine Resort for Sick and Sound in Summer and Winter, by one who knows it well' (Stanford, London, 1878). Consisting of only a mere hamlet a few years ago, Davos now embraces six or eight hotels, twenty to thirty villas and chalets, and shops, for the accommodation of strangers. The hotels act as pensions or boarding-houses, at a fixed rate per diem. Some of the villas ready furnished may be hired for the season. The village has seven or eight doctors, and religious services are conducted by clergymen of different denominations. There are daily posts and parcel expresses. Letters and newspapers from London are delivered on the third day. Telegraphic communication is established, but messages are costly. German is the native language, but French and English are spoken at the hotels. Literature being scarce, visitors should bring books with them.

The height of Davos above the level of the sea is five thousand one hundred and five feet. As this is six hundred and sixty-nine feet higher than the top of Ben Nevis, one is apt to have an appalling idea of the cold and stormy weather to be experienced. But, as already stated, altitude is not a safe criterion in judging of climate. Davos

is about ten degrees farther south than Ben Nevis. It is not an exposed mountain-top, but is well sheltered by heights from fierce gales of wind. Both from geological formation and distance from the sea, the climate is singularly dry. The great elevation of course gives lightness. That is a matter of immense importance to certain classes of invalids.

Mr John Mackenzie, the gentleman above hinted at as having given us some information on the subject, has in addition furnished the following account of his personal experiences:

'Having,' he says, 'been a great sufferer for many years from chronic dyspepsia, I tried to get relief in various places in England and Scotland; sometimes reaping more benefit in one place than another, but always in the doctor's hands, living for months at a time on farinaceous food, visiting hydropathic establishments, taking the usual course of baths, and following the regulations prescribed in these places. The only benefit I received was temporary, for as soon as I returned to the usual routine of everyday life in Edinburgh, all the old symptoms came back. About the end of the summer of 1876, while considering where I should spend the winter, I heard something of the wonderful hygienic properties of the air at Davos, in Switzerland. I wrote at once to Herr J. Coester, proprietor of the Hotel Belvidere at Davos, and received so satisfactory a reply, that I resolved to winter there, and left Scotland on the 1st November, accompanied by my wife and daughter.

'I chose the route via Dover, Calais, Paris, Basle, Zurich, to Landquart, which terminates the railway part of the journey; from thence we proceeded by diligence on the following morning as far as Klosters, which terminates the picturesque valley of the Prättigau. From Klosters the journey in winter is performed by one-horse open sledges; but there is always the large postal diligence, divested of its wheels to form a sledge, for delicate visitors, seats for which can be secured by telegraphing a day or two beforehand to the post-office. We had not applied for seats, so had to content ourselves with one of the open sledges, of which there are always a sufficient number. On this occasion there were ten; and the effect of these in single file winding up the steep roads and round the sides of the mountains, accompanied by the cracking of whips and the peculiar cries of the drivers, was very novel and striking.

'The greater part of the journey from Klosters to Davos is through a forest of stately pines; and in many parts the gradients are very steep, until the Davos-Kulm is reached, when the road descends through a belt of pine-forest into the Davos valley. When the lofty mountain-ranges which inclose this Alpine retreat come prominently into view, the whole scene forms a grand panorama of mountain and valley scenery, with the Landwasser flowing rapidly onwards from the little placid lake which forms a striking object at the base of the lofty pine-clad Seehorn, situated at the north-east end of the valley; while the south-west end is closed in by the high rugged-peaked Tinzehorn, about nine thousand feet above sea-level.

'Before noticing the usual routine of daily life amongst the majority of the visitors, it may interest those who have not been to Davos to know a little of the usual kind of weather which prevails during the winter months. All the way

from Landquart to Davos the weather had been remarkably mild, with bright sunshine, and an all but cloudless sky, although the winter season had fairly set in (13th November). From the 13th to 18th inclusive, brilliant sunshine, with one of the deepest of blue skies; followed, however, by a change to sleet and snow, which continued for two days, succeeded by frost. From 24th to 26th, cloudy; 27th to 30th, six degrees of frost during the night; and on 1st December, eight degrees of frost during the night; while during the day the heat was like a fine summer's day in Scotland. During the whole of December the weather may be set down thus: Two exquisitely fine days for every three more or less overcast, which, notwithstanding, would be considered here fairly fine days, the air, although cold, being free from moisture. It is not uncommon during the winter to have a fortnight's continuance of the most glorious weather that can be experienced in the most favoured climate in Europe, the blazing sun, in which few can venture out without sun-umbrellas, giving the impression rather of a tropical than an Alpine climate, which idea is only dispelled by seeing the whole surroundings covered with dry crisp snow. Even during snowy days, patients in moderate health are to be seen taking their usual outdoor exercise, such as walking, sleighing, skating, &c.; the snow, from its dryness, appearing to fall off them as harmlessly, to use a homely expression, as water off a duck's back. The most striking features of this climate are its extreme dryness and absence of wind; giving at once a healthy tone to the whole system, provoking a keen appetite, and imparting a vigour and buoyancy of spirits that are often too apt to lead new arrivals to fancy that their ailments have entirely left them, and not unfrequently lead the incautious to overtax their strength; thus undoing the benefit they had gained. This is an evil that cannot be too carefully guarded against.

'There are now plenty of interesting walks in the valley and along the lower slopes, where daily exercise can be taken without ascending the mountains, until the visitors get somewhat acclimatised.

'The hotels and *pensions* are all situated on the north side of the valley, and have the full benefit of the sun, and to most of the hotels are attached extensive verandahs, favourably placed; these are much frequented by invalids, as they form a protection alike from sun and snow.

'The hotels and *pensions* are all most substantially built, with great thickness both of outer and inner walls, one measured being found over three feet at the ground-floor, slightly diminishing towards the upper floor; and all are provided with double windows. This substantial mode of building will readily explain how it is that the houses in these high altitudes are so easily kept warm and comfortable. The usual cylindrical porcelain stoves, so general over most of the German states, are now in use in all the hotels at Davos. In the public rooms the temperature is seldom below 60° Fahr.; and this warmth is so thoroughly diffused through the building, the usual risks from draughts and change of temperature are rarely experienced even by the most delicate.

'Davos can now boast of numerous shops and

stores, where everything of a useful as well as ornamental description can be procured. There is one good chemist's shop, and a second expected to open this season, good grocery and provision shops, wine-merchants', bazaars, good tailoring, dress-making, and millinery establishments; indeed every useful craft is fully represented, including the boot and shoe making, which is one of the specialities of Swiss productions. This year two educational establishments have been added; shewing the progress in development of this village, and the energy displayed by the medical authorities and hotel proprietors in endeavouring to render Davos not only a health-resort, but a place where delicate parents can be accompanied by their children with the assurance that their studies need not be neglected. The only want experienced by the English-speaking visitors is a comfortable reading-room or club with a moderate supply of useful books, periodicals, magazines, and newspapers, the only circulating library there at present being incomplete in this respect. The introduction of such an institution would be hailed as a great boon by all visitors, and to any enterprising person would no doubt prove remunerative.

'Nor are the spiritual wants of the visitors overlooked. At the present moment, active efforts are being made to raise subscriptions for building a small Episcopal church. Hitherto, divine service has been held in one of the large rooms of the Belvidere Hotel, conducted by clergymen appointed by the Colonial and Continental Church Society. This short account of my experiences would be incomplete without expressing my appreciation of the attention and comforts we met with during two winters' stay at the Hotel Belvidere. This hotel was built for English visitors; and from the fact of the proprietor, a German, speaking English fluently, and having a knowledge of English tastes and habits, accommodation there is, by many, eagerly sought for, and it is therefore desirable to secure rooms before the season commences. A large addition has during the past summer been made, increasing the accommodation by about double.

'From the increasing interest evinced by many of the highest authorities in the medical profession in England and Scotland, with many of whom Dr Ruedi, the only English-speaking doctor in Davos, is in frequent communication, this Alpine retreat is destined ere long to become one of the foremost of the numerous health-stations on the continent for the cure of those diseases that formerly a southern climate, such as the south of France, the Riviera, or Italy, was considered better fitted for; for it is now demonstrated that in nearly all phases of consumption in its early stages, hemorrhage, dyspepsia, nervous derangement, prostration from overwork either physical or mental, Davos possesses advantages over these, not only in the peculiar dryness and invigorating properties of its atmosphere, but from its sheltered position, and consequent immunity from winds and other atmospheric disturbances which more or less affect every other part of Europe. Although the southern climate is perhaps equally favourable for consumptive patients, it lacks the great advantage of an Alpine climate in not bracing up and invigorating the system, thereby greatly increasing the danger of returning to our variable climate.

'Numerous cases might be given, did our space permit, of complete and partial cure of consumptive patients, and of the great benefit that has been derived by nearly all who have wintered in Davos. The most delicate need not hesitate to winter there, as the comfort of patients is so carefully and efficiently provided for, and every luxury readily obtainable. Hundreds each autumn arriving in Davos with comparatively shattered constitutions, return to their homes in the spring either completely cured, or at anyrate with invigorated health and spirits; all testifying to the pleasure of a winter residence in this charming retreat, not only from its wonderful salutary effects, but from the pleasant intercourse with the residents and the kindly feeling of their fellow-visitors.'

We cannot conclude our notice of Davos without an allusion to some painful circumstances lately developed in connection with the residence of strangers at Swiss hotels. We specially refer in the first place to the gross incivility, with unprovoked assault, by the landlord of a hotel on the top of the Righi; and secondly, to the shameful persecution of a Russian lady of rank and her son by the landlord of a hotel in Uri—both cases being reported by the London press as a warning to travellers. To make the matter worse, it does not appear that the Swiss police or judicial authorities do anything to check these unjustifiable barbarities. We have likewise heard of very arbitrary proceedings on the part of the Swiss postal authorities towards strangers. We cannot say that within our own experience while travelling in Switzerland we had ever the misfortune to experience any incivilities from hotel-keepers, or others. The circumstances just mentioned, however, would shew the necessity for visitors at hotels in that country being on their guard. Perhaps, in case of a lengthened residence, it would be safer for them to select hotels of which the proprietors are Germans or French.

W. C.

A SHADOWY STORY.

A TALE OF THE IRISH REBELLION OF '98.

IN FOUR CHAPTERS.—CHAPTER I.

THE terrific outbreak in Ireland known as the rebellion of '98, seems to have attracted less attention from the students of literature than many other events of importance in our national history. Not only are the tales in connection therewith scanty; but it may be doubted, with all our spread of education, if an average school boy or girl could give anything like a connected or distinct account of this crisis, or could name a volume containing a full history of it. It is almost certain that these school-boys and school-girls would be found far better posted up about the Spanish Armada or the wars of Charles I. But for all that, it was a terrific outbreak, as we have said, and few countries have passed through greater trials than did England and Ireland then; and while anything at all bearing on politics or faction is utterly foreign to our story, yet the reader will pardon us for saying, and agree with us when we say it, that so fierce and sanguinary was the

struggle, so bitter the passions aroused on both sides, that so far from wondering at the jealousy which has certainly existed between the two nations until this day, it redounds highly to the honour of both, and speaks much for the intrinsic goodness of heart of both, that so much has been forgotten and forgiven.

The great struggle was over; the rebellion was crushed; all knew that whatever chance there might be of armed resistance in the future, it was hopeless now. The guerrilla-like strife which for several years disturbed various parts, was but the strife of desperate outlaws, and the Whiteboys and Rockites were only dangerous to individuals. The search for those concerned in the revolt was yet pursued, and martial law prevailed—or what was called martial law, which seemed to consist chiefly in the absence of all law, and involved absolute submission to the will of the nearest officer, or—if he were very scrupulous—to that of the most active magistrate in the neighbourhood who worked in concord with him. In every village in the disturbed districts, soldiers were quartered; and as money was freely spent, plenty of informers were found to betray the plans of their friends and the hiding-places of the fugitives. Some of the latter, however, appeared to possess charmed lives, and could not be captured. These were but few, it is true; yet on this foundation a sort of belief in the fidelity of the Irish populace has been reared, which has obtained a credence perfectly astonishing, when we recall the indisputable fact that every movement in Ireland has been accompanied with the betrayal of its chiefs, from the times of Lord Fitzgerald down to the latest Fenian scare.

At the village of Knock-na-boreen—to give it its full title; but commonly called, as it will be called here, Boreen—which was about fifteen miles from a small seaport, and situated in a 'proclaimed' district, a detachment of military was quartered, consisting of one officer of the regulars, with half a score of men from his own regiment, and some twenty militia; and owing to the scarcity of officers, his next assistant was his sergeant-major, a very steady trustworthy man. With the easy ways of such times, and the entire disregard of everything like private rights or feelings, this officer—Lieutenant John Westbury—was directed to make the house of one Mr Decroy his headquarters. This was not bad for the officer, as there was nothing in the shape of an inn to be found at Boreen beyond a couple of the poorest shebeen houses; but it was particularly unpalatable to the family on which he was thrust, as Mr Bernard Decroy was alleged to have taken a part in the rebellion, and to have fought more than once against the English troops. At anyrate he was a fugitive—it was commonly supposed that he had escaped to France—and a reward was offered for his apprehension. It will easily be imagined that an officer in the position of Lieutenant Westbury was not very warmly welcomed in the disaffected districts. Fear alone restrained the inhabitants from open violence; but the looks of all, women as well as men—the women perhaps even more than the men—warned him how little good-will was felt towards him by his unwilling hosts; and so it was in this case.

Mrs Decroy remained at the house with her elder daughter, a widow with two young children, and an unmarried daughter. There was also a son, but he was a surgeon in the Turkish service. When Lieutenant Westbury introduced himself with a brief apology for his intrusion, he felt that it would puzzle the best judges to decide whether Madam—as the country people called the old lady—or Mrs Claridge the widow, or Miss Kate Decroy, looked coldest upon him. There was no help for it, however, and they were obliged even to tolerate him at dinner, lest he should make an unfavourable report of them, and cause the government to hold them in still greater suspicion; quite an undesirable aggravation, as they were already ranked with the thoroughly disaffected. It was well for the inmates of Boreen House that Lieutenant Westbury was a quiet, grave, and kindly man; and in spite of his bearing a scarcely healed wound from a rebel pike, and in spite of his having a reputation for alertness and bravery, he knew how to make allowance for the feelings of those who had lost in the strife, and for the still keener feelings of their kith and kin. He was not the first officer who had entered the doors of Boreen House; but he certainly was the first who had ever thought it needful to offer a word of apology or regret at being compelled to intrude upon the family. Thus he had produced a good impression on his first arrival, although he was not aware of it.

At all hours of the day and at all hours of the night, mounted messengers were arriving and departing, so that at first the Lieutenant and his man Friday the sergeant-major, were much employed in receiving and writing reports; and although this had quieted down a little, there was still a sufficiency of such business. These patrols or messengers it need hardly be said were strangers; for there was no cavalry at Boreen, and the small party there served to act as an intermediate station between the larger towns and to scour the immediate neighbourhood. Although this latter was bleak and bare enough, and although there was some broken and rather hilly ground there, it was yet devoid of anything like woods or extensive mountains which could afford hiding-places to any large number of men.

Upon a certain night a horseman rode in with tidings which roused the Lieutenant, and sent off the whole force—save a small reserve in charge of a corporal—through a pelting rain, away out on the moors; whence they returned wet, weary, and splashed with mud from head to foot, about ten o'clock on the next day. The coldness which marked the slight intercourse unavoidably held between Westbury and his hosts, prevented the slightest inquiry on their part or explanation on his, had he felt himself at liberty to give one. But it was very well known in the village, and as a matter of course must have been known at the House, that the military had been out co-operating with other detachments, in the hope of surprising some criminals or patriots—the terms were exchangeable; and there was a vague rumour that Squire Decroy had not escaped to France after all, but was expected to be among the prisoners.

Lieutenant Westbury was evidently dull and weary at his post. Being a temperate man, he had not one very obvious resource too often sought by soldiers, and civilians also, in those days. No

library, no club, no society indeed, was there in Boreen; and, as explained, his attempts at intimacy with the other members of the House were most unsuccessful. Even the plan which almost uniformly succeeds failed in this instance, and although he made presents to the children, and sought to be friendly with them, he failed to conciliate their relatives; and the little book he gave to Miss Norah, and the puzzle he gave to Master Bryan, were each returned to him with thanks; and after this he felt the case was hopeless. It was soon after the expedition referred to, that Westbury returning from the village about twilight, and finding the hall door open, entered and saw Miss Kate talking to a woman of very poor appearance. She might have been a beggar, so tattered and threadbare was her raiment, yet she did not impress the Lieutenant as being a mendicant.

'I am very sorry, Biddy,' said Miss Kate, moving with a slight bow, to allow the soldier to pass—'I am very sorry to send you away like this; but I do not think we have a penny in the House. The times are almost as bad with us as with yourselves. But come round in the morning, and our letters may bring us some remittances.'

She had spoken so openly that there was no reason whatever for any pretence on Westbury's side of not having heard her; so pausing, with a slight bow on his part, and a quiet smile—his smile was always quiet and grave—he said: 'I trust, Miss Decroy, you will pardon me if I express a wish to prevent an incident which I am sure will annoy you. My purse is at the service of this poor woman, if you wish her to be relieved.'

'You are very kind, or no doubt mean to be so, sir,' said the girl haughtily and coldly; 'but Biddy can wait until the morning, and you, perhaps, would be less inclined to assist her, if you knew who she was.'

'I hardly think that would make any difference,' said the officer. 'As it is, I do not care who she may be, and merely wish to enable you'—

'The fact is,' said Kate Decroy, with dryness in her tone, 'her husband was a rebel, who was very properly shot by our gallant soldiers in the skirmish at the Bog of Drome; and having four children, all infants, Biddy is as badly off as she deserves to be—for she is a rebel too.'

'I do not war with women and helpless children, Miss Decroy,' said the soldier, and the colour mounting to his cheek, shewed he felt the taunt in the young lady's words. 'She is in distress; you pity her'—

'I believe you speak the truth there,' said the girl, colouring in her turn, as she replied to the first part of his speech. The officer was fair and Saxon, although somewhat weather-beaten and sun-browned; the girl had that olive Spanish-like complexion, so often, so unaccountably often seen in Ireland; but her clear skin, dark as it was, shewed the mantling blood quite as distinctly as did the Englishman's lighter cheek. She continued: 'I believe you *are* a soldier, and not a savage. But Biddy can wait.—Can't you, Biddy?'

'An' shure me an' the childer can wait,' returned the woman; 'an' iv it's for a wake, we'll be continted, Miss Kate.' It's as ye plase intirely.'

The officer had taken out his purse, which was one of those long netted affairs at one time

so popular, and through which the money shone. Though it was not exactly a bloated purse, and though it contained more silver than gold, the glance which Biddy threw, in spite of herself, at the treasure was so painfully eloquent, and there was such a sad though resigned expression on her poor coarse face, that Kate—crimsoning more than before—said: 'Biddy only wants a trifle for something for one of her children, who—who she thinks is dying.' There was a little catch in the breath here, which in a less resolute person might have been turned into a sob. 'And it is very bitter to us to find'—

'Do not say any more,' exclaimed the soldier. 'Why be so unwilling to let me aid you in charity? I will give Biddy a trifle to help her.' As he spoke, the Lieutenant had moved the ring of his purse, and the quick eye of the girl saw that he was taking out a piece of gold.

'O no!' she said, with a little laugh; 'poor Biddy's idea is of something very different from that. Two shillings is what she craves, and if you really wish'— In her impulsive manner, she had stretched out her hand to stay the officer, and had touched his wrist. Recollecting herself, she drew back; while Westbury extracted the required amount and a trifle besides. 'Here, Biddy,' he said; 'here are four shillings. You need not mind taking them even from a soldier; pray consider the money as a gift from Miss Decroy, by my hand.'

'Sure, it's a kind thing for ye to do, anyhow,' said Biddy, with a profusion of courtesies. 'An' a good heart in a sojer, or a kind word from wan, bates me entirely.'

This grateful speech on the part of Biddy provoked a smile from both her hearers; and as Westbury turned and left the hall, he exchanged for the first time a kindly glance with Miss Kate Decroy.

As the Lieutenant entered his little room wherein was arranged his solitary tea equipage, his colour was higher than before, higher than even Miss Decroy's had been, and he smiled a half-pleased, half-vexed smile as he dropped into his chair. 'Upon my word,' he muttered, 'I am making an absolute fool of myself here. And what is worse, I am doing it with my eyes open. A boy might perhaps deceive himself; but there is no excuse for me. Here is a girl, a most malignant Roman Catholic—as I am expected to term all such—and a bitter rebel, who would cheerfully lay her head on the block, if by so doing she could insure the decapitation of every man in my regiment; a girl who tells me every day, in everything but words, how she hates, how she abhors me and my country; and yet—and yet—and yet, hang me if I am not falling in love with her every hour of my life! Oh, it's too ridiculous; it's absurd!'

Absurd the position might have been, if the Lieutenant's own description were true; ridiculous enough, no doubt; but he might have taken heart, on reflecting that the sensation was by no means uncommon to mankind. His solitary tea equipage was set out, as already hinted; and the sigh with which he sat down was really in keeping with the lugubrious reflection he had just made.

The equipage referred to was not altogether in harmony with a modern arrangement, inasmuch as a bottle of whisky and another of brandy

formed part of the provision. Such additions were expected in those days; and it would not have told so much to the credit of Lieutenant Westbury then, as it may do now, to say that he did not touch either of them; although he could take his tumbler after a weary march across the neighbouring bogs, or after a long patrol in the rain which so often refreshed the vicinity of Boreen.

The room in which the Lieutenant was sitting was a mere slip of a place, entered from the hall, and lighted by one window which looked upon the road, if such a name could be bestowed on the waste land in front of the House. Immediately adjoining was his bedroom, which was exactly similar in size and shape, so that it was not a hazardous conjecture to suppose that one room had at some earlier date been converted into two by the simple expedient of running a partition down its centre. Excellent as this device might be, it had the effect of rendering the second room very dark, it being dependent entirely on the borrowed light which was afforded by a window in the partition which transmitted a portion of the rays from the outer window.

It was now almost dark; and so, in accordance with custom, a lamp was taken into his bedroom, the light of which shone through the partition window into the sitting-room; but directly afterwards Miss Kate Decroy entered, bearing the lamp by which the Lieutenant sat and read of an evening, and as was her wont, she inquired if he wanted for anything. Thus far the courtesy of the House extended; but Westbury had soon seen that it was almost perforce; there was no cordiality in it. It was commonly Miss Kate, or her sister Mrs Claridge, who made the inquiry, for in the 'bad times' which had come upon them, they and many others who were considered of some little importance in their neighbourhoods, were reduced to straits which oftentimes entailed absolute hardship. The Lieutenant made the stereotyped reply, and as he did so, thought with a twinge of envy of the fluent flippant tongues of his brother-officers, how they long ere this would have established quite a brisk interchange of compliments and smart sayings. And yet, he doubted it, as he covertly glanced at the composed face, high forehead, and arched brows of Miss Kate. For a wonder, she lingered for a few seconds after putting down the lamp—which was very different from her usual custom—and after a little hesitation, said: 'You could not have shewn me a greater favour, sir, than by compelling Biddy—or rather myself—to accept your loan to-night. She was my nurse, and my sister's nurse; so from infancy we have been accustomed to look upon her as one of ourselves; and even in these terrible times, nothing is so painful to us as our inability to'— She hesitated again here, and a suspicious brightness swam in the eyes, that were bright enough already.

Of course the Lieutenant laughed at the idea of his having conferred any favour at all, and hoped he should often have the pleasure of helping Biddy, whom he declared he had taken quite a fancy to.

At this Miss Decroy smiled and left the room.

Then the Lieutenant discovered—as it is common with men in such cases to discover—how excessively clumsy and ill-chosen all his words

had been; that he had better have used any set of phrases than those he had actually employed. And then too, he remembered that he had once had Biddy before him on a charge of hurling the most treasonable expressions at Corporal Chessley, who, with a file of men, was bringing in a suspected peasant. 'I never saw her look so beautiful,' was his concluding reflection. 'A heightened colour becomes her wonderfully.' The Lieutenant took a book; but he could not read; the print was too small; the light was too strong; the story was uninteresting; he had read it before; there was something wrong somewhere. So at last he decided he would get out his chess-board, and by the aid of a problem or two and his cigar-case, would pass as quiet an evening as his men would allow. 'Though,' he muttered, as he lighted his cigar at the lamp—the reader knows there were no lucifers or vestas or vesuvians in those days—'I warrant I shall have first the sergeant-major, then the corporal, then the old major again, with the most important and exciting intelligence, directly I get comfortably settled.'

He moved the lamp to a distance, as its too close glare seemed to interfere with his train of thought; then arranging his board so that it was midway between the light, from the inner room and that of the lamp he had moved, began his study. At first, with knitted brow, with eyes steadily bent on the board, he tried the solution of his problem, and moved and removed his pawns and knights and rooks, as a studious chess-player does; but gradually he fell off, and intervals of several minutes occurred in which he gazed thoughtfully at the opposite wall, and aided by the mild fumes of his cigar, meditated upon some subject which might have been interesting enough, but was not chess. From time to time he roused himself, and applied himself vigorously to the knotty problem, until again he leant back in his chair and gazed vacantly across the room.

Suddenly he uttered an exclamation of intense surprise, and glanced hurriedly, even alarmedly, round the room, and then up at the window of the inner chamber. All was silent, and but for himself, motionless. The light shone steadily through the window, as it had done all along, and not even his eager listening could detect the slightest sound. Yet the Lieutenant was aroused by something. He rose, and his sternly set features bore an expression widely differing from the abstracted air they had so lately worn. Stepping to a little sideboard at hand, he took from thence a brace of pistols, at the priming of which—flint and steel, then, we must remember—he glanced with habitual caution, then left the apartment. There was no communication by door between his sitting and his bedroom; each was entered from the hall, through which of course he had to pass to reach the inner chamber. He threw a swift keen glance around him as he left his sitting-room, lingering for an instant with a special searching look on the lobby or passage which ran to the rear of the House, and up the broad flight of stairs which, with their massive but decaying rails, took up so great a space in the hall.

All was quiet. He could see distinctly around him, for a great iron lamp swung from the roof there, and flared away all the evening. He threw wide open the door of his bedroom; paused for an

instant, as though he expected some one to rush out upon him; then with a pistol in readiness, entered. All was quiet there also. The lamp burned on its table; his bed was trimly made; even a torn sheet of letter-paper which he had left on the table was undisturbed. He was certain of this, for he remembered, with a curious exactness, precisely how it had looked when he left it there. After a searching glance round the little room—it was so small, it required no considerable examination—he left it, and returned to his former apartment, the knitted sternness of his brow not relaxing until after he had replaced his pistols, resumed his seat, and again lighted his cigar.

'It is very strange,' he soliloquised at length. 'I suppose I must have fancied it. Perhaps I grow nervous, sitting here by myself. And yet, I don't know; I don't think I could have made a mistake. I swear I saw the shadow of a man fall across my chess-board in a direction in which my shadow could not possibly fall. It must have come from my bedroom window. Had I but had presence of mind enough to look up there at first! Yet there's not a man in the House but myself; and even if there were, what could he possibly want in— No! It is impossible. Of course I must be in error; I must have been half dozing. Yet, if I did not see a man's shadow fall across the table, I can never again trust my eyesight!'

The Lieutenant sat and smoked thoughtfully, until he had received the nightly report, and it was time to retire for the night. Enough of his previous discomposure hung about him to make him take his loaded pistols into his bed-chamber, and see very carefully to the fastenings of his door; and this having been done, he slept undisturbedly until the morning.

THE TOWERS OF SILENCE IN BOMBAY.

No European who has visited Bombay can have failed to remark the peculiar and primitive way the Parsees have of disposing of their dead. It is admitted by all, that among the different nations of India this little community of enterprising and intelligent people are foremost in casting aside superstitions and uprooting prejudices. They have taken the lead of civilisation and enlightenment in India, and they are of all others the least fettered by mischievous prejudices and idle superstitions. It seems, therefore, quite surprising that they have yet persevered in a custom which is calculated to shock enlightened minds, and which no one can contemplate without a sense of horror. Surprising as it may be, it is nevertheless a fact that they expose the dead bodies of their co-religionists to be *devoured by vultures*. A glance at the ceremonies performed over the dead body of a Parsee before it is conveyed to the Towers of Silence, and the mode in which it is left to be devoured by these vultures, may be interesting.

It may be premised that the Parsees are the followers of the prophet Zoroaster, who flourished in Persia, and who, according to the Babylonian historian Berosos, founded the dynasty of the kings of Babylon two thousand years before Christ. At the present day the Parsees are erroneously

termed fire-worshippers; but the true spirit of the Zoroastrian religion is to worship the great Creator through his elements. The pith of their doctrines of faith consists in three words: Manashni (good thoughts), Gavashni (good words), Kunashni (good deeds). In no sense are they idolaters. At the same time many of their ceremonies are strange to those not intimately acquainted with their religion; those connected with the disposal of their dead being peculiarly revolting, though still defended by many upon certain sanitary grounds.

A corpse is considered by the Parsees a very sacred thing, and the touch of an ordinary mortal is supposed to contaminate it. Immediately after the vital spark has left the human frame, it is taken charge of by two nassasálars (a body of men who are specially ordained to perform funeral rites, and paid by the community at a fixed salary). By them it is cleansed and clothed in white unsullied garments, after which it is placed on two flat stone slabs on the ground. The female relatives and friends gather together in the hall where the remains, with all but the face covered, are laid. The male relatives, friends, and all those who wish to shew respect to the dead, clad in their white flowing robes, sit on benches on the verandah—and if the verandah is not large enough to accommodate all, on the sides of the street. When a Parsee of note dies, it is not unusual to see a whole street lined with co-religionists, sometimes three or four rows deep. They generally gather together about an hour before the time announced for the remains to be carried to the Towers of Silence. The women sometimes indulge in loud lamentations, particularly if death has overtaken a young person; but the men maintain a grave and respectful silence.

About an hour before the time for taking the remains away from the house, the nassasálars transfer the corpse from the slabs, and place it on an iron bier, which is usually quite new, except in the cases of very poor persons. After the transfer of the remains to the bier, two priests standing at the foot of the corpse commence repeating the funeral service, every one else maintaining the strictest silence. During two pauses in the service a dog is brought in and made to look at the face of the dead person. The reason or philosophy of this extraordinary performance is not very clear. At the end of the service, the priests make a very low obeisance and retire. The pent-up feelings of the women generally break out at this moment, and a scene of the most piteous lamentations ensues. The men outside then come in, and after looking at the face, make a deep and reverential obeisance; some men going down on their knees with the face touching the ground—most of them muttering prayers, subdued but fervent, for the soul of the dead. The face is now covered up, this being the last glimpse the female relatives are permitted to have of the dead. The bier is then lifted off the

ground by the nassasálars, and brought out of the house, where two others join them, and take each of the four ends on their shoulders. The men outside rise and remain standing, performing a reverential obeisance as the bier passes them. The mourners then fall in, and the funeral procession, led by the priests, moves on. After the cortège has proceeded about a hundred yards, the high-priest comes to a stop; but some other priests with the relatives and intimate friends of the family follow the funeral all the way to the Towers of Silence.

The highest hill in Bombay, on the Chopati side of it, is selected by the Parsees as the site of these Towers—the last resting-place of their fellow-religionists, the top of the hill being surrounded by a wall, within the precincts of which none but the Parsees have free access. (Occasionally a European is permitted to enter the gate; but he is not allowed to proceed further than a certain distance, and the view he obtains is a very indistinct one.) To facilitate the ascent of funeral processions, a flight of countless stone steps is built from the bottom of the hill to the very gate of the wall which gives admission to the ground. As one enters the gate, he is bewildered by the magnificence and the grandeur of the scene that bursts upon his sight. The whole of Bombay lies at his feet, and the most beautiful gardens imaginable lie in front of him. The distant view of the sea adds to the enchanting spectacle. The first thing that engages the attention is the 'Sagari,' a small stone building where the sacred fire is kept, and where Parsees often go to say prayers for the soul of their deceased friends or relatives. In the distance are visible the white walls of the seven different Towers, erected at irregular but considerable distances from each other. After the Towers are once consecrated, none but the nassasálars are allowed to enter; but when a new one is built, it is open to the Parsees for inspection; and the ceremony of consecration is performed in the presence of all those of the community who choose to attend.

On the top of the wall of the Tower which is being used for the time being, may be seen huge vultures to the number of from forty to fifty. Inside the iron door—which is on a level with the surface of the top of the hill—is a flight of a few steps downwards. The arrangement in the interior of the Tower is perfectly simple. There are stone slabs arranged—a little distant from each other—in three concentric circles; the slabs of the innermost circle being intended for the bodies of children, are smaller than the slabs of the second circle, which are exclusively used for the bodies of females; the outermost circle having the largest slabs, being intended for the remains of males. In the centre, is a well of immense depth; and the surface is built so as to slope gently from all directions towards the well.

When the funeral procession arrives at the summit, it proceeds straight to one of the seven Towers that is in use at the time. After a short halt, for the purpose of allowing the relatives to take a last look at the deceased, two nassasálars proceed slowly with the bier towards the iron door. One of them opens the door with a key, and they disappear with the earthly remains, and close the door after them. They then deposit the dead body on one of the

stone slabs, tear the garments in which it is enveloped with a hook; and issuing out of the same door with the empty bier, proceed to a place where they wash themselves, change their clothes, and undergo a purificatory ceremony. Directly the nassasálars emerge from the iron door, the vultures on the top of the wall descend, and after about ten minutes reappear. Then everybody knows that nothing but the skeleton is left of the lifeless remains deposited within the walls only a few minutes ago. When the nassasálars enter again with another funeral, they drag the skeleton and everything with a hook to the well in the centre; and so the bones of the members of this united and unique community mingle together in death. Of course, the height of the hill, combined with the height of the Tower walls, renders it impossible for any one else to obtain even the faintest glimpse of the inside of these Towers. The nassasálars alone witness what must sometimes be a horrid and revolting sight inside this awe-inspiring place.

Meanwhile, the men forming the procession—immediately after the nassasálars enter the iron door—turn their backs, and retrace their steps towards the 'Sagari,' where they wash and say their prayers, and return to their respective homes in carriages or bullock-carts, provided, according to their means, by the relatives of the deceased. It is popularly believed that the vultures are gifted with such fine instinct that they will not touch a body if there is the slightest spark of life in it, however latent that spark may be.

Some years ago, when the affairs of the community were managed by the Punchyat (five headmen), the nassasálars, it is believed, had strict orders to kill any person who came to life again after being taken to the Towers. It is even believed by many that some murders have in this wise been committed; the sole justification for such barbarity being a strong conviction that anybody coming out of the place of the dead would bring with him the curse of pestilence and other visitations of Providence. It is also believed that those who have been able to climb over the wall and make their escape after resuscitation, have exiled themselves from Bombay, never daring to acknowledge their identity, for fear of being killed. It is needless to say that whatever may have happened in the past with impunity, it is different at the present day, as the English government would recognise no reason why a murder committed in the Towers of Silence should not be punished with the same severity with which a murder in any other place would be visited.

The only reason the Parsees can bring forward in favour of this custom is, that on sanitary consideration, it is the best mode of disposing of their dead, and renders the living secure from the risk of impure water and vitiated air in the vicinity of graveyards. Moreover, they maintain that it is less objectionable than burial, which has the disadvantage of involving a more protracted process of destruction. But it must be admitted that the reasons for persevering in a custom at once so shocking and barbarous, are very weak; and though most educated Parsees of the present day recognise the fact, it is difficult to make a sudden transition, and throw off the fetters of a custom which has come down to them from generation to generation for so

many hundreds of years. A unanimous and powerful effort alone can abolish a custom, the contemplation of which fills the European mind with horror.

RUPERT'S REVENGE.

THE funeral was over; the will had been duly read, and the various relatives taken their departure, having paid the last tribute of respect to the deceased. The servants were discussing matters now in the kitchen; whilst the two sons in their sable garments held converse in the dining-room overhead.

The late Mr Charles Conway had lived to a good old age; but his end had overtaken him one might say unawares. He was seventy-three; but a more hale hearty man was not to be found for miles round; and when the tidings were made known that he had suddenly dropped down dead, the shock was considerable amongst his many acquaintances. There had once been a large family circle at the Grange; but death had narrowed it, until only the father, his eldest son Stephen, Rupert the third son, and Helen his only surviving daughter, remained. Mrs Conway had been dead for many years. Perhaps, had she lived, matters might have been different. As it was, the domestic horizon had been too often overcast with clouds, and jealousies arisen which had created a gulf between those who by nature ought to have been nearest and dearest.

To a certain extent his children had all disappointed Mr Conway. Outwardly, there was no fault to find with the steady though somewhat sullen slow-spoken Stephen. He had never defied the parental authority, never dipped unduly into the family exchequer, never forgotten himself in any obvious manner. In fact, while every one was obliged to confess that he was exemplary in his actual conduct, still scarcely a creature really liked him. He was wont to boast that he never had owed a penny in his life—he might have added, nor given one away; for innate meanness—carefully concealed under a studied manner—was his chief characteristic. He was a short spare man of about seven-and-twenty at the time of his father's death, with a thin-lipped, ominously close-set mouth, and pale blue eyes of the sharpest, shiftiest description. Dressed in his mourning habiliments, he looked smaller, even more foxy than usual; and there was an evil light in his face as he sat opposite Rupert, discussing with great energy the lately opened will.

Rupert was three years younger; a tall well-made young fellow; the apple of his father's eye—despite the disappointment he undoubtedly had been to him—ever since his earliest days; for Rupert had been a reckless good-hearted lad from the first; never out of mischief and scrapes, but so winning, so warm-hearted and affectionate, that it was seldom old Mr Conway could find it in his heart to reprove him with the severity he but too richly deserved. While his crimes were restricted to boyish pranks perhaps the lenity did no harm; but when Rupert went out into the world and repeated his follies on a larger scale, Mr Conway began to realise that a firmer hand would have been truer affection; and instigated ceaselessly by Stephen, who remained at home to

manage the small property belonging to the family, he made an effort to draw the reins so tightly that not unnaturally the high-spirited Rupert rebelled. Stephen viewed with silent wrath several occasions on which his father had disbursed considerable sums to set his brother straight again; but true to his nature, he made no open comment. He waited with a patience worthy a better cause until the little drops of poison which he skilfully administered by insinuations and plausible sorrow over Rupert's extravagances should do their work in undermining him finally in his father's affections.

'I would pay his debts sir—of course I would,' he would remark in his slow hesitating voice, when Mr Conway conversed with him upon the subject of Rupert's delinquencies. 'In fact you must do it; you will always have to do it. You can first mortgage the outlying fields; then the meadows; and if need be, the house itself. Pay his debts by all means sir!'

Mr Conway would then grow furious, and vow violently that he would never pay another shilling for Rupert. He would cut him off without a penny, and leave all he had between Stephen and Helen. At which threat Helen would intercede for the prodigal, and generally succeed in counteracting for a time the evil influence of Stephen.

Helen was a sweet-faced sensible girl, and being devotedly attached to Rupert, promised to prove a considerable obstacle to Stephen's schemes. So he cast about in his evil mind how she was to be removed; and about a year previous to his father's death, an event happened which suited him exactly. She fell in love, and fixed her affections upon a man for whom her brother Stephen chanced to have a peculiar aversion. Mr Conway did not care for the match; but Helen's heart was set upon it, so the marriage took place, and Stephen reigned at last alone in his glory with his old father, who gradually became more and more under his influence.

Helen—or Mrs Marchmont as we ought now to call her—had gone abroad with her husband to join his regiment in India, so there was no one to speak a kindly word for Rupert, no one to remind him of her, when in a moment of peculiar irritation against his youngest son, Mr Charles Conway made his will. A will had been originally made, in which, though Stephen as the eldest son was to succeed to the Grange, Rupert and Helen were both justly remembered; and probably Mr Conway would have declared it to be the expression of his real wishes, if an ordinary death-bed had been accorded him; but the summons had come like a thief in the night. No one heard his last sigh; no one was near to receive his last word. Suddenly the stroke had fallen; and whether in the darkness of that dread hour his thoughts had strayed to his favourite though cast-off child, no one would ever know. At all events, the will—a subsequent one, and made in a moment of anger long since past—was that to which his two sons had just listened, and which his old friends were now discussing the cruel injustice of. Everything was left to Stephen. Stephen had not schemed and plotted for nothing; he was master of the Grange, possessor of a snug balance at his banker's. And Rupert—why, Rupert had just got what he deserved—nothing.

Rupert was stunned by the contents of the will, but not a hard word escaped his lips. 'I cannot think he meant it,' he said huskily. 'But I shall never blame him for it.'

'And pray, whom do you blame?' inquired Stephen hastily. 'I should think you ought to blame yourself.'

'Perhaps so,' replied Rupert briefly. 'At all events, this is no longer the place for me to be in. I have a few odds and ends lying about which I shall ask you to send to me.—I mean to return to London this evening.'

'You needn't be in such a hurry,' responded Stephen, uneasily conscious of his share in depriving his brother of his inheritance. 'You'd better stay a day or two, till things settle down a bit; and after finding out what claims there are, I will see if I can't give you a hundred or so to start with.'

'Not a penny from you!' said Rupert. And true to this determination, he bade adieu to his old home that afternoon, with his heart heavy within him, and his pockets empty, but strong in his resolve to face life bravely, and to forget, if he could, the sharp stab of pain which had been inflicted upon him that day.

Mr Stephen Conway made great capital out of his proffered generosity to his brother, representing to his friends that he had gone so far as to offer to share everything equally with him, and insinuating that a very liberal arrangement was to be effected by-and-by; which as Rupert never came back to deny, people generally took for granted had really taken place. So the old Squire's unjust will gradually ceased to be censured, as his son had, according to his own shewing, acted so well about it.

Three months afterwards, Stephen Conway, on opening his daily paper, read therein a terrible shipwreck of an outward-bound vessel. She had been struck by another vessel, coming in an opposite direction, with such force, that in an incredibly short space of time she had sunk, and all on board, with the exception of three of the crew, perished. Below was a list of the passengers, and amongst them was the name of Rupert Conway, a second-class passenger, bound for New York. Perhaps in his inmost heart Stephen experienced some remorseful sensations when he read of his brother's death. Perhaps just at first he regretted having by evil means deprived him of his inheritance. Whether he did so or not, no one could tell. At all events, the self-reproaches must have been very evanescent, for the new master of the Grange soon shewed himself amongst his neighbours with anything but a sorrowful countenance.

By-and-by, rumours began to get afloat that Squire Conway meant to marry; and his choice was well known to lie between a certain Miss Judith Butler and her cousin Alice Butler. The only charm the former possessed consisted in the fact that she owned the sum of ten thousand pounds; while the latter, who lived with her, had only as her fortune one of the fairest faces in the world, to which might be added a sweet and charming disposition. Judith was twenty-four; Alice only just eighteen; and could the money but have been transferred, Squire Conway would not have hesitated for an instant in making his selection. However, had he been even inclined

to overlook her poverty, and forego the substantial benefits to be derived from a marriage with Judith, Alice, who had never been blind to his true nature, would most unhesitatingly have refused him. Rupert—poor reckless dead Rupert, had been her love. They had vowed to be true and faithful, the day he left his home to seek his fortunes; and even though she believed him to be drowned in the depths of the sea, she felt, or fancied, that it would not be possible for her ever to care for any one again. About a year after the tidings of Rupert's death had reached him, Stephen married Judith. Even as Judith Butler, she had never been careful to conceal her arrogant temper and vain appreciation of herself and her position; but as Mrs Stephen Conway, all restraint was at an end. No sooner was she installed in the manor-house than a thousand faults were found with it. The furniture was not fit for her; and the whole place, she declared, must be done up properly, or it would be impossible for her to live in it at all.

Stephen had been able to get the better of his father, and by deep-laid schemes to oust his brother and sister from their rightful inheritance; but he was utterly incapable of managing his wife. She spent her own money and his with a lavishness which he could not control; and if he attempted to reason or remonstrate, he was met with a burst of violence which he seemed powerless to fight against. Before many months were over, he bitterly regretted his marriage; but as it was irrevocable, he tried to redouble his own meannesses, in order to counteract Mrs Conway's reckless extravagance.

The old Grange was transformed from a plainly furnished comfortable abode into a sumptuously decorated mansion; vast mirrors reflected back Stephen's knitted brow and anxious face when he entered the drawing-room, where Judith, stretched upon a sofa with a novel in her hand, was generally to be found. Console tables, couches, cabinets, silken hangings, all were added, as Judith's fancy dictated; and when Stephen, in amazed wrath, ventured to remark upon the uselessness of such possessions, her reply was invariably: 'I suppose I may spend my own money as I choose.' Nor had Mrs Stephen any intention of wasting her splendours on the desert air. Her friends must see them, or what was the use of having them? So invitations were freely issued, and accepted in the friendliest way imaginable; and Stephen, with suppressed rage in his heart, presided at banquets which he felt his income was quite unequal to provide. So three years passed by, Mrs Stephen still entertaining, gadding about wherever there was any gaiety to be got, and decking herself out in the most expensive clothes she could think of.

Stephen's misery was plainly written in his face; his body seemed shrunken, his lips thinner, his eyes keener than ever. Things were not going well with him; and as if, he thought, to add to his expenses, news came from India that Mr and Mrs Marchmont had perished in the Indian Mutiny—been both cruelly massacred; but that their only child Maude, a little girl of four years old, was being sent home to the care of her only relation, Mr Stephen Conway. Mrs Stephen hated children—she had none of her own—and not even little Maude's desolate position and fair little face

touched her hard unwomanly heart. Some kindly hands had clothed the little orphan in black garments, and had confided her to the charge of a family who were themselves coming to England; and Maude was brought down to the Grange, where she was duly delivered over to the tender mercies of her aunt Judith and Uncle Stephen.

Maude had been accustomed to nothing but the greatest love and affection; but with the keen instinct of a child, she seemed intuitively to understand that no kindness was possible from her aunt Judith; and she shrank from her so palpably as at once to rouse the evil temper which, truth to tell, seldom slumbered within Mrs Conway's breast.

'That child hates me,' she said to Stephen the day after Maude's arrival.

'What nonsense!' rejoined Stephen, gazing at the child, who with wide open eyes was listening to the conversation.—'You love your aunt Judith, Maude, don't you?'

'No!' replied the child; 'I don't love her!'

'There! I told you so!' exclaimed Judith triumphantly.—'Well, there's no love lost, you nasty little wretch! And since you hate me, you had better keep away from me.'

From that time, Mrs Conway's treatment of the child was uniformly careless, often cruel, and constantly unkind. Stephen knew it, and but for the question of expense, would have sent Maude away; and he shut his eyes to the severity and harshness to which, infant as she was, she was subjected. Maude's only happy time was when Alice Butler came over to the Grange. Alice was her champion, her defender; and to her she clung with childish despair, when persecuted by her aunt Judith for some childish misdemeanour.

When Alice's aunt, with whom she had hitherto lived, died, but for Maude's sake she would have gone out into the world to earn her own living; as it was, Judith begged of her to come to the Grange. Stephen echoed very gladly the invitation, which, for the child's sake only, Alice accepted. She was not to be idle. Judith was too indolent, too much occupied with planning fresh finery for herself and attending entertainments, to have time or inclination to look after her household; and into Alice's clever hands the reins of domestic government were to be given. Alice was sensible, thrifty, and a capital manager. So Stephen trusted a great reform might date from the time she came to them. And as far as the actual household bills went, and as far as a wonderful increase of order, regularity, and comfort went, the change was quite beyond even his expectations. However, Mrs Stephen, being now relieved from the tiresome duties of looking after servants and housekeeping, launched out more furiously than ever; bills undreamed of by Stephen were run up in every direction, and ruin slowly but surely advanced towards the master of the Grange. His wife's ten thousand pounds were gone, squandered; and his own resources—the portions that should have been Rupert's and Helen's—were fast becoming less. Stephen writhed under it, resolved upon retrenchment in the darkness of the night, schemed and planned until uneasy slumber overtook him, and the morning's light found him thinking it over still.

Mrs Stephen was deaf to reason; and often Stephen meditated upon how he could rid himself

of her altogether. But if there was one thing in the world he dreaded, it was an open scandal; and if he provoked her, he knew she would revenge herself on his tenderest points; and he had been just a little too unguarded to her on the subject of a few incidents in his life. About this time he went to London, and there, by the merest accident, heard of a wonderful investment in a Welsh mine. A vein of lead had been discovered in it; and as soon as it could be got into working order, the lucky shareholders who contrived to secure an early interest in it were safe to make a fortune. It was by the greatest favour Stephen managed to become possessed of an allotment. While he was in town, the shares advanced in a marvellous manner, and he was fully persuaded that his fortune was to be made by investing every available shilling in the brilliant scheme.

But he was a cautious man, though he desired to make a rapid fortune; so he journeyed down to the mine, surveyed it for himself, handled the precious lead, which was said to be the purest ever seen; satisfied himself it was not only *bond fide*, but far better than he had dreamed of. He hurried back to London, arranged a loan upon the Grange, the outlying fields and meadows that were once to have gone, according to his prophecy, in paying dead Rupert's debts; and then he invested in the lead mine. All the world seemed to be running after the Cwm Clwyd lead mine. The shares went up to a fabulous premium, and for a few brief months Stephen lived in a sort of fool's Paradise. Judith's extravagance would be a mere drop in the ocean when he had realised his coming thousands. What did it matter that for the present ready-money was rather a scarce commodity. Stephen had heaped all he could lay hands on into the mine, and all he was waiting for was for the mine to be brought into proper working order and the lead to be realised. Judith was duly informed of the coming golden shower, and on the strength of it felt herself more independent of Alice's good offices; for when Stephen became so rich, she would have a proper house-keeper, a proper establishment. Maude should be packed off to school, and Alice might then look out for a situation elsewhere.

Meanwhile Stephen lived in a perpetual state of anxiety for both the post and the papers. The first seldom failed to bring him good tidings from his friend in London; the second occasionally contained glowing paragraphs of the Welsh El Dorado in which his heart and hopes were centered. One day, however—a cold foggy one in November—another letter came for Stephen, the direction of which caused him to grow deadly pale, for it was in the handwriting of his brother Rupert!

The reported list of casualties turned out to be erroneous. Rupert had not been drowned; but he had apparently struggled fruitlessly with destiny in America, and was coming home. Blood was thicker than water, he wrote, and he wanted to forget old scores and to shake his brother by the hand again. Once he got back, he hoped he would have better health. He had met with an accident and was a bit of an invalid. Until he got stronger, he wanted to stay with Stephen. Nothing would recover him like his native air. He was pining to see the old place again. It was six years since he had gone away—six years since he had told Alice he cared for her. But there was no

mention of her in his letter, nothing beyond the idea that was conveyed to Stephen that he was coming back a beggar to foist himself off upon him. Stephen chafed wildly under this unlooked-for infliction. Rupert would come back, and bit by bit the true state of the case would come out—that he had never had a shilling of his father's; and all Stephen's plausible statements would be exploded.

Mrs Stephen counselled that the door should be shut in his face—audacious fellow that he was!

Alice trembled with a great happiness. To know he lived, to think she was to see him again, was enough for her true woman's heart. What did it matter if he was a beggar, or an out-cast! He was throned there, beloved, perhaps all the more fervently because of his misfortunes.

It was but a scant welcome that awaited the wanderer when, about the end of December, in the midst of a severe snow-storm, he arrived at the Grange. Stephen plainly told him he could do nothing for him; and Mrs Stephen elevated her eyebrows superciliously, and scanned his shabby garments with a hardly concealed sneer. He must not be seen by any of her fashionable friends, she told Stephen; and Stephen quite agreed with her.

Alice's greeting was quiet and gentle, like her sweet self. She was hardly changed since he had last seen her; perhaps a little graver, that was all. His quick eager glance saw she was outwardly the same. He had still to discover whether absence had made her heart grow colder. A few days, and he was reassured on that point. She was his still; and their old vows were taken again. Despite the chilliness of his brother, and the want of common courtesy on Mrs Stephen's part, Rupert seemed determined to stay on at the Grange for a time. He stayed long enough to see the way in which Helen's child was treated; to see the petty slights and annoyances daily practised upon Alice, the petty warfare and the petty triumph which was imbittering her existence, and from which he longed so inexpressibly to relieve her.

At last Stephen intimated to him that Judith intended to have some friends shortly, and that his room would be required.

'All right,' replied Rupert. 'Then that means that I am to depart? So be it, Stephen. But I do not regret having come, small as has been your welcome.'

'I wonder what sort of welcome you wanted?' rejoined Stephen gruffly. 'I'm not the sort of man to kill the fatted calf for prodigals.'

'No; I don't think you are,' agreed Rupert. 'However, I mean to make a home for myself—a home in which Alice has promised to be mistress, and I shall then relieve you of Maude.'

'Very fine talking indeed,' answered Stephen. 'You'd better make sure of bread-and-cheese for yourself first. As to marrying Alice, that is simply ridiculous; Judith won't allow it.'

'We shan't ask Judith,' rejoined Rupert. 'But don't let's quarrel, Stephen. We may as well part friends—mayn't we?'

'I am sure I don't care,' was the brotherly response; and in this mood he once more said good-bye to his brother Rupert.

Two days after Rupert had taken his departure, the Cwm Clwyd bubble burst. Water had, they

said, not only got into the mine, but had submerged it. The shares were not worth the paper they were written on, and Stephen Conway was ruined—not ruined with any hope of retrieving something out of the wreck, but ruined entirely—house and lands swept away at one fell swoop. Judith would not believe it. She stamped and stormed, declaring it was some vile conspiracy against them. Stephen could not have been such a fool as to have risked everything. But Stephen said it was even so—ruin stared them in the face. And as he pondered upon their dark dismal future, he remembered how he had plotted and schemed against his own flesh and blood—how Rupert had gone forth into the world penniless through him; and even so lately he had let him go away again when he fancied that the wealth he so craved for was about to fall upon him in a golden shower.

In the midst of his despair, Rupert returned again—returned to heap coals of fire upon Stephen's head—for Rupert had now a strange story to tell. Stephen listened to it like a man in a dream, realising only one thing—that Rupert, whom he had injured, had come to save him; that Rupert, whom he had robbed of his birth-right, was a rich man now, and out of his abundance was only eager to forget his wrongs, and to prove that a brother indeed is born for adversity.

This was Rupert's story. The vessel in which he left England had been wrecked, and he had saved the life of an American trader, a man of immense wealth, who out of gratitude had taken Rupert by the hand and given him employment under himself; how the bond between them had steadily strengthened; and finally, how he had died, leaving his wealth to Rupert—little under forty thousand pounds. 'Enough to save the old home, and plenty to spare too,' said generous Rupert.

Rupert and Alice reign at the Grange now, and Maude rejoices in freedom from Aunt Judith's tyranny at last. Stephen has set up on a farm, and thanks to his brother's generosity, is regaining some of the money he lost, though his captious irritable wife still does her best to prevent him. But Stephen is a better man than he used to be; his hard heart was fairly touched when, after all his unkindness, his brother rescued him.

As for Rupert, he has resolutely blotted out old scores. Life is too short to remember them, he says; and he sticks to his opinion that blood is thicker than water. He has won his hard selfish brother's heart. His triumph has been in saving him. And surely in all family feuds the outstretched hand is the noblest, the injured the happiest in forgiving; for after all, life is but a short affair. 'A few more tears, a few more sighs, some pleasure, much pain, and then injured and injurer pass away for ever. Is it worth while to hate each other?' We may not have Rupert's fortune, nor may we have a brother like Stephen, but how few families are exempt from 'family feuds.' How many are now separated who really mourn over the separation, long to be reconciled, thirst to see the once familiar face; to hear the voice that once made earth's sweetest music, but which has vanished, yet is blessing some one still in the world; some one who perchance cares for them

less than we still do, though we 'have a quarrel, and are not on speaking terms now!'

Oh! saddest of all things is a family feud. Death is very bitter; but if our darlings leave us with fond farewells, is it so hopeless as the death in life of an earthly separation? If we must have our revenge, let it be like Rupert's.

CURIOUS MARRIAGE PROPOSALS.

SIR ARTHUR HELPS believed that never since the world began did two lovers make love in exactly the same way as any other two lovers. Whether he was right is equally beyond proof or disproof. Certainly, no question has been put in such a variety of ways as the most momentous one a man can ask or a woman answer; how it is put depending upon time, place, circumstances, and the temperament of the individuals concerned.

A curious marriage proposal was made by a reverend bachelor who entered the matrimonial state on his death-bed. When in his seventy-third year the minister had a severe attack of paralysis, which left him so weak and helpless that, feeling his end was not far distant, he proceeded to set his worldly affairs in order. His parish being an exceedingly small one, and having been always a most liberal man, he had not much money to leave, which circumstance, had it not been for one reason, he would not have minded. For the last twenty years he had had as housekeeper a steady sensible woman, who had served him honestly, tended him like a daughter during his illness, and for whom he had quite a fatherly regard. It was on her account that he mourned his poverty. It would have been a matter for thankfulness could he have left her as much as would have supported her comfortably and respectably in her old age—she was now about forty-five. After weighing and considering the matter for some weeks in every possible light, a way out of the difficulty suddenly flashed upon him; and knowing the precarious state of his health, he resolved to execute his purpose at once. He called his housekeeper, and when she entered the room, he made her sit down; and after telling her how anxious and sorrowful he had been because he had no money to leave her, he continued: 'Of course you are aware that there is a Ministers' Widows' Fund, so that if the husband dies, his wife will have an annuity during her life. Now, supposing you marry me, although I am almost at death's door, you will be amply provided for in the future. Will you consent to this?'

'Master dear, you must be doting! What would people say!'

'I was never more serious in my life, Mary; and I am sure people will say we have both acted wisely in this matter. Take till the evening to think it over, and then bring me your answer.'

In the evening, Mary told him she 'would take him.' So ten days after they were married, and three days later the good old man died; but his

widow still enjoys her share of the 'Widows' Fund.'

A young officer was dancing a set of Lancers in a crowded drawing-room with an extremely pretty girl, to whom he made himself most agreeable. After the dance was over, he took her to a chair, and seating himself beside her, began to mourn his celibacy.

'It is exceedingly easy to remedy that,' said she.

'I don't think so at all; in fact I do not know a girl who would marry me.'

She laughed, and replied: 'Just go and ask some one here to-night, and I venture to say you will be accepted by the first.'

'Ah! I am not so sure about that. But—will you—take me?'

'With pleasure.'

And a few months later they were married.

A big good-natured doctor was desperately in love with, and had been twice refused by a fair-haired little woman. But instead of the disappointment curing his love, it only made the passion grow more intense. After the last refusal, he told her that if ever she changed her mind to let him know, as his love for her was unchangeable, and he would be proud to be her husband. Some months later he was driving home from seeing a patient, when he saw his lady-love riding in his direction. Supposing she would merely bow and pass on, as she had often done before, he did not pull up his horse. But the moment Miss Dixon came up to him, she reined in her horse, stopped, and called out: 'Won't you stop, Dr Hill?' He raised his hat, and replied: 'I shall be happy to do so;' then waited for her to speak. She was gazing at the ground and blushing deeply; but quickly looking up, she filled the doctor's honest heart with surprise and gladness by saying: 'Dr Hill, I have been closely watching you lately, and seeing nothing but goodness and noble-mindedness in your character, and believing you will make an excellent husband, I am willing to marry you.'

Mr Smith coming all the way from Australia on the look-out for a wife, saw a young governess on board a Glasgow steamer, whom, from her kindness and attention to some children under her charge, he fancied would suit him. So he went and introduced himself, and taking a seat beside her, said: 'I am fifty-three years of age; have an income of a thousand a year; am a total abstainer from intoxicating drinks; have a good house near Melbourne; and all I want is a good wife to complete my possessions; would you mind taking me?' She quietly replied: 'I have no objections.' And a few weeks later they were made one.

A young man of about twenty-three years of age, with neither money nor the prospect of getting any, came to the conclusion that the best thing he could do would be to marry a 'rich wife' and live on her money. Among his many acquaintances was a widow lady about twice his age, with three children, but with a steady income of two thousand a year. Her, he resolved to marry; and in order to cultivate her friendship, he took her presents of flowers and fruit, and gave the children books and rides on his horse. The lady kindly received his atten-

tions, gave him the liberty of her house, and treated him like a younger brother in every respect. The young fellow interpreting her kindness to suit himself, and believing he had nothing to do but ask her, ventured one evening on the subject in the following manner: 'I wonder very much why you don't remarry, Mrs L—.'

'Simply because no one wants a widow with three children.'

'I know one who would be proud to have you and your dear children,' said the wooer, feeling the worst was well over.

'Indeed, you are most flattering this evening.'

'No; I am not flattering. I love you, and would be proud to be your husband.'

She looked coldly on him; then replied: 'You mean you would be proud to own my money sir, I have been vastly deceived in you.' Then pointing to the door, she continued: 'Leave my house; and while I live, never dare to re-enter it.'

When Lord Strangford sat down to criticise a book of travels by Miss Beaufort, he little dreamt that before long he would write to the young authoress: 'I was thinking the other day about a communication from the Emperor Akbar to the king of Portugal, which contained a request for copies of the holy books of the Christians, and in which the following sentence occurs: "In the world of humanity, which is the mirror and reflection of the world of God, there is nothing equal to love or comparable to human affection." For many years I have felt and known this, though I never said it till to-day to any one. When you next write, please give me the possessive pronoun of the first person.' Surely never was a declaration made in quainter fashion, saving perhaps by the Scotch beadle who led the manse housemaid to the churchyard, and pointing with his finger, stammered: 'My folk lie there, Mary; wad ye like to lie there?' Or the lugubriously humorous Irish lover who took his girl to see the family vault, and then and there asked her if she would like to lay her bones beside his bones!

Louise de Savoie popped the question to Bourbon, but had to take 'No' for her answer, the Constable curtly declaring that the disparity of years between them, and his own feelings, rendered the union impossible.

If ladies sin against propriety in taking the initiative, they can hardly be blamed for bringing a shilly-shallying or over-bashful lover to the point, when a good opportunity presents itself. Such an opportunity sufficed to end what had been a somewhat tedious courtship. The young man paying his usual evening visit, asked his lady-love how she got along with her cooking. 'Nicely,' replied she; 'I'm improving wonderfully, and make splendid cake now.'

'Can you?' said the young fellow, ignorantly rushing on his fate. 'What kind do you like best?'

'I like one made with flour and sugar, with lots of raisins, currants, and citron, and beautifully frosted on the top,' responded she.

'Why, that's a wedding-cake!' cried he.

'I meant wedding,' said she; and there was nothing left for him but to say he meant wedding too.

Equally cleverly cornered was the Western man whose girl told him she was a mind-reader; whereupon he naturally inquired if she could read

what was in his mind, eliciting for reply: 'O yes! You have it in your mind to ask me to be your wife; but you are just a little scared at the idea.' It is plain the notion did not scare her, any more than it did the Galloway girl, who when Jock, coming into the kitchen while she was preparing breakfast, said: 'I think I'll marry ye, Jean!' answered: 'I would be muckle obliged to ye if ye would!' and so concluded the bargain; not even stipulating, like another ready lassie on accepting as sudden an offer: 'But ye maun gie me my ducs o' courtin' for a' that, Jamie.' That right of courtship is one out of which no woman ought to allow herself to be defrauded.

Little as faint-heartedness in a lover may be to the liking of fair lady, it is sufficiently flattering to be condoned; but when any Caleb in search of a wife chooses to sue by delegate, he assuredly deserves to fail ignominiously. Love is not to be won by attorney; and oftentimes the attorney has thrown his client overboard, and carried off the prize himself; as happened when William Grimm went courting in his brother's behalf. Hooker escaped that risk by leaving everything, even the selection of the lady, to Mrs Churchman, who found him a wife, and achieved a son-in-law herself at the same time.

Proposing by proxy is the rule, not the exception, in Greenland. Time was when the Greenlanders won their wives by capture; but since their conversion by Danish missionaries, they have become the tamest of wooers. Now a candidate for the holy state goes to a missionary, and tells him he wants a wife.

'Whom?' asks the missionary, and learns the woman's name.

Sometimes the man answers: 'Yes; she is not unwilling; but thou knowest womankind.' Usually the answer is 'No.'

'Why have you not asked her?' inquires the missionary.

'It is difficult; girls are prudish; thou must speak to her.'

Accepting the office, the good man sends for the girl, and after a little conversation, says: 'I think it is time to have thee married.'

The girl declares she has no mind to wed.

'That is a pity,' says the missionary. 'I had a suitor for thee.'

Of course the damsel is curious enough to want to know who the suitor may be, and of course her curiosity is satisfied. 'He is good for nothing,' she exclaims with a toss of the head. 'I won't have him.'

'But,' the go-between urges, 'he is a good provider; he throws his harpoon with skill, and moreover he loves thee.'

Still pretending to be obdurate, the girl answers that she will not consent to the match.

'Well, well; I will not force thee; I shall soon find a wife for such a clever fellow,' says the missionary, making-believe there is an end of the matter.

The girl does not go; she stands silent for a little while, then in a low voice sighs out: 'Just as thou wilt have it.'

'No; it is as thou wilt; I'll not persuade thee,' replies the clergyman.

Then with a deep groan, the maiden says 'Yes,' and the matter is settled.

Tyrolean lassies are by old custom spared the necessity of giving tongue to their 'Ay' or 'No.' The first time a young man pays a visit as an avowed suitor he brings with him a bottle of wine, of which he pours out a glass and offers it to the object of his affections. In any case she will not refuse it point-blank; that would be too gross an insult; but should the wooer not be agreeable to her, or his declaration come a little too prematurely, she declines the proffered wine, pleading that it looks sour, or that wine disagrees with her, or that the priest has forbidden her to touch it, or any other excuse feminine ingenuity may suggest. If she likes the lad and is equal to owning it, she empties the glass, taking especial care not to spill any of the wine, for if she does so, or the glass or bottle be broken, it is a most unhappy omen. 'They have spilt the wine between them,' say the peasants when a marriage turns out badly.

Dumb declarations are in vogue too among the Boers of South Africa. Mr Anthony Trollope tells us that when a young Boer goes in quest of a wife he puts on his best clothes, sticks a feather in his cap, provides himself with a bottle of sugar-plums, and a candle—a wax one if possible—mounts his horse, rides to the house holding the young woman he would honour, hangs the reins on the gate, dismounts, and enters. His smart gear, his feather, and his candle bespeak his errand. To make the point quite clear, however, he offers the candle to the daughter of the house. If she takes it, it is lighted; the mother sticks a pin in the candle to shew how long the young people may remain together without interruption, and she and everybody else retire. Mr Trollope says a little salt is sometimes put in by somebody, to make the wick burn slowly; but when the flame reaches the pin, mamma comes in, the 'freying' is over; and a day or two afterwards the pair are made one.

They manage these things differently in Texas. This is how a fond couple come to an understanding, according to one who pretends to know. He sits on one side of the room, in a big white-oak rocking-chair; she on the other side, in a little white-oak rocking-chair. A long-eared deer-hound is by his side, a basket of sewing by hers. Both the young people rock incessantly. He sighs heavily and looks out of the west window at a myrtle-tree; she sighs lightly and gazes out of the east window at the turnip-patch. At last he remarks: 'This is mighty good weather for cotton-picking.'

'Tis that,' the lady responds, 'if we only had any to pick.' The rocking continues. 'What's your dog's name?' asks she.

'Coony.' Another sigh-broken stillness.

'What's he good for?'

'What is who good for?' says he abstractedly.

'Your dog Coony.'

'Fur ketching 'possums.'

Silence of half an hour.

'He looks like a deer-hound.'

'Who looks like a deer-hound?'

'Coony.'

'He is; but he's sort o' bellowsed, an' gettin' old an' slow, an' he ain't no 'count on a cold trail.'

In the quiet ten minutes that ensue she takes two stitches in her quilt; a gorgeous affair, made after the pattern called 'Rose of Sharon.'

'Your ma raisin' many chickings?'

'Forty odd.' Then more rocking, and somehow the big rocking-chair and the little rocking-chair are jammed side by side, and rocking is impossible.

'Makin' quilts?' he observes.

'Yes,' she replies, brightening up, for she is great on quilts. 'I've just finished a gorgeous "Eagle of Brazil," a "Setting Sun," and a "Nation's Pride." Have you ever saw the "Yellow Rose of the Parairy"?'

'No.' (More silence.) Then he says: 'Do you love cabbage?'

'I do that.'

Presently his hand is accidentally placed on hers, of which she does not seem to be at all aware. Then he suddenly says: 'I've a great mind to bite you.'

'What have you a great mind to bite me for?'

'Kase you won't have me.'

'Kase you ain't axed me.'

'Well now, I ax you.'

'Then now, I has you.'

Coony dreams he hears a sound of kissing, and next day the young man goes after a marriage license.

Some of our readers may already have seen the following, but it is so good that we cannot resist giving it. A bashful young peasant was greatly captivated by the charms of a pretty girl in his own station in life; he was exceedingly anxious to ask her to marry him, and had often resolved to do so, but for so far his courage had always failed him when the opportunity arrived. However, one night he resolved to hear his fate in spite of his modesty, so he started off to spend the evening with her. When he arrived, to his joy her parents were from home, and she was seated knitting at the kitchen fire with a big gray cat lying at her feet. Jamie sat down beside her, but not a word could he say, till at the end of half an hour he inwardly resolved to 'finish this business;' so, acting on a 'happy thought,' he placed the cat upon his knee and stammered forth: 'Pussy, ask Lizzie will she marry me?'

Lizzie blushed and smiled, but managed to say: 'Pussy, tell Jamie I'll take him.'

EXTRAORDINARY CANINE INTELLIGENCE.

THE dog whose intelligence we are about to note was well known to the writer, who therefore can vouch for the authenticity of the narrative.

Several years ago, Edward Cartwright, then head-gamekeeper to the late Mr Charles Chaplin of Blankney, Lincolnshire, had in his possession a handsome black retriever dog answering to the name of Moss. This animal, owing to his remarkable docility and sagacity, was a special favourite both with the gamekeeper and his wife; hence Moss, instead of being quartered with his canine brethren in the adjoining kennels, had the free run of the best parlour, being—in the absence of children—regarded and treated as the household pet. One winter, the mistress of the house was confined to her bedroom by severe illness for several weeks. During this period the keeper used to spend the long evenings in his wife's cosy bedroom; Moss, as a privileged individual, invariably accompanying his master. On one occasion, after thus spending the evening up-stairs, Mr

Cartwright, on descending to the parlour, found that he had left his hat and slippers in the bedroom. Turning to the dog, who had followed him, the keeper said: 'Hey Moss, fetch my hat and slippers down-stairs.' In obedience to the command, Moss bounded off at once; and in the course of two or three minutes returned, carrying the hat in his mouth, with the slippers inside the hat. This latter circumstance considerably puzzled Mr Cartwright. Who had put the slippers inside the hat? He knew the utter improbability that it had been done by his wife, whom he had left in bed unable to move without assistance. As for the servant, she had been busy setting the supper table, and was not out of his sight for a moment, whilst the dog had gone up-stairs and returned. It was clear that neither mistress nor servant had so thoughtfully arranged the slippers inside the hat for the convenience of the dog. Who then had done it? That was the mystery. On returning up-stairs, Mr Cartwright mentioned the matter to his wife, who forthwith explained the mystery. She described how that sitting propped up in bed, she observed Moss enter the room, the door being left ajar; and after sniffing at the slippers which lay on the hearth-rug, he turned quickly to the hat, which stood on a seat in a window recess, and sniffed at that. Then he looked towards the bed, and seeing his mistress, he took up one of the slippers, dropped it suddenly, and commenced whining, as much as to say: 'Why don't you come and help me?' After a moment or two he appeared to realise the fact that no assistance could be rendered by his mistress; so raising his forefeet on to the seat, he seized hold of the hat, placed it on the floor, took up the slippers one by one, and *dropped them inside*. This done, he took the hat in his mouth, wagged his tail with an air of triumph, and trotted off to deposit the articles collectively, and not one by one, at his master's feet; thus literally fulfilling the adage of 'making his brains save his heels.'

SOCIETY SATIRES.

THE MANAGING MAMMA.

SHE walketh up and down the marriage mart,
And swells with triumph as her wares depart:
In velvet clad, with well-bejewelled hands,
She has a smile for him who owns broad lands,
And wears her nodding plumes with rare effect
In passing poverty with head erect.
She tries each would-be suitor in the scale—
That social scale, whose balance does not fail;
So much for wealth, so much for noble blood,
Deduct for age, or for some clinging mud.
Her daughters too, well tutored by her art,
All unreluctant in her game take part;
Or weakly passive, yield themselves to fate,
Knowing full well resistance is too late.
Thus are her victims to the altar led,
With shining robes and flowers upon the head.
There, at the holy shrine, 'mid sacred (?) vows,
She fancies heaven will bless what earth allows,
And sells her child to Mammon with a smile,
While Mephistopheles approves the style!

KENNEDY AT THE CAPE.

KENNEDY, the well-known Scottish vocalist, whose professional exploits along with those of his family we some time ago commemorated in an article styled 'Singing Round the World,' lately and unexpectedly paid us a visit. We had lost sight of him, and did not know where he was. 'Here I am once more,' said Kennedy, 'just arrived from the Cape.' 'The Cape! Have you been singing at the Cape?' 'Yes,' he replied; 'I have been singing the Scottish songs of Ramsay, Burns, and Tannahill, not only in the Cape Colony, but in Natal and other places in South Africa, among the Boers, Kaffirs, and Zulus; a famous excursion, the best I ever had.' 'Were all your family with you?' 'No; only my son David, and two daughters. Two of my sons have gone to Milan, to be educated as Italian Opera singers; no fear of them doing well.' 'And what do you propose to do next?' 'We are on the wing for Calcutta; intend to do India; there will be plenty there who would like to hear a good rousing Scottish sang to mind them of Langsyne. Good-bye; I must be off. My son, David, will send you his account of what we did at the Cape.' And so, gleefully, with a shake of the hand, Kennedy left us to go on his way singing. His life, we thought, must be vastly amusing. It might almost be said of him as of a well-known migratory bird:

Thou hast no sorrow in thy song,
No winter in thy year.

David's book, entitled 'Kennedy at the Cape,' is no great affair, but though plain, it is by no means an uninteresting narrative. There is something original and daring in the idea of a family-party going off to sing professionally in a country in which only a few widely scattered spots are reclaimed from the wilderness, and where travelling is still for the most part on an exceedingly rude scale. The roughing experienced in Australia, New Zealand, and Canada, was nothing in comparison with what had to be encountered in South

Africa. Yet, the party had no misgivings. They sailed from Dartmouth in one of the large and excellent steamers, on board which were several companies of soldiers bound for the Zulu war, and arrived at Cape-Town one bright sunny morning in March. Strange scene on landing. 'What a mixture of nationalities—all shades of colour, ranging from the deepest negro night, through twilight of half and quarter castes, to pure white European.' The grandeur of Table Mountain, towering over all, had an overpowering effect on the feelings.

With a groundwork of Dutch and Malays, there were so many English and Scotch among the inhabitants that the Kennedys were pretty sure of a cordial reception. They gave eleven entertainments, that were highly relished. 'The Scottish element,' says David, 'was very strong in our audiences; and we were told we had been the means of uniting our countrymen together, welding them, as it were, while under the warmth of Scottish sentiment and song.' A capital hint this for a method of curing social discords! Make everything pleasant with a fine old heart-stirring lyric! In all their wanderings, the Kennedys shrewdly look for places where there is a tolerable number of Scotch. They accordingly did not make a tour in the western district of the Cape Colony, 'thinking it would be altogether too Dutch for the Songs of Scotland.' Having finished Cape-Town, they sailed eastwards to Port-Elizabeth, in order to reach the far-off Diamond Fields, where they had every reason to expect an eminently successful run of entertainments.

Port-Elizabeth, or Algoa Bay as it is sometimes called, was found to be a nice town, new, well built, flourishing, with numerous mercantile establishments. So strong a force of Scotch here, that the Kennedys were never done shaking hands with old acquaintances. David says: 'I had no sooner landed than I met two young Scotch friends, both of whom had recently come out, and had got situations almost immediately. Here there is quite a colony of young Scotchmen,

many of whom have come out on three years' engagements. I was told the young men of the "Port" were very fast; and fastness here is an unpardonable sin. A young man is sent about his business pretty smartly if he misconducts himself. Steadiness is even more an essential here than in the old country. In South Africa, the man who cannot hold up his head respectably sinks like a stone.' Five concerts here in a very fine hall.

On the vocalists went northward to Grahams-town, named after the son of Graham of Fintry, the friend of Burns—distance eighty miles, chiefly by a narrow-gauge railway. At this town, the difficulties of travel commenced. A cart and a pair of horses were purchased to carry forward the party over hill and dale, the roads very bad, and often hardly any roads at all. Here and there they lodged for the night at a small inn, or at the farm-house of a Dutch Boer. With a short halt at King William's Town, they made a side-journey to a sea-port called East London, where they sang one night to a densely crowded house, the house consisting of a wooden building with a corrugated iron roof. Returning to King William's Town, the Kennedys pushed on a distance of thirty-two miles to Alice. Here, the only hall that could be obtained was a large store, the counter of which formed a platform. The seats for the audience were composed of planks resting on paraffin cases. The English clergyman lent a piano for the occasion. Near Alice is the mission educational establishment of Lovedale, which was found to be doing much good among the native Kaffirs.

As regards the Kaffirs, who were met with everywhere, they are given a good character for their industry and willingness to work for wages. The chief drawback on their advancement in civilised usages is polygamy, which is only another name for a species of slavery. The girls in a family are sold to be wives; the price paid for each being usually a couple of cows or oxen. The household servants are mostly young men, in negro nudity, or with but very scanty clothing. These dingy Kaffirs are handy fellows, clever at learning a business. They are useful as joiners, blacksmiths, printers, and other tradesmen. Specimens of their printing and book-binding at Lovedale received a bronze medal at the Paris Exhibition. Let us hope that through discreet missionary exertion, this promising race of blacks will be put in a fair way of attaining a creditable position among civilised communities.

The journey was now in an inland or northerly direction, at the rate of about thirty miles a day. At Burghersdorp, the vocalists gave an entertainment which was well attended. To accommodate the audience, chairs were borrowed from the stores, benches from the churches, lamps from the hotel, with tables for a platform. Of this place the author says: 'It possesses the most wonderful person we ever met—an editor who would not take payment for the advertisement in his paper, saying he would not do so, as he had been so delighted at having us visit the town.' Something, however, almost as wonderful occurred. A Dutch Boer refused payment for a night's lodging, saying he had been sufficiently requited by the singing of two or three Scottish songs.

The party made a short stay at Bloemfontein,

the chief town of the Orange Free State, virtually an English town in a Dutch Republic. Proceeding onward, they came upon an encampment of Doppers, a sect of severe religionists who have seceded from the Dutch Reformed Church. 'The Doppers are Old Testament Christians, and believed they were doing a good work in rooting out the Kaffir Canaanites from the land. Their manners and dress are as peculiar as their faith'—a coarse, sour, corduroyed set of people, not pleasant to have any dealings with. A curious account is given of the Nachtmall, or Holy Fair, of these gloomy ascetics, at which there seems to be an incongruous mixture of camp-cookery, feasting, religious observance, and mercantile transactions. Next day, by a stretch of fifty miles, the Kennedys drove into the far-famed Kimberley, in Griqua Land, the capital of the South African Diamond Diggings.

Kimberley, which is under British administration, dates from about 1871. It is situated on a bare desolate moor, four hundred and forty-four miles from Port-Elizabeth, and six hundred and fifty miles from Cape-Town. Kimberley is built entirely of corrugated iron. 'Streets and squares, with churches, hotels, banks, newspaper offices, canteens, theatres, shops, are all of iron. From centre to outskirts the town is a cluster of dwarf iron buildings. The house-tops present the depressing appearance of a closely packed crowd of umbrellas in a wet day. The houses are all of one story: a tailor, for instance, doing a flourishing business in a hut of half-a-dozen feet frontage; a doctor seeing patients in a consulting-room six feet by three.' The market square shews a vast variety of stores, full of native and imported articles. One store was occupied by scores of huge elephants' tusks, and rugs made of skins. A large trade is done in the shops. 'One butcher in fourteen and a half months killed fifteen thousand sheep and twenty-five thousand bullocks; in a miscellaneous store, I was told that sometimes three hundred pounds was taken before breakfast.' The Kennedys lived at the Queen's Hotel, which somewhat resembled a booth at a country fair, but was comfortable and well managed with a long dining-hall, along each side of which were small bedrooms like the berths in a steamer's saloon.

The account of the great diamond mine, which has been the attraction to the spot from nearly all the countries in the world, is the best in the book. We can present only a few particulars. The mine is an enormously large dug-out hole, bearing a resemblance to the crater of a volcano. 'It is shaped like a bowl, has sloping sides of light-coloured rock stretching down to the blue diamondiferous soil at the bottom. Such is the expanse of the mine, that in the first hasty glance you may actually fail to note for a few moments that it is alive with human beings; but there are more men than would people half-a-dozen villages. The claims lie clearly spread out like a map—an expanse of small blocks, which do not look to be thirty feet square. You see the blacks busily toiling, shovelling on the edge of a steep precipice here, climbing up naked pillars of earth there. Square pools of water gleam in several places, and walls of dark-blue clay cross and recross the whole bed of the mine. Round the margin of this deep bowl circles a fringe of steam-machinery, working the buckets that run up and down on wires, and

convey the "blue," or diamondiferous soil to the surface.'

Repeated visits were made to this extraordinary scene. The mine, we are told, is three hundred feet deep, and three-quarters of a mile in circumference. The Dutch farm on which it was discovered was bought originally for six thousand pounds; and it could not now be purchased for four million pounds. The blue clay in which the diamonds are found is so hard that it has to be picked, quarried, and blasted like a rock. When brought to the surface, the blue is carted off and spread out, to be desiccated by exposure to the action of rain, or by having water, a dear article at Kimberley, poured upon it. Being then washed in troughs, the diamonds fall to the bottom. Great numbers of Kaffirs are employed. They work well, but amidst temptations, are said not to be particularly honest; for they are sharp at secreted diamonds in their mouth and selling them to brokers; but such tricks when discovered are dealt with very severely. The gathering together of thousands of people eager in pursuit of gain is not quite pleasant to think of. But there is a redeeming feature in this exhibition of mammon-worship. The diamond mines of Kimberley are a vast agency of civilisation among the native races. They learn the language and the usages of the white men, and they carry away with them money and articles of comfort for their families. 'The people know,' says our author, 'that the diamond fields electrified a half-dead continent into prosperity.' Kimberley may not present a satisfactory picture of thrift or moral propriety; but let us leave the loafers, the tipplers, and the gamblers nearer home to throw the first stone.

Even though living in small houses of sheet-iron, the community is not devoid of taste. 'Not the least of the marvels of Kimberley is the manner in which some of the people have rendered the interior of their homes comfortable and charming; in some cases, ornamenting them with choice works of art, pictures, vases, recherche furniture, and invariably an elegant piano, on which you hear perhaps a sonata of Beethoven or the latest comic opera of Sullivan. We dined one evening at the house of a gentleman who entertained us with a repast that would have graced any club in Pall Mall, and which was served by coloured "boys" in a quiet yet expeditious style that would have pleased the most fastidious gourmand.'

Situated far from the coast, in an arid desert, this curiously extemporised town, or more properly encampment, has many difficulties to contend with. Except, perhaps, butcher-meat, articles of ordinary consumption have to be brought hundreds of miles over bad roads by bullock-wagons. We are told that brown sugar has sometimes cost 2s. 6d. a pound. When the Kennedys were at Kimberley, eggs were selling at from 5s. to 6s. a dozen. Firewood is particularly dear; but it is never very cold; no fires are required save for cooking. Water costs 4s. for a large, and 2s. 6d. for a small barrel. Last year, when there was a drought, a small cask of water cost 10s. Milk and potatoes are always dear. The charges for washing linen are from 8s. to 10s. a dozen. Bread is sold at 1s. a pound. Furniture, clothing, luxuries of all sorts expensive, in consequence of the tedious land-carriage; for, says Kennedy, 'even the very town itself, in the shape of planks

and sheets of iron, has been hauled by bullocks over many a thirsty plain and toilsome hill to this far lone-lying spot.' Railway transit would remedy all this; but will the diggings last? If diamonds cease to be found, the town would probably disappear. We do not think there is much chance of any exhaustion of the diamond deposits, but apparently some apprehensions on the subject prevent the outlay of capital to secure railway communication.

The vocalists were favoured with a sight of several small bagfuls of diamonds in the rough condition in which they were dug from the mine. The value of a few put into their hand was said to be two to three thousand pounds. The Kimberley mine has proved the most productive of diamonds in South Africa. Up till the end of 1878, the yield was valued at L.12,000,000. All the 'Cape diamonds,' as they are usually called, possess a slight tinge of yellow, which distinguishes them from the old and purely white diamonds of India. Yet, the Cape diamonds, though of less value commercially, rival the Indian gems in lustre, particularly when displayed under an artificial light, and they are alleged to be equally hard. The export from the various mines in South Africa must be enormous. Other precious stones, such as agates, garnets, amethysts, and jaspers, are found in various localities. The whole, we believe, are sent to Europe to be cut and put upon the market. The art of cutting diamonds, which has been long monopolised by Amsterdam, has lately been successfully introduced into London. South Africa is also rich in iron ores, coal, and other minerals, wherefore it may be said to have a great future to look forward to. 'The Cape,' to give the country generally, that name, may be deemed one of the bright jewels in the English Crown.

The Kennedys, as they expected, found a strong Scotch element in Kimberley, and drew around them a circle of appreciative supporters. They performed in the Theatre Royal, which is used temporarily as a Scotch church every Sunday, a pulpit being fitted up on the stage. The songs of Burns were received with rapturous applause. The vocalists sang ten nights, and this was not long enough to exhaust the enthusiasm that had been evoked. In no other town in any part of the globe had the party been so successful. On departure, they were escorted by a cavalcade of Scotch friends for a distance of eighteen miles. When the 'good-bye' was spoken, 'the last link was broken with Kimberley, the most remarkable spot on the face of the earth.'

Elated, yet sorrowful, the vocalists went on their way towards Natal, singing at different places to respectable audiences. One day when the cart was crossing a deep 'spruit,' or gully, there was a violent jolt, which sent our friend, Kennedy *per* into the air. Before he fell, visions of an amputation and a wooden leg flashed through his brain, and he had sufficient presence of mind to avoid such a catastrophe. Carefully he rolled over, and escaped the wheel by a hairbreadth. A clever feat. We are reminded of the story of a gentleman, a vocalist, who prided himself on the excellence of his note G. Happening to be pitched with other passengers from the top of a stage-coach, his only consideration while flying through the air was that his G might not be damaged

by the accident. The first thing he did, therefore, on being able to sit up in the mud, was to sound his G, which he happily found to be uninjured. Kennedy was equally fortunate. He landed flat on his back in the water, and sustained no other inconvenience than that of being wetted and dragged with mud. At Durban and Maritzburg, where evidences of the Zulu war fell under notice, the singers had good houses. The last entertainment at Maritzburg was honoured by the presence of the Mayor and Town Council; and a number of enthusiastic Scotsmen publicly presented Mr Kennedy with an address and a splendid diamond ring—'an appropriate souvenir of a kindly colony.'

Returning to Cape-Town, the tour in South Africa was closed by a 'farewell performance to a splendid audience.' The party had travelled 1360 miles of colonial roads, and 1800 miles of colonial waters, 3160 miles in all. They had given 82 performances, singing in 24 towns. Including the voyages from England and back from the Cape, the Kennedys in a professional excursion of six months travelled 17,160 miles. We may be permitted to say in conclusion, that in their extensive and adventurous round they had communicated much harmless if not profitable enjoyment to many groups of exiles from the land of their birth and others; and that in itself must be a source of gratification, independently of the more solid rewards of exertion. But there is something besides. A professional tour like that of the Kennedys, by stimulating patriotic emotions, has a political significance in confirming colonial attachments to the mother-country. We accordingly look upon our old friend with his accomplished family as in a sense messengers of peace and goodwill throughout the widespread realms of Queen Victoria.

W. C.

A SHADOWY STORY.

A TALE OF THE IRISH REBELLION OF '98.

IN FOUR CHAPTERS.—CHAPTER II.

LIEUTENANT WESTBURY was out with his men early the next day, and once more returned tired and fretful from a fruitless tramp over dreary bogs and waste moorland. It was therefore to a late and solitary breakfast he returned. The only meal at which he joined the family was dinner (in these days the hour was half-past one), and the geniality and warmth displayed there were of such a character as to induce him frequently to wish that he might take that meal too, in solitude. Mrs Decroy, the head of the household, was simply unapproachable; she never even made a pretence of being civil to the alien soldier, never spoke to him save when compelled, and may almost be said to have looked, spoken, and acted as if to prove to the Lieutenant that she ignored his very existence. Mrs Claridge the widow was, like the second bear in the well-known nursery tale, a little better than the first bear, but only a little, inasmuch as she could more readily conceal her dislike, from her having the children by her side, and could easily feign to be so absorbed in them as to be unable to pay any attention to the stranger. As for Miss

Kate Decroy, the foregoing brief sketch of the behaviour of her mother and sister will prepare the reader to hear that what little conversation Westbury held with the family was through the medium of that young lady, who was nevertheless the hottest rebel of the whole, and ventured on such spiteful anti-Saxon speeches that the Lieutenant could scarce conceal a smile. It was well for Kate and her friends that it was a smile which her treasonable outbreaks provoked.

On this morning, as we have already said, Westbury returned tired and worried. The tramp had been unsuccessful as usual; yet his spies assured him—and there was an indefinable rumour afloat to the same purport—that a messenger from France had got through the lines, and had brought a supply of money to the fugitives, who were certainly in hiding somewhere in the district; and it was further said that a foreign ship was soon to be off the coast. His breakfast, late as it was, was duly served, partly by the occasional handmaid of the establishment, one Judith Reilly; but—as was always a point of honour with the family—one of the ladies came to see if all were to the Lieutenant's satisfaction. He had been long enough in the house to know that it was not the step of Judith he heard approaching the door, and his eye brightened as the lock turned; but it would have amused any third party to have seen how immediately the expression of his face changed when the cold stern features of Mrs Claridge met his eyes. In answer to the stereotyped inquiries, Westbury returned the stereotyped answers; and much to his relief, the lady left him without saying a word about the little overnight loan to Biddy. He had been afraid they would mention it, from their fastidious reluctance to accept the slightest favour from the hands of an English officer. He was very desirous of asking after Miss Kate; and he argued that to express a hope that her absence was not due to ill-health could scarcely be deemed going any very great lengths in the way of friendly intimacy; yet he could not do it. There had been such a total absence of the least pretence—to say nothing of the reality—of friendly intercourse, that his courage failed him.

More than once Westbury rose from the table and took a searching glance at the inner window, speculating as to what shadow it could have been that fell across his chess-board on the previous night, and trying to recall exactly how the rays of the two lamps affected the objects in his room.

'Pshaw!' he said at length. 'I must have made a mistake; and there's the end of it. Now I come to think of it, I was very dull and drowsy, and perhaps I dozed a little—"perchance," as Shakspeare says, "I"—Umph!' The tone of the conclusion of the Lieutenant's reverie was scarcely so assured as that of the commencement, and was rather that of a man who accepted a solution, none better being obtainable, than that of one who has much confidence in it.

It was his habit each morning to go round to the various houses at which his men were billeted

to see that all was right, and to see them mustered by the sergeant-major. This ceremony took place on a ragged green patch at one end of the village, and strangely enough—or so it seemed to the English portion of the little corps—attracted no idlers, as it would have done in most places. A few children came, but not even these always, and indeed on the rare occasions when any of their elders assembled, their looks and mutterings were not reassuring to the military. Accourting himself for this duty, the Lieutenant was leaving the House, when he met Biddy at the door. The door often stood open, and so far as Westbury could see, every person in the village considered that he or she had a perfect right to pass its threshold at any time. Her aspect was weary-looking and bedraggled. Her rusty black dress, which was as short as an ordinary petticoat, was almost covered with mud, while her shoeless and stockingless feet and limbs were nearly as though they had been plastered with clay for moulding. She had evidently been wet through, and the streams of rain which had run so plentifully down her face, had produced just the reverse effect to that which water is generally intended to have—it had made her dirtier instead of cleaner.

Biddy gave a perceptible start as Westbury came suddenly upon her from his room at the side of the hall. 'Good-morning, Biddy,' said the soldier kindly, overcoming his dislike to the woman for the sake of her patroness. 'You must certainly have been out on the moors to-day, like myself.'

'The mures! Is it the bog-counthry ye mane?' exclaimed Biddy. 'Och! it's meself ye wouldn't find there. It's afther a neighbour's cow I've been all this blessed mornin'! an' a swate dance she's threatened me to; that's all, yer honour.'

'Quite enough too, I daresay, Biddy,' said Westbury good-humouredly, and passed on.

His brief inspection duly made, the officer returned to Boreen House, after a discussion with Sergeant-major Dickles, wherein the latter gave it as his opinion that the rebels must be aided by the Evil One himself, or they never could escape such excellently laid plots as were set on foot to capture them. Indeed, Westbury himself, as he walked away, began to think that if the Prince of Darkness did not assist the men of the bogs, they must have some potent allies somewhere, and his mind involuntarily recurred to Biddy and her travel-stained appearance. He thought of her until he began very much to doubt her story about the neighbour's cow, and to wish he had detained and searched her. He was still pondering over the perplexing affair when he reached his quarters, and in a few minutes was with the family at dinner. Miss Kate was there, and looking better than ever. There was no doubt about that, for there was a glow and freshness on her cheek which can only be given by exercise in the open air; and while the Lieutenant felt that he admired her more, he also made up his mind that she had been for a ride on the moors that morning, and then, somehow, the image of Biddy Quin connected itself with the fancy. Westbury sat near to Madame Decroy; and before they left the table, the old lady, who had not spoken a single word to him, beyond the one or two sentences which rose inevitably during the course of the meal, took occasion to deliberately produce her purse, and with a

formal acknowledgment of his kindness to Biddy, proffered a guinea in repayment of the loan. The Lieutenant had not sufficient change, and Mrs Claridge was appealed to, but she had only gold; and then Kate was asked. As she happened to have three shillings in silver, and the old lady had one, the required amount was made up, which with a few more formal words of thanks, was handed to the officer. With a little confusion, Westbury accepted the money, stammering out a few words as he did so; and at the same moment he glanced almost instinctively at Miss Decroy, who he found was watching him closely. The colour rose in the girl's cheeks as her eye met that of the soldier, and altogether there was a strange and disproportionate amount of awkwardness over this trifling incident.

It was not until he had returned to his own room that the Lieutenant was struck by the strangeness of there being money in the House to pay him—and a good deal to spare—that morning, when there had been none on the previous night. He was quite sure no letter had come, for the military had a practice in those days of carefully noting everything which came through the post-office. Then how did they get the money? This was a more serious question to him, as the commander of the detachment, than it would have been to an ordinary stranger; and again the image of Biddy presented itself, as he recollected her splashed and drenched appearance, her start at seeing him, and the scarcely satisfactory explanation she had volunteered.

The day had cleared up a little, and the sun peeped out now and then; so Westbury left the house and sauntered to and fro on the waste land adjacent, pondering over these things, and thinking a good deal, it must also be owned, of Miss Kate Decroy. While he was thus engaged, his next in command, the sergeant-major, came up. That worthy was on his way to the House with some return or report which it was his duty to make daily; but seeing his officer enjoying a cigar in the open air, had crossed over to him.

'Well, Dickles,' said Westbury, 'so we have had another useless trip. Our old luck.'

'We shall catch them yet, sir,' returned the sergeant-major. 'We pretty well know who to look after now.'

'Is there anything fresh, then?' asked Westbury.

'You won't think it altogether fresh, I suppose, sir,' returned the other, 'because it's not a new thing with the party in question. But O'Flynn and Mullany have both come in, and they say it's certain that a messenger has got through with a large supply of money'—

'Of money!' ejaculated the officer.

'Certainly, sir,' returned Dickles. 'Rebels or no rebels, they can't get on without that; but the question is: Who took it to them? Well sir, the answer to that is, old Biddy Quin. You must know her, sir; she is often at the House. Well sir, O'Flynn has heard of her being seen by a cotter at daybreak this morning five miles on the road to Tareilly [this was the seaport previously spoken of]; and Mullany saw her nearly as far out upon the bogs at ten o'clock.'

'Well,' said Westbury, 'how do they connect this with the money?'

'Easily, sir,' replied the sergeant-major. 'She

that the Frenchman, or whoever he was that brought the money, and who dared not come through the lines; and she walked twenty miles this morning through all that rain. She knew where to find the rebels, although we don't; and she did find them, and gave the supplies.'

'But the money was in English gold and English silver,' said Westbury, half-musingly.

'Very likely, sir,' returned Dickles. 'It is as easy for them to get that as any other gold, I suppose. But have you had any information, sir?'

Westbury laughed off the question, but was fain to turn away to hide the annoyance he felt at having been outwitted by those whom it was his duty to secure.

Dickles lingered after his official business was ended; and the Lieutenant, who knew the man's ways, was certain there was something yet to come; and he was right.

'There is one thing I think I should mention, sir,' said the sergeant, 'and that is, that Mullany swears he saw Mr Decroy yesterday.'

'Impossible!' exclaimed the Lieutenant.

'So I should have said, sir,' continued Dickles. 'But who knows? Mullany—he is a rank bad one, I know; but he is the cleverest spy that ever lived—says he believes the Squire is as often in Boreen House as out of it.'

'In Boreen House!' echoed Westbury. 'The man must be drunk or crazy! Why, we have all heard that Squire Decroy escaped to France.'

'Quite true, sir,' said the other; 'we heard it; but the report may have been only a blind. He says too'—The non-commissioned officer stopped rather abruptly here, and threw a curious sidelong glance at his superior.

'What does he say?' demanded the Lieutenant.

'He says,' resumed Dickles, 'that he believes Miss Kate Decroy rode out on the moors this morning, and brought some money and letters into the village; for the priest has got the needful to-day, and he hadn't a brass farthing yesterday. The same with the family at the House. And besides, news has come into the village that never came through the post. Mullany thinks that they considered Biddy more likely to be suspected than the young lady, and so they each brought some, for fear of accidents.'

'Humph! That will do, Dickles,' returned Westbury. 'I will think over what you have told me.' The officer was perfectly justified in giving this promise, as he could think of nothing besides; and long after the sergeant-major had left him, he continued his solitary patrol, and was obliged to admit, on piecing together all the scraps of evidence, that the spy's conjecture was very likely to be the correct one.

The day wore on as other days before it had waned, and at the accustomed hour the Lieutenant saw Miss Decroy. He could not help regarding her a little more earnestly than usual, and he thought she seemed hardly to meet his gaze with her usual steadiness. He spoke to her on some indifferent subjects; but she did not appear to be disposed to enter into any conversation, and soon left him; and then his long dreary evening began again. Many men in his position, especially at that period, would have forced themselves on the family circle; and they had the power for good or evil so much in their hands, that it would have been difficult to isolate him, if he had chosen

otherwise. But though Westbury strove to do his duty loyally to king and country, he had refrained from unnecessarily intruding upon the privacy of the family upon whom he was quartered. In some respects he was as shy and timid as a girl—when he met the frank fearless eye of Kate Decroy, he felt that he was stupidly timid—and so are more soldiers, and sailors too, than is commonly supposed.

The lights were placed as usual, and Westbury's solitary evening commenced. Again he read, and again he placed his chessmen; but now he did it more as part of a set purpose, and the furtive glance he threw from time to time at the inner window, through which the bedroom lamp was shining, told what was in his mind. It was in vain. No sudden shadow on this evening fell across the table, and the most attentive listening could not detect the slightest sound calculated to disturb. At last, tired of the fruitless watch, he rose, and moving the curtain of his outer window, looked out upon the open country. The weather had changed, and the night was beautiful. The moon, now at the full, shone brilliantly in the centre of a deep blue sky, on which scarce even a spot of fleece could be seen; and beneath her rays, even the waste and broken land which stretched away to the barren bog district, took a softness and beauty which was not its own by daylight; and the few trees, black and stunted as they appeared by day, were now silvered by the moonbeams, and thrown into picturesque light and shade. 'All's quiet to-night,' muttered the soldier; 'and I am growing nervous with moping my evenings away like this. I will step outside for half an hour.' In another minute he had kept his resolve, and, cigar in mouth, was sauntering slowly from the village.

He had not gone a furlong before his quick eye—which even in his leisure moments did not neglect the watchfulness which years of danger and trained vigilance had made habitual to him—detected a female figure, black in the bright moonlight, coming towards him. In those days and in that place, the chances were that those abroad at such a time were on no specially loyal errand, and he therefore prepared to accost the comer. As he did so, he felt the pistols in his belt. Not a needless precaution; for the cloak and hood of a woman were then often used to disguise some desperate outlaw, one perhaps on whose head a price was set. As the figure approached, it hesitated, and seemed inclined to turn back or move from the road. This at once decided Westbury, who walked swiftly forward; whereupon the stranger, perceiving that flight was useless, advanced slowly towards him. As they drew near, the officer challenged: 'You walk late. Where do you come from?'

'Is it then such a crime for an Irishwoman to be abroad in the moonlight?'

'Miss Decroy!' exclaimed Westbury. 'Pray, forgive me if I have startled you, or been harsh in my speech.'

It was Miss Kate Decroy; and as though she felt that anything like concealment was beneath her, she partially threw back her hood and gazed full and steadily at the officer. But the steadiness was only for an instant; the moonlight enabled Westbury to see her eyes fill, and to note that the traces of recent tears were on her cheek. He raised his

cap, and turned to leave her, as unwilling to intrude on her distress, whatever it might be; but on second thoughts, he returned to her side: 'Pardon me, Miss Decroy, if I am intrusive. I assure you I do not wish to be so. It would be folly, it would perhaps be wrong for me to pretend that I do not see you are in grief, perhaps in trouble, in some trouble which I can at least assist in removing.'

She turned her face towards him, and shook her head.

'These times are so disturbed,' he continued, 'that I can easily understand how from many sources troubles may arise; especially to—to'—He deemed it best to leave this sentence unfinished, and to begin another. 'I hope you will believe me when I say that if my influence can aid any of the family at Boreen House, or if any exertions I can use—or'—Neither did he find it easy to finish this sentence, so, like its predecessor, it remained incomplete.

'I know what Lieutenant Westbury would say,' returned Miss Decroy; 'and he would add that if his purse could aid the almost beggared family there, it should do so. You are very kind. I mean that,' she continued in a somewhat changed tone, 'we all know it; and in spite of all we may shew to the contrary, we appreciate your generous, your delicate kindness very much; and are thankful that you of all men have been selected to—if we were to have'—Miss Decroy appeared in her turn to labour under a difficulty in finishing her sentences, and they walked on in silence for a few yards.

'It would give me great pleasure,' said Westbury at last, 'if you would allow me to be of any service whatever to you. I wish you to believe, Miss Decroy, that even the fulfilment of his duty by an English soldier is compatible with feelings of—of admiration for the patient heroism of those who have to endure the reverses and sorrows which—as I have seen in more than one country—always follow war.'

To this somewhat lengthy speech, Miss Decroy gave no immediate reply, but turned and looked at Westbury with a more wistful and searching glance than he had ever seen her wear before. He thought for a moment she was about to make an appeal to him; but the expression changed, and then the face was averted.

'I can only again thank you for your sympathy, Mr Westbury,' she said. 'I am not so unjust as to identify the individual with the wrongs—But this is growing rebellious,' she added with a laugh, as though glad of an excuse for changing the hazardous key in which the conversation had been pitched; 'and I must not forget after all that you are a king's officer.'

By this time they had arrived at the House; and although for an instant a wild thought flashed through Westbury's mind, and he wished he could summon up courage to ask her—under pretext of the extreme beauty of the night—to extend her walk, yet he could not summon up the requisite courage. The opportunity was gone, and they entered.

Never before had the little room in which Westbury usually sat, looked so lonely, so dolefully dull and void, as it did to-night; his books, his chess-board, even his cigar-case had lost all charm for him; while, as we have before said, he

was too temperate a man by taste and habit to find solace in a resource which is often but too freely used. 'I shall have that old Dickles here directly, I suppose,' said the officer, musingly; 'and I wonder what mare's-nest will be provided for to-morrow morning. Some loyal farmer—or farmer who wishes to be thought loyal, not that the class is very numerous—or some spy will shew that he earns his money; anything will do. A report comes in, and three hundred men will be set to practise bog-trotting for half a day.—Ay, ay, there's old Dickles, punctual as—Confound it, and the guard too! What's up now?' The officer rose from his seat as he spoke, with all the listlessness and sarcastic jocularity banished from his face; for the slightest incident varying from the regular routine was enough to startle, and might be the forerunner of serious movements.

Sure enough, as he listened he heard the tramp of soldiers; there was no mistaking their measured tread; and he could hear that the party divided and marched past on each side of the House. He then heard the sergeant's voice in the hall; there was a tap at his door, and then Dickles entered.

'Anything astir, Dickles?' demanded his officer. 'I fancied I could hear you had some men with you.'

'Yes sir,' was the reply. 'There is news of very great importance; and I thought I had better bring the next guard up with me, before they went on duty.'

This was a force of ten men, as Westbury of course knew.

'Well, what is the news?' said the Lieutenant.

Dickles carefully closed the door before replying, and stepped nearer to his superior, and even then he took the precaution to lower his voice as he said: 'It is beyond all doubt, sir, that Mr Decroy has been seen in the village this afternoon. Mullany passed close to him. He was disguised, but Mullany knew him.'

'Mullany! You can't expect me to believe all that such a fellow chooses to invent!' exclaimed Westbury. 'See what useless chases he has led us over and over again.'

'You are right, sir,' assented Dickles, 'quite right; and there's not a man in the company would believe him on his oath. But he is on the scent this time. O'Flynn isn't quite so bad as him, and he has got the news from some quarter. A decent fellow too, who came in with potatoes and so on to sell this afternoon, says he is almost certain he met him.'

'But why did not Mullany arrest Mr Decroy, if he knew him?' asked Westbury, 'and so get the five hundred guineas. Surely he would arrest his own father for half the money.'

'Not a doubt about that, sir,' said Dickles, with considerable emphasis. 'But he says there were two of them together; and even if there weren't, he's too much of a coward to run the risk of a fight where he hadn't five to one on his side.'

'Well, what do you propose for us to do?' asked the Lieutenant, after a little pause.

'I brought the men up, sir, to surround the House, because Decroy may be in it at this moment.'

'In this house!' exclaimed Westbury.

'Yes sir, it's not impossible. If he is, and takes any alarm, he'll try to escape; but I have sent two men to each side, four to the back, and two are inside the front-door at this moment. As we are not certain about it, and as the family might be alarmed, I thought you would perhaps prefer to go over the inside of the House yourself.'

'Thank you for your thoughtfulness, Dickles; I should prefer it,' returned the Lieutenant. 'I will be with you in a moment.' And as he spoke he rapidly buckled on his sword-belt, which he had thrown off on entering the room, and took up his pistols. Stepping from his room into the hall, he found, as Dickles had told him, two of the militia, leaning with grounded muskets at the door, so that no one could pass without their permission; and clustered in the hall, in a state of wonder and alarm, were Madame Decroy, Mrs Claridge, Miss Kate, and Biddy Quin. At sight of the officer the soldiers recovered their arms, while the group in the hall turned inquiringly towards him. He then, as briefly as was possible, informed them of the search it was his painful duty to make.

FROST-PHENOMENA.

SOME few people may perhaps have remarked and remembered an unusual meteorological phenomenon which occurred in London last Christmas night. We had had several weeks of hard frost, and the cold on Christmas morning was rendered more piercing than ever by a bitter east wind, though indications of an approaching thaw were not wanting. About the middle of the day, snow began to fall; but in the evening this changed to rain, which froze as it came down; and by ten o'clock not only were the pavements covered with a sheet of slippery ice, but walls, lamp-posts, railings, &c. were all glazed in like manner. Every object upon which the eye rested glittered and sparkled, looking as if it had received a sudden coating of glass; while from every roof and ledge hung a fringe of icicles, some of them as much as a foot in length. In the morning, the whole fairy-like appearance had vanished.

This sort of thing does not often occur in England, and when it does, it lasts but a few hours at the outside; but in certain latitudes, the requisite meteorological conditions sometimes continue for days and even weeks together, and then the results are most disastrous. The rain continues to fall, and to freeze as it falls; and the crust of ice grows thicker and thicker, until tall trees and miles of telegraph wire are broken down by the enormous weight. Fortunately, the phenomenon is generally arrested before it attains this extreme degree of development; and when it does occur, seems to be almost entirely confined to the steppes of Southern Russia.

It may be remembered that during the winter of 1876-7, frequent references were made in the newspapers to the state of the South Russian telegraph lines, many of which, especially those in the governments of Kherson and Taurida,

were rendered perfectly useless for weeks by just such an accumulation of ice as we have been describing. A German gentleman, Herr Bernhard Bajohr, happened to be journeying from Nicolajew to Berislaw about the middle of December, when things were at their worst; and as the phenomena are seldom seen so fully developed, even in Russia, as they were at that time, it may be worth while to give some account of what he saw. His road lay between two telegraph lines; one the Indo-European, the other that of the Russian government, so that he had ample opportunity of observing and comparing the different effects produced upon the two. But before describing these, we must say something as to the meteorological conditions required for the formation of this peculiar ice-incrustation.

In long-continued and severe frost, the earth is frequently chilled to a considerable depth, and to such a degree that it absorbs the warmth from the lowermost stratum of air, which becomes icily cold in consequence; while the trees, buildings, &c. within the cold stratum naturally share the surrounding temperature. This cold stratum may be from twenty to forty feet in thickness, while the air above is many degrees warmer. If rain fall from these warmer regions, though there will not be time for it to freeze during its short passage through the colder air, yet directly it touches the ground or any other ice-cold substance, it will congeal at once, and cover it, whatever it be, with a glaze of transparent ice, as noticed above. Herr Bajohr observed that when the ice first began to form upon the telegraph wire, it was in the shape of a cylindrical roll, which instead of hanging from the wire, or being crystallised round it, as one would have expected, merely rested upon it, the wire touching its lower circumference only. As rain continued to fall, the cylinder increased in size, until its diameter measured from half an inch to three inches. This was the first stage of development; but then the intensity of the cold abated somewhat, and the rain which was still falling, instead of freezing the moment it touched the roll of ice, had time to trickle over it, and form long rows of icicles, remarkable for their regularity and uniformity. This was the second stage, and the heavily laden wires looked like nothing so much as gigantic combs.

It is not often that the third stage of development is reached; but it does sometimes happen that when icicles and cylinder have attained their full size, the rain ceases, the sky clears, and the sun begins to shine. Its rays are much too feeble to melt the ice; but they pass through it to the more sensitive black wire within, whose temperature is so much raised that it melts the particles of ice in immediate contact with itself; its cohesion with the heavy roll of ice above is destroyed, and the latter, unable any longer to maintain its balance, twists round so as to describe a semi-circle and exactly reverse its position. The icicles now stand up in the air above the wire, while the roll hangs below it; and if there should be more rain, a second row of icicles will be formed opposite the first, producing a striking resemblance to the

backbone of a fish, which is rendered still more perfect if there happens to be any wind blowing in the direction of the telegraph line, as in that case both rows of icicles will be slightly inclined towards the wire in the same direction. This last stage of development may also be attained without rain, should the sun have sufficient power to melt some of the ice; the water from which will then trickle down to the under-side of the roll of ice, and there form icicles in a similar manner. As the sun gains in power, the wire increases in temperature, and melts away more of the ice from within; the icicles, borne down by their own weight, drop lower and lower, until the wire reaches the extreme points of the upper row, when of course the whole congealed mass soon drops off.

Herr Bajohr noticed that the effect produced by this phenomenon on the two lines of telegraph differed considerably, that of the Russian government suffering far more than the other. The posts of the Indo-European line are of iron, and the conducting-wires are thick and strong; and though the wire was considerably stretched, it had on the whole borne well the immense strain put upon it. Here and there, where the line made a bend, the post at the angle, firmly fixed though it was, had sometimes given way, and wherever this was the case, several of the neighbouring posts had also succumbed. But the government line, with its oaken posts and four thin wires, running parallel with the Indo-European line, presented a much more dismal appearance. The oaken posts, somewhat crooked to begin with, had not all proved strong enough to sustain the weight of the four heavily laden wires, and in some places had broken down altogether; while, where they remained erect, the wires were either broken, or completely weighed to the ground by the burden laid upon them. All the posts, both iron and oaken, were covered on the windward side with a crust of ice several inches thick, reaching from the ground to the insulators, where it joined the ice on the wires; and in this way insulation was destroyed, and each post was converted into a conductor, down which the electric current passed into the ground. This was especially the case directly the extreme severity of the weather abated and the ice became less dry. But the iron posts had this marked advantage over the wooden ones, that whereas the latter kept their coating of ice for weeks, these others threw it off directly the sun began to shine. Being black, they absorbed heat more readily, and by melting the inner surface of the ice, soon caused the whole to crumple up and fall off.

In conclusion, it remains for us to say a few words as to the effects of this remarkable frost-phenomenon upon the vegetable world. Trees are everywhere scarce in the steppes, their cultivation being attended with very great difficulty; nor is this to be wondered at when one considers the various climatic influences to which they are subject. During the winter of which we have been speaking, every tree, every branch, every smallest twig was incrustated with ice one, two, or three inches thick; and accordingly the trees in the town of Kherson, chiefly white acacias, lost nearly all their branches, while many of the smaller ones were completely crushed to the earth.

Of the fruit-trees, all of which looked as if they were made of glass, some suffered more, some less, according to the character of their growth. The apple-trees and apricots for instance, with their spreading horizontal branches, were for the most part quite broken down; while the more erect-growing pear-trees and cherries had maintained their balance better and suffered much less in comparison.

CHRYsalis.

IN FOUR CHAPTERS.—CHAPTER I.

‘NOWHERE to go, old man? Come down with me. It will be dull enough certainly; but nothing is so dull as Christmas by one’s-self in town. Will you come?’

‘I think so. It’s very kind of you to ask me. I never felt so thoroughly “blue” in my life. Isn’t it always so?’ continued Lewis Hogarth, as he took his friend’s arm and turned with him out of damp muddy Pall-mall into the comfortable warmth of the Junior Carlton. ‘If we have waited and hoped for anything through year after year, it seems of no value when we have it at last; and we almost wish to be back to the time when we were hoping and waiting, without the unpleasant feeling of satiety.’

‘Yet such an acquisition as yours is scarcely likely to lose its charms so quickly, Sir Lewis,’ said his companion, laughing.

George Wynne was a somewhat older, graver man than the friend he had just invited to his home; a little on the wrong side of thirty; of middle height, and unpretending appearance, with one of those calm true faces which bear an expression of strength and self-reliance, and unknowingly inspire trust. The other was tall and dark, scarcely handsome perhaps, but with a certain nobility of countenance, and a winning manner which earned him many friends.

He gave a pretended shudder at the last two words. ‘How sick I am of the sound of this new title of mine! I seem to hear nothing else. My groom repeats it in such an exasperating manner, that I threatened to discharge him yesterday. I tell you, Wynne, I am thoroughly tired of it! If this money had come to me five years ago, you know what a godsend it would have been; but now, what does it matter? Last year I came into enough to set up a yacht and keep my hunter, without feeling myself in hourly danger of being obliged to cross the Channel and end my days as one of the *vauriens* of Boulogne. I really was contented.’ And now, a fortnight ago, in the midst of a delightful cruise among the Greek islands, I am called home to England to attend my uncle’s funeral; arrive too late, owing to being nearly smashed in a railway accident on the way to Paris; am received by a weeping aunt and five ditto maiden cousins, meekly requesting three months’ time to turn out of that gloomy ghost-haunted structure, where my ancestors glare at one from every corner, and the

rate carouse behind the wainscot. To be overwhelmed with piles of accounts and musty letters, made to interview grim-looking keepers and bailiffs, all Sir Lewis'ing me! Lectured upon my duties as a landlord, and patted on the head by scores of horrid old villagers, who told me how I had grown, and how they remembered me in petticoats! It was really too much. Of course I couldn't stay down there; and as all my friends have made up their parties for this festive season, I am left in the lurch, and the fog.'

'And you are coming down to enliven us,' said George Wynne. 'We shall be very quiet; only my brother-in-law and three children, and my sister.'

'But I thought your sister'—

'You are thinking of the married one, poor Florence. You do not know my younger sister. Well, I shall expect you at the station to-morrow, 2.25 train. At present I have an engagement, and must run away.'

The new baronet was left looking out over the miry pavement, where a few men hurried along in overcoats, and water-proofed women, exhibiting a good deal of thick boot, struggled on through the driving rain from their visit to the Christmas-decked shops.

'Cheerful season!' muttered Lewis, for to him the festival was little else than a name. Early left an orphan, he had only been as a guest, an outsider in its social gatherings and happy reminiscences; so it all seemed very wearisome and dull. And as he looked back over his checkered life, he wondered what would be the end. He thought of the bright days of his boyhood, the sad struggles with poverty which were his when he grew to man's estate; the careless, useless life when he had partially surmounted them, rendering of no avail the talents God had given him, because the love which had lighted him onwards was quenched by the chill hand of death; of the pure desire and purpose that love had given to his life, and which for years after its loss, had made him wayward and careless. And now that his mind had regained its balance, now that he was once more ready for the conflict, the rusted talents needed no brightening, the new-found energy was useless, for a life of ease and pleasure lay before him. What he wanted, he could stretch out his hand and take. So it was that, ten days before Christmas, he accepted his friend's invitation to accompany him to the little fishing-village down on the south coast.

The next day, in the misty evening, the two drove up to the lodge-gates of George Wynne's home. It had originally been a farm-house, but enlarged from time to time; and with the ancient lichened walls still standing, and the square tower some ancestor of ambitious mind had set upon one wing, the structure had gained such an imposing appearance, that it was now called the Castle. At the gate, the old lodge-keeper came out to welcome them. Wrinkled, toothless, her scant gray hair blown about by the rough sea-wind, she was an unpleasant picture, and reminded the baronet so forcibly of the persecutions of his own tenants, that he turned to the other window of the carriage. He started as he did so, at the utter contrast of

what he saw. In the dark setting of the window-frame, with the shifting light of the carriage-lamp dancing about her, stood another woman, with a face such as Lewis had never seen before; such a face as a painter might have striven in the old days to give to the Magdalene of his imagination, of which the holiness, almost divine, of expression was pervaded by a patient sadness from some deep past grief, the shadow of which still remained; a strangely beautiful picture in the wavering light. Transfixed with astonishment, Lewis sat staring at the apparition, while an exquisite smile deepened over the fair face, chasing away the sadness.

'George!' she cried, dispelling his half-formed idea that the vision was only a creation of his brain.

George Wynne turned. 'Ivy!' he exclaimed. 'You here?'

She stretched a little white hand through the open window and clasped her brother's. 'I am so glad to see you,' she said.—'And you,' she added to Lewis; 'though George of course forgets to tell me the names of any friends whom he invites!—I shall be home in time for dinner, George. I came to see old Mrs Brown's little grandchild.' She drew the crimson shawl closer about her head, and disappeared into the darkness, followed by the old woman's muttered blessings.

'She looks well, dame,' said George quickly.

'Ay, sir. "God's angel" the little one calls her. We could not have well spared her.'

They drove on. 'Wynne, who is she?' asked Lewis breathlessly.

'My sister,' he answered. 'I have been anxious about her. She was very ill last summer. Poor Ivy!'

'What a lovely face!' Lewis continued. 'I never saw any one so beautiful.'

'Yes,' George answered abruptly. 'How cold it is!' He drew up both windows, and was silent till they reached the house.

Arrived at the castle, Lewis Hogarth dressed in his low old-fashioned room, with a conflicting medley of sensations. It was years since he had last been there; but his thoughts were not busy with any phantom of the past; they were now filled with the unexpected beauty of his friend's sister, to whom, when he first heard of her existence, he had not given a second thought.

He found his way down-stairs a little before dinner-time, into the long drawing-room, with dark oak rafters and modern furniture, gay with all the traces of woman's handiwork and presence; and before the door leading to the conservatory, half-hidden by the heavy curtains, stood his hostess, Ivy Wynne.

He came in quietly; and she, absorbed by a book in her hand, did not notice his entrance. For a moment he watched her silently. The face, which he had but half seen in the misty twilight, was far more lovely, now that the form of the head was visible, with its wealth of golden waves. Presently she looked up. 'I beg your pardon,' she said; 'I did not hear you come in.' She closed her book, stepped from the shadow of the curtains, and came towards him.

But as the girl advanced, a great horrified surprise came over the baronet. A mist seemed to come before his eyes, and hide the face he had but one moment before deemed so fair. In its

stead came a crooked misshapen figure, limping with ungraceful, halting motion. Was this the woman—this the woman who for two hours had filled his thoughts?

'George has told me your name,' she said gently, taking no heed of the behaviour of her guest. 'I hope he has also told you who I am?'

'Yes, yes,' he stammered; 'it is—I have—I mean it is a great pleasure to me to make your acquaintance.'

She pointed to a chair, and moved away to her own, a kind of lounge beside the fire. Then he realised the truth. This woman with the glorious eyes and perfect face, with that almost divine holiness of expression, was—a cripple!

CHAPTER II.

Christmas morning, bright and clear, with the sun shining on the snow-laden branches of the great laurels, and washing the silver frost-work from the window-panes. The yule-log burning in the little morning-room, with its holly wreaths and vases of hot-house flowers lifting their delicate petals in surprise at the keen blast which stirred them. One window was open, and through the sere Virginian creeper stems which clustered round it, three little children were sprinkling crumbs on the snow-carpet, printed by the robins' tiny feet as they hopped to and fro gathering their Christmas bounty. They were pretty children, golden-haired, gray-eyed, like their dead mother. Lazily watching them, Lewis Hogarth stood at the other window, drumming the panes, looking out now and then vaguely at the white distance, so peaceful and still, save when at intervals was heard the low sough of the sea, which stretched away to the right hand, and the first tones of the church bell which came across the fields.

Sometimes in the course of our lives there comes a season—an oasis in the desert as it were—of rest, when the past grows dim and distant, and future there seems none; when in the present we are so content that all the rest may go, so long as we can drift on aimlessly in the same sweet calm. In one of such pauses Sir Lewis Hogarth had been spending the past ten days. It seemed as if some spell were cast upon him, as though some fascination, till then unknown, fettered his senses. Only on this Christmas morning he had awakened to a knowledge of its cause. Why or how he could not tell, but he knew that he loved Ivy Wynne, with a love strong and tender, such a devotion as the Catholics of old time gave to their patron saints; such a love as he had deemed over for him years ago. He had forgotten all besides, utterly contented in that lonely ancient country-house, made bright by the face of its mistress. Those old gray walls, so marred and weather-worn, the thick rough growth of the climbing leaves that bore her name, the sweet pure face—all these things passed through his mind as he stood there, thinking, thinking; for he knew that ere long he would be called upon to make a choice which, in a measure, must have an influence over his whole life. On that first evening, in the shock of his discovery of the fearful blemish Fate had cast upon the woman he since had learned to love, he sought to avoid her. It seemed so terrible—that lovely face and crooked

feeble form, that angel smile and those ungainly movements; till, when he was next morning for the second time alone with her, the scales fell from his eyes, and he saw her as she was; he realised the beauty of the character her brother had been describing to him; he understood the veneration in which she was held by those around her, and then he found himself talking to her as though their friendship had lasted years. And soon she had heard more of his life and thoughts and hopes than any one else in the world. To her he had unlocked the secrets of the hidden past, and noted the tears gather in her eyes as he told of his dead love. For the past, she pitied him; for the future, she spoke to him as no one else had done, of his duties to the old home, which he affected to depreciate. He had never in the course of his wanderings seen another woman like her; he forgot the bent figure and ungainly walk, as the light changed and softened in those wonderful eyes. And now the glamour had been thrown over him, and he knew he loved her.

During those few days much of the sadness had gone from her face—perhaps for the joyous season. As the bells were still pealing, she appeared dressed for the Christmas morning service. 'Children,' she said, 'are you coming with me to church, or will you stay with the robins?'

'Aunt Ivy!' cried the youngest, a little one of four years old, running up and clinging to her with the love and confidence of all children towards her—'Aunt Ivy! where do the robins go to church?'

A great tenderness came into her eyes, a yearning look of motherliness towards the motherless child, as she led her back to the window. 'Up there, May, in the great holly-tree. Don't you see the berries? The fairies have decked them with white feathers in the night.'

'And they have church there, and God listens to them?'

Ivy smiled. 'No doubt,' she said.

'And Alfred says the robins don't go to heaven. Is it true, auntie?' continued the little one, pleading for her favourites.

'I don't know, dear. It is time to go to church. Run up to nurse.'

'But auntie, my little canary was all stiff, and wouldn't eat, and nurse said it was dead; and Alfred shut it up in a night-light box and put it in a hole. It had broken its leg, and could only hop on one, and I hope it will be well in heaven.'

'So do I, darling,' murmured Ivy, as the children sped away. She went to the window and rested her head against the panes for a moment, watching the birds, which had ended their morning meal, and had flown back to the great holly-tree, glowing red through its burden of snow. Lewis went to her, and as she lifted her face, her eyes were shining with tears. 'Children say strange things—don't they?' she said, smiling.

'Yes,' was all he answered, but he longed to take her in his arms and bless her, and tell her all she was to him. Perhaps something in his voice did so, for she turned away and left him.

In the afternoon, Lewis had strolled out with the other men down to the fishers' cottages upon the cliff; but they were soon involved in a discussion on farming implements, which in his state of

mind was not congenial; so he wandered back alone through the winding village street, where the children's merry voices proclaimed it Christmas-time; all happy; and in his heart was a strange unrest, a doubting of the future. The door of the old gray church was open; some sudden impulse made him enter, and go up the holly-decked aisle and sit down in the old square pew where he had sat that morning at Ivy's side. There was a trembling swell of music upon the silence, solemn chords upon the organ, the deep heart-soothing melody of Mendelssohn's grand angels' song, *Rest in the Lord*. The organ throbbed and quivered, rolling its volume of sound among the wreathed pillars, then ceased suddenly, dying away into silence.

'I did not know I had a listener,' said a soft voice close to him.

'You!' he said, starting up. 'Was it you playing?'

'Yes. Why not?'

'Only because, I never heard anything like it,' he replied. 'How and where did you learn?'

'Here,' Ivy replied. 'I had a few lessons, and taught myself the rest. It is my greatest happiness, I think,' she went on softly; 'for she too had grown to trust him and talk—as she did so rarely—of herself. 'Whenever I am vexed or impatient, I come and play here.'

They were walking slowly homeward now, over the powdery snow. 'Are you ever impatient?' he said. It appeared to him impossible that earthly passions should have place in that nature, which seemed so near to heaven.

'Very often,' she answered smiling; 'more often than I like to say. You, a man, would not understand what absurd little things trouble and fret me.'

'But, to-day?'

'You share the sin of curiosity, I see,' she answered. 'If you wish, I will tell you. I shall be glad, for it is a subject upon which I cannot speak at home. It is the future that troubles me,' she went on quietly. 'I see a change approaching in the distance, coming nearer every day, and I know that my home will soon be my home no longer.'

'But your brother?'

'You forget,' she interrupted. 'Sisters cannot be always first; it would not be right they should; but—he has been all the world to me.'

'Is George going to be married then?' Lewis asked.

'Some time, I suppose.'

'But surely he would never wish you to leave him?'

'O no; but—women are so different, you see. I suppose a dozen men could live together in that old house without a disagreement, yet two women could not. I have been first so long in the house—and it would never do.'

'But where shall you live then?'

'Oh, here,' she answered. 'I could not leave the dear old village.'

'But you will not be happy?'

'Yes,' she answered. 'I shall grow used to it; and with use will come—content.'

The steadfast smile in the gray eyes as she raised them, shining through a gathering mist of tears, haunted Lewis Hogarth for many a year after, when that Christmas Day had passed for-

gotten among the crowd of others which followed it, when by none but him were remembered all its pleasure and its pain.

MORE SINGING MICE.

SINCE publishing our notice of these tiny musical creatures, we have received several communications from obliging correspondents, which bear out our former remarks that the faculty of singing is natural to certain kinds of mice.

In reply to those who consider the singing an evidence of disease, it might be mentioned that in a specimen examined by Frank Buckland, no traces of disease could be discovered. One friend remarks that the ordinary mouse is so strongly attracted towards the sounds from a piano when being tuned, that although perfectly wild before, it will get as near the piano as possible, and will sometimes be found in it. Mice have also been observed to dance round the piano in their own peculiar fashion, as long as the tuning lasted, and as if they enjoyed it immensely. We offer the following additional facts and testimonies, as a further help to the study of this interesting subject.

A correspondent in India writes as follows: 'One day I was roused early in the morning by the exquisite music of some unknown animal. The melody proceeded from a hole in the next wall, and was very agreeable at that time; but I could not discover who the singer was. I could not recollect to have previously seen any creature lodged in the hole whence this harmonious song flowed. The notes bore a close resemblance to the vajantri music, and I made no hesitation in concluding that that was the source from which ancient Indians derived this music; for that sound produced the same flow of sounds on a small scale as the vajantri pipes of the Hindus. What can this creature be, I said to myself, which sings so sweetly in the wall? Can it be a snake? Afterwards I often heard the same music without seeing the singer. But one evening, soon after the lamps were lit, three mice came out from the wall, and one of them sang the same tunes in my presence. The mice were small in size, as I thought on account of their tender age. Subsequently I often heard their music, until the time of my departure from the place. . . . Singing mice I now conceive are quite common throughout India.'

The next account comes from a lady in Limerick: 'Some time since, we were much astonished, one evening at dinner, to hear a singing or rather chirrup through the room. At times it seemed in the air, then on the floor, and even at the same time from each end of the room. We could find no cause. One suggested the house was taken possession of by crickets; another laughed and cried out: "A real ghost." After we had retired from the room, the servant called me, and shewed me a number of tiny mice under the table, singing most cheerily, and eating the crumbs that had fallen. They ate and sang and washed their faces. Seeming so much at home, I kept quiet and watched them. Their appearance was peculiar; the body was shorter, and of a darker colour than the mice we commonly see in houses. The ears

were larger, and the face longer—particularly the nose, which was long and narrow—the eyes large and bright. They sat up and sang such a clear thrilling, joyous song, much like that of the canary, but very much weaker, their little throats throbbing all the time.

We have the following interesting particulars from a lady in Dublin: 'Being a great lover of birds, and indulging my fancy to a rather considerable extent, I pay the usual penalty, that of being subjected to frequent inroads of mice. It is no unusual thing to see five or six running about my bird-room almost tame, picking up the seed scattered from the many cages hung around. Some years since, my mother, a delicate old lady, who lived very much in her own room—which was directly over that in which I kept my birds—complained that she was frequently awakened during the night by the constant warbling of my canaries. This I knew to be impossible, as, being a very light sleeper, I should have heard them myself, as the birds were kept in my dressing-room, which opened on my own bedroom. This was going on for some time, and though I moved some of my singing-birds, still my mother complained. At length, one evening my housemaid called me, saying that one of the birds had got out of his cage, and was singing behind a large chest in the room; that she had lighted a candle to look for it, but could not find it, though she heard it singing, and she feared it had got into a mouse-hole. I went up at once, and most distinctly heard the warbling, and felt quite puzzled, as I knew no bird would sing in the dark and under such circumstances. The note was not that of a canary; but as I had several foreign birds, I thought one of them might have escaped; but on looking at the cages I found all right. I returned to the drawing-room really astonished, saying the notes must have come from the ghost of a dead canary.

'I generally read and work in my bird-room, to enjoy the society of my feathered friends; and in a few days after I had heard the strange song, I was reading, when I was attracted by the same notes, but much louder, and evidently coming from more than one vocalist. On looking, I saw three mice picking up the seed, and at the same time singing as sweetly, though *not quite so loud*, as a good canary. They seemed larger than the common mice, and darker. They were so tame they scarcely minded me, and remained until they had eaten as much as they wished. They became daily visitors, and every one in the house heard them. Strange to say, they first appeared in the upper rooms. As our house was isolated, they could not have come in from a neighbouring house. They disappeared as mysteriously as they came, which I attributed to the presence of a small Spanish greyhound, a great mouser, whose mode of dealing with them was to pounce suddenly on them and to swallow them whole. I cannot say how much I missed the little warblers. I considered them a great acquisition, quite as much as any singing bird. I have never since seen or heard a singing mouse, and was ungrateful enough to have forgotten the pleasure they had given me, until reminded by the article in your *Journal*. I feel quite positive that the song is *not* the result of disease, as I never saw fatter, sleeker, or more merry mice; and there must have been a number of them, as they were heard in

several parts of the house, and remained about a year.'

A business man in Edinburgh detained in the office a little later than usual one evening, had the pleasure of hearing one of these little creatures perform. 'Having occasion,' he writes, 'to remain a little late one evening, my attention was attracted by what seemed like the singing of a canary at a distance. Being somewhat puzzled to account for this, after some search we found the song proceeded from a mouse under one of the desks, apparently in search of food, as a piece of bread placed near it speedily vanished. The mouse gave another short song, took himself away, and has not since been heard of. The song was somewhat of a monotone, but sweet withal; a continuous sort of trill, now and then somewhat piping.'

A correspondent kindly sends us the following curious anecdote: 'Some years ago, in my school-days, myself and four brothers had a tutor. My father fitted up a room for us, which we called our school, wherein we had a piano, upon which it was the rule of our tutor to give myself, brothers, and two sisters lessons in music every day. You may suppose from this that the piano got some fearful thumping daily from five very rough lads alone. During our lessons some of the higher (treble) notes of the piano began to stick—that is, they would not rise after being pressed down. Our tutor said this was caused by dampness, and recommended the instrument to be wheeled round to the fire at nights to cure these sticking notes. But after trying this plan several times, with no result towards its object, our tutor was determined to give the piano a thorough cleaning, and in doing so found, to our great astonishment, under the treble notes two mice-nests, one of which had five young ones. The nests were made chiefly of silk, taken from the ornamental wood-work in front of the piano, in which we had often been surprised to find holes; and my mother on several occasions accused myself and brothers of pushing our fingers through the silk and making these holes. Now the building of these nests must have been going on while we were practising on the instrument, as we had heard several times something, as we fancied, inside the piano making a gnawing noise, little dreaming at the time that it was musical mice who were at the bottom of it all!'

CHRISTMAS IN PRISON.

BY ONE LONG SINCE RELEASED.

THAT bright and joyous season of the year, when even the hearts of criminals are made to feel its exhilarating influence, had come round. Long and anxiously had Christmas Day been looked forward to by many, as a day which would give us some little enjoyment. Enjoyment, do I say? Yes; enjoyment; for such is the extraordinary nature of man, that the very smallest change from ordinary existence will give new zest to life and make it for a time more endurable. Thus with us poor prisoners. Christmas Day had come round again; and even as the lively bells outside sent forth a merry peal, ushering in the festive morn, so did their sound strike up within us all the better thoughts and pleasurable feelings of our hearts. The surly turnkey for once unbanded in his ordinary stern reserve, and opened

his lips to return a civil answer when the prisoner—forgetful at the moment of that janitor's unrelenting severity—passed the compliments of the day.

Everything conspired to make us happier than we had hitherto been. The sun shone forth in unclouded majesty, and though its rays descended not so low as our wall-encompassed yard, yet we could see it shining clearly on the surrounding lofty buildings. The weather too was remarkably mild; more like a morning in May; so that there was nothing to chill the warmth of feeling we each experienced.

This year Christmas came upon a Sunday, which thus caused us the loss of a holiday; for had it fallen upon a week-day, that week-day would have been a holiday. Christmas Day is ordinarily a day of rejoicing. But when it comes on a Sunday, much of the old-fashioned rejoicings and festivities is put aside till the following day by persons who are free to do as they please. In prison, however, not so. The boon of a Christmas Day when it falls on a Sabbath consists only in the extra fare that is then given. It stays not the ordinary dreary, monotonous toil which would begin as usual on the following morn. But this did not trouble us much then. The happy day had come which was to give us some change from the diet we had been living upon so long; and though it was only *one* meal extra, still it was known to be such as many outside would be glad to jump at. In fact this was the anniversary of roast-beef, potatoes, and beer, to be served out to the prisoners in addition to the usual allowance; and most eagerly was the day looked for weeks previously. The same indulgence would be given on New Year's Day; but generally Christmas was considered the most enjoyable.

By this time I had got so accustomed to my hard but clean barrack-bed, that I could ordinarily sleep very well. On the present occasion, however, many thoughts had kept me awake through much of the night—thoughts of those belonging to me; for young as I was, I had got a wife—and thoughts of those too whose agency had brought me there. Had *she*, my poor partner, any Christmas dinner? Had *they*, rich as they were, better fare in prospect? And if they had, could they eat it with the same health and strength that I, their prisoner in jail, now possessed?

As the first dawn of day peeped through our windows, every one got up and dressed in his coarse but clean attire. Then on the door being opened, all took a brisk walk in the yard, with a more cheerful countenance than I had noticed for a long time. Little 'Bobbie'—a bird we had caught weeks before, and let loose again—came flying down from his post on some high turret which had the sun's rays upon it, to look for a few extra crumbs; and as he pecked away at a quantity that was soon thrown to him, it seemed as if he too hopped about more lively than usual, while his chirping notes appeared more musical. Such was the welcome accorded to the little bit of new life which on that day came to enliven our poor hearts.

The officers also, dressed in their best, walked into the place with a more bland and animating expression on their features. Even K—relaxed his usual scowl, and something like a smile could be seen on his face! Every one seemed to feel

that it was indeed a day of joy—though, alas! not so to too many—and frequent blessings were heaped upon the heads of those who thus caused the wretched prisoners to participate, if ever so slightly, in the general hilarity of the season. Within our prison, there happened to be not one under 'severe punishment'; and consequently all, save the sick, could share in the additional comforts and pleasure of the day.

To me, the first salutation, was from Old Sam, echoed by others: 'A merry Christmas to you, Blank!'

'The same to you, old boy! and you too, mess-mates!' was my reply, as like salutations passed around, and conversation, principally about the extra dinner, became general.

'Is it settled, Sam?' asked one of the newcomers, addressing the old man, he being considered the oracle of the ward, and in his capacity of wardman, knowing the most. 'Is it settled that we are to have the extra dinner to-day?'

'Certain sure,' was the reply. 'I heard Mr K—give directions about it not many minutes ago. It'll be sent out to bake, afterwards cut up in front [the front offices], and then brought down here in tins.'

'But is the beer going to be allowed?' queried another.

'Ah!' replied Old Sam. 'You'll find it come in here by gallons, and regularly served out, as is always done at them times. I knowed all about it long ago, though I wouldn't say nothing then, as in case you should be disappointed.'

'And pray, Sam,' said I, 'how came you to know so much beyond every one else?'

'Because,' he replied, 'I ferrets out everything; and if I hears half a word, I'll find out t'other half if I can, when it's for my good in any way to do so.'

Satisfied, however, in our own minds, without placing too much dependence on what *he* might say, we patiently waited the dinner-hour. All was carried on as usual until that time. The service in the chapel was performed in accordance with the ceremonies of the day, and it struck me there was more earnestness in attending to it by the prisoners than usual. Perhaps it was because there was a little of something new to be heard in addition to the ordinary daily routine of official religious worship. And this again shews how beneficial, variety even in such matters, would be. But whether or no, great attention was now paid to what was uttered from the pulpit.

After coming from chapel, the prisoners went to their respective yards, where they had full liberty to exercise themselves as they pleased till the dinner-hour. Now, I must observe here that the dinner-hour originally was noon; but a few weeks previous to this date it had been altered to one o'clock. To-day, however, the customary allowance for dinner was served out at noon, so that the extra Christmas fare should be a supplementary meal at two P.M. What we had for the common food at twelve o'clock was the usual bread and soup, nothing more. This was hardly touched by any one, most of us saving it for some other time. Then began our preparations for the great feast. The table was neatly laid; plates and knives and forks were placed in good order; and the chimes of a neighbouring clock outside were

impatiently listened to as we counted the quarter-hours. With regard to our having plates and knives and forks, I must explain that they were allowed to be sent in by friends from outside; the cutlery, however, being collected in a bag by the wardsmen after every meal, and given to the turnkey at his office in the central lodge. At length the quarter-hour before two sounded, and then we saw come down from the front a huge wicker concern, lined with tin, and called the bread-basket. This was filled with the best, or so considered best, white bread, and a pound of it was served out to each man. By the time this was done the church clock outside struck two, and then several large tin dishes, laden with separate allowances of the baked beef and potatoes, appeared. The sight and smell of them were almost a feast in themselves, for nothing of the kind had we caught glimpse of for many a long day. Boiled food of the same description, it is true we had had; but then it was neither of such good quality, quantity, nor cooking.

The first lot of beef and potatoes passed us by, followed by a large can of beer holding about six gallons. This went through the middle lodge to the correction or felon side; and so did the second and third arrivals, much to the increase of our longing desires. Presently it came to our turn; and each of us soon had a pound of solid good beef, the same quantity of potatoes, and a pint of porter. Need I say with what zest we quickly sat down in our places to enjoy this unwonted feast! Picture it if you can, my readers. I have it all before me now as I rewrite these words from the fading original. Yes; the whole scene is in my eye now, and all I then felt, with all I have since gone through, and the many other Christmases spent in many strange places, amid many wondrous scenes and peoples, civilised and uncivilised, since that hour when, with other prisoners, I greedily fell to on the really good fare before me. Oh, with what relish was it eaten! No gourmet could have plunged into the daintiest dish with more gusto than did we tackle the tempting and ample supply before us. Nor did we—hardened and reprobate as doubtless all prisoners are considered to be by outsiders—forget to quietly ask a blessing, and also thank the generous donor of that feast. To me, it seemed there never could be better food. Indeed, I sincerely hoped that all I knew might have as good.

The health of those who had given us this treat was pledged in a manner which no one need have been ashamed of. It came from the hearts of men made happy for a time in the midst of their misery, by the bounty of others. And if those kind persons could have seen the joyous countenances around that table, it must have diffused intense pleasure within their own benevolent hearts.

It may seem strange to say so, and yet hungry as we had felt, not one in the ward could manage the whole quantity of meat belonging to him. I was satisfied before half had been eaten, and consequently reserved a portion for my supper and the next day. No doubt the beer in a measure lessened our appetite, for I have often since noticed such to be the case, especially when it was porter or stout. However, in our ward it was found that with our ordinary food added, we

had a sufficiency to last us comfortably for three days.

During the time we had been enjoying our dinner, in came the governor and chaplain, the latter with a benevolent expression playing about his face on seeing us so happy, as he said. The governor also made some pleasant remarks, and promised us the indulgence of a larger fire than usual in the evening, and to a later hour. By this time I had got to the head of our table, not exactly by seniority though, as on account of convenience for my duty as yard-washer and attendant, and through the friendly courtesy of my companions. Thus from my seat, and without disturbing myself, I could easily look upon the others as they busily plied their knives and forks. It was a curious and an interesting sight. All appeared as ordinary common individuals, and to my gaze, not one then had any of the look which habitual or professional criminals generally possess. Yet there were two or three noted characters seated at that board, though only, this time, here as misdemeanants. Next to me on my left was poor A—, the talented scholar, teacher, thinker; and now, whatever previous wrong he had done, an earnest-minded, good man. Adjoining him was B— C—, the well-known 'smasher' or utterer of base coin, a short man, with a sunburnt laughing countenance. He had endeavoured to 'palm' a piece of money, but failed; and when taken, swallowed the bad half-crown, at risk of suffocation. Ultimately, under the doctor's hands, the spurious coin was recovered, and brought in evidence against him.

Opposite to me was Old Sam, grown gray in crime—reckless, hardened by a career so truly wonderful and horrible, even to suspicion of murder, that what I learned of him would be a startling history by itself. Yet even he was not *all* bad. He too was in prison as a misdemeanant for coining, and so serious was his offence, that he had got three years.

Among others around the Christmas table was a gentlemanly looking man who had got a sentence of six months' imprisonment first, to be followed by seven years' transportation. His offence was perjury while in the police force, and trying to get a conviction against an innocent person to whom he owed some grudge. He had a rather unpleasant time of it; though to the credit of prisoners be it spoken, that after a first hard fling at such men, they abate their indignation, and as all there are in a measure alike—criminals real or assumed to be—they try to be quiet and agreeable. This policeman had another to join him while I was there; and they both quarrelled fearfully, letting out many a secret as to the doings not only of themselves, but the Force generally and the orders given them. Another character before my eye at that Christmas table was a half-silly, dwarfish young man, more like a boy than one grown up. A foundling, he had never known the tender care of parents nor the guiding voices of the good. Ever in some trouble, which was often forced upon him, I pitied him, and wished I were a rich man, to have taken him by the hands when both of us were free.

One more was a surly morose fellow, who knew several in the ward, and was an out-and-out 'shake-buzzer'; that is, an expert thief from ladies

alone. He mentioned a case which I could not doubt—for in there a sort of freemasonry prohibited lies among each other—in which he was the real culprit, while another man was transported for it. He was in look so like the other man who was coming quietly along at the time, that when he stole a lady's gold watch and her purse, the innocent man was pointed out by the bewildered lady, and despite his assertions to the contrary, was found guilty, and sent away!

Besides these, we had three or four more of a quiet and gentlemanly appearance in manner and tone; one of them very reserved and even haughty in his bearing. No one in the ward knew him, and I never heard who or what he was. I fancied he must have been high in position outside; for even in talking occasionally with me he would speak abrupt and with a curt-ness not very pleasant to bear. If the officers knew his offence, it was studiously kept from us. His sentence of six months was without hard labour. If alive and chancing to read this, he will remember me, not only from one particular conversation we had, but from the special events of the evening following that Christmas dinner.

The afternoon was spent in talking and walking, and at supper (tea-time) our gruel was scarcely touched. How could it be, the horrid stuff, after such a 'feast for the gods' as we had but just enjoyed! Then came lock-up; and as soon as the wardroom door was closed upon us and darkness had set in, a huge fire was made in the chimney grate, the wooden forms placed around, and the whole of us seated in circle before the cheering blaze. All that was now wanted, apart from freedom, according to Old Sam, was tobacco, which delicious weed the sly fellow pretended he had not got, though I had seen a quid secretly stowed away in his mouth. The next thing was for one or more of us to spin a 'yarn;' and here I might moralise and advise to some possible good, were I not limited to space. Enough then to say that, though nearly every one there could tell many an 'owre true tale' of strange interest, and though it is well known that the professional criminal delights to boast of his deeds, yet on this occasion, and indeed nearly all my stay there, never a time but what all talk was hushed when I proffered, or was entreated to relate a something concocted in my brain from some of the works I had read—*Ivanhoe*, *Rob Roy*, the *Talisman*, and Walter Scott generally, Dickens, then beginning his fame, James, and Fenimore Cooper. Sometimes the *Arabian Nights* or Bulwer's earlier novels were all more or less put under contribution by me. And it was curious as well as interesting to note the different tastes of my companions. Indeed I could not help psychologically studying them under this aspect of their minds, for it gave me an idea of what might have been their careers had each been always able to do as he now penitently wished.

I have often thought of this scene on that, to me, most sadly memorable Christmas evening, and have wondered whether any of my then companions are alive, and what has been their fate. I could have inquired, or sought out perchance in the criminal records, as to one or two who, I feared, were too surely doomed to continue in such a life; but the theme was too painful for me; and after my release, I dreaded

anything approaching the subject, except to lay out in narrative form the many notes I had made while there, and which I may perhaps yet offer to the public. But if any of them are alive and chance to read this, they will remember the scene and the narrator.

Not till midnight, as the church clock in the free street outside told us, was my tale done; and we went to our rest, all more, or less thankful to heaven for what we had received, and grateful to the benevolent donors for our feast.

A FOLDED LEAF.

A FOLDED page, old, stained, and blurred,
I found within your book last night.
I did not read the dim dark word
I saw in the slow-waning light;
So put it back, and left it there,
As if in truth I did not care.

Ah! we have all a folded leaf
That in Time's book of long ago
We leave: a half-relief
Falls on us when we hide it so.
We fold it down, then turn away,
And who may read that page to-day?

Not you, my child; nor you, my wife,
Who sit beside my study-chair;
For all have something in their life
That they, and they alone, may bear—
A trifling lie, a deadly sin,
A something bought they did not win.

My folded leaf! how blue eyes gleam
And blot the dark-brown eyes I see;
And golden curls at evening beam
Above the black locks at my knee.
Ah me! that leaf is folded down,
And aye for me the locks are brown.

And yet I love them who sit by,
My best and dearest—dearest now.
They may not know for what I sigh,
What brings the shadow on my brow.
Ghosts at the best; so let them be,
Nor come between my life and me!

They only rise at twilight hour;
So light the lamp, and close the blind.
Small perfume lingers in the flower
That sleeps that folded page behind.
So let it ever folded lie;
'Twill be unfolded when I die!

J. E. FANTON.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'
- 2d. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.
- 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written.
- 4th. MS. should be written on one side of the leaf only.
- 5th. Poetical offerings should be accompanied by an envelope, stamped and directed.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

GOOD RESOLUTIONS.

At the close of the year we hear many people talking about the rules which they intend to adopt for the better ordering of their lives during the ensuing twelve months. They have determined to relinquish bad habits, and to give up those practices which militate against their moral or material welfare. In short, they purpose effecting a complete reform in their conduct, which is to be put in force at the commencement of the new year—but not a moment before. They cling to the doomed habits with a tenacity that is strangely inconsistent with their professed determination to get rid of them. But we all know what little reliance is to be placed upon the professions of these individuals, who have a crop of good intentions annually, that never or rarely ripens into action.

Year after year they tell us the same story, and lay before us their programme of good intentions for the new year, pointing out with pride and satisfaction the chief items in it, and reiterating with fervour their firm determination to perform everything promised. And how does it all end? Perhaps for a week or a month the good resolutions are observed; and then our eager self-reformer grows tired of improvement, and reverts to the old order of things with a sigh of relief. It is not in the nature of a sincere man to talk much about what good intentions he has formed with regard to himself or others; and experience teaches us that little value is to be placed upon the professions of those who are anxious to let the world know that they are very conscientious and ardently desire improvement. As a rule, we find that these people are both lazy and improvident. They belong to that class of which Mr Micawber was an eminent example; and like that distinguished character, they are constantly in difficulties and troubles. In fact, they live in hope, and suffer in consequence.

To men of industry and action, it must be singularly unpleasant to hear these announcements of contemplated self-reform from individuals who

have not a grain of resolution in their character. It is such a mockery of sincerity and earnestness, that it cannot fail to provoke disgust in those who 'reverence truth above all things.' And yet how common it is to find young men at this time of year parading their list of good resolutions, for the purpose of edifying and favourably impressing their friends! The pipe is to be given up; foreign languages are to be learned; and other equally praiseworthy intentions are expressed. And acted upon in how many instances? Alas! in very few indeed. The pipe soon asserts its sway again, and the foreign languages remain as foreign as ever.

But it is sad when we consider that this disposition to form such resolutions as we have indicated is a sure sign of moral weakness, and of moral weakness too that leads to irremediable disorders. A hopeful young man imagines that he makes up for whatever laxity he may have been guilty of in his past conduct, by resolving upon improvement in the future. And thus he goes on year after year making resolutions only to break them, and unconsciously—but surely and inevitably—destroying that sense of moral rectitude within him, without which a man is the helpless prey of his own wicked passions. He fools himself into the belief that he will amend in time; and that he will be able by a determined effort to retrieve his past follies. But the years creep on; and while he is putting off the day of amendment, the bad habits are growing stronger, and the power of giving effect to good resolutions is losing force and vitality.

'Trust on, and think to-morrow will repay,'

is his motto; but the poet has added a pregnant warning to those that put their trust in such foolish anticipations.

There are few spectacles more contemptible than this professed self-reformer when he has reached an age at which reform is almost hopeless. He is then a miserable vacillating wretch, full of hatred towards those who have been successful in life, and bearing a strong enmity

to prosperity in general. He considers that the world has ill-treated him; that he has been misunderstood; and that if he had enjoyed fair play, he would have made his mark in the world. Probably he deems that he is a neglected genius, and tries to feel a lofty scorn for those successful mediocrities who look with pity and contempt upon his threadbare coat and shabby hat. He has a fine show of reasons to account for his ill success in life, most of which spring from a fact of which he is extremely proud—namely, the difference between him and the rest of the world—which difference is, from his point of view—usually a very lofty and poetical one—altogether in his favour. Thus he may be one, according to his own report, whose passions will not brook control; whose nature is wild and untamable; and whose ideas are altogether opposed to the miserable conventionalities which regulate ordinary people's lives. It is difficult to persuade such a one that he is but a conceited fool with a lazy disposition and a vicious nature. He is beyond reproof. Years of intellectual torpor and moral turpitude have destroyed the capacity for understanding truth or for appreciating good advice. How finely Pope has answered those who thus desire to escape censure by professing to be overmastered by strong passions. He has the following in an essay contributed to the *Spectator*: 'The strength of the passions will never be accepted as an excuse for complying with them; they were designed for subjection; and if a man suffers them to get the upper hand, he then betrays the liberty of his own soul.'

It would be far better that those who cannot keep good resolutions should refrain from making them; for there can be little doubt that in the process of making and then breaking them, the moral fibre of a man's character becomes flaccid and relaxed. Our moral nature is so constituted that any trifling with it is fraught with injurious consequences; and those who think that they may abuse it with impunity find out—when achievement is nigh hopeless—that they have destroyed its vitality, and that they are no longer in possession of that heaven-born sense which is our best guide through life.

It cannot be too frequently urged that success is the reward of labour, and that it is a vicious and mischievous fallacy to suppose we can obtain it by any other means. A modern writer has beautifully expressed this idea; and of the many noble sentiments which Mr Ruskin has given the world, perhaps there is not one so pregnant with deep and penetrating wisdom. In the *Stones of Venice* the following passage occurs: 'Now it is only by labour that thought can be made healthy, and only by thought that labour can be made happy, and the two cannot be separated with impunity.' This grand truth cannot be too earnestly taught and promulgated; every child in the kingdom should know it by heart, and learn to see and understand its beneficent meaning. But it is to be feared that many of those who have given up the best portion of their lives to vainly hoping for improvement without making any actual effort to attain it, are past the period when such truths can have much effect. They are wholly lost to the world of action, and live in an atmosphere of dreams and chimerical anticipations. They are

the chief creators of those airy structures called 'castles in the air,' and are content to enjoy the empty pleasure derived from living in such fanciful edifices. No doubt they are of a mind with Pistol when he sings:

If wishes would prevail with me,
My purpose should not fail with me.

Yes; if wishes would prevail, it would be a very lazy world indeed to live in!

We cannot contemplate without a feeling of sadness the position of those who, having thus postponed the day of reformation, find themselves at last face to face with the bitter reality. They are rudely awakened from the moral lethargy into which they have sunk; they have neglected to make good use of Time; but Time has played sad havoc with them. 'Old Age has clawed them in his clutch,' and writhe and struggle as they may, there is no escape from *his* grasp.

In fine, people should reform, if it be necessary to do so, at once, and without parading their intentions before the eyes of the world. They should go to work silently, and with a firm determination to carry out, no matter how trying or hard it may be at first, those virtuous designs which they deem necessary for their welfare. They should not look for applause from the world; their highest reward will in due time come for the good they have done for themselves or others; meanwhile they will enjoy that which assuredly is a sweet and precious possession—the consciousness that they are worthily fulfilling the object for which they were brought into this world.

A more odious form of conceit than this bragging about self-reform does not exist, and no effort should be spared in order to stamp it out. Let those then who wish to improve, labour to that end in silence and in sincerity; success is sure to crown their efforts. And to those who flaunt their good resolutions in the eyes of the world—resolutions which are merely for show and not for use—we would recommend the following proverb: 'Go to the ant, thou sluggard; consider her ways, and be wise.' In short, let *facta non verba* be the motto of all.

A SHADOWY STORY.

A TALE OF THE IRISH REBELLION OF '98.

IN FOUR CHAPTERS.—CHAPTER III.

MISS DECROY turned as pale as death; as did her sister, who sank into a seat, apparently overcome by the shock; but Madame Decroy said in her firmest, nay sternest tones: 'Search, sir! I ask no immunity for my house. I wait the day when it shall be given to the flames, as have been so many houses in which their owners dared to find shelter. Your chiefs have been patient longer than I expected.'

Kate turned her pale face and scared eyes appealingly to her mother, as if to remind her how unwise it was to irritate a soldier; but the look was unheeded. Merely bowing in answer to Madame Decroy's remarks, Westbury addressed himself to the sisters, and hurriedly explained what he proposed to do. On the information he had received, he was compelled to search the

House; he had no alternative; but he wished to do so with as little inconvenience as possible.

The House was broad and deep; it stood upon a large square of ground; but it was not lofty, nor had it many apartments above. Nor were there any underground kitchens or cellars. Westbury said he would go up with no one but the sergeant to examine the rooms, and that upon their return his men should go into the rooms and offices beyond the hall. No assent was given, but no objection was made to this plan, which was forthwith carried out. The two militia-men again 'stood at ease' at the door, so that the front of the House was efficiently guarded; and as has previously been explained, the sides and rear were also under surveillance.

All was silent and dark above. Not only was there no one to be discovered, but there were no signs of any one having recently been there; no chair was out of place, no bed disordered, as would have been the case had any fugitive been disturbed from his easily broken slumbers. In fact, Dickles spoke for both when he said: 'I don't believe there's no one here, sir.'

Relieved more than he cared to shew, Westbury descended, the men rousing themselves when he appeared, as though they felt that now indeed they should be wanted.

'You will take the men with you, Dickles,' said the officer, 'and go over the rooms at the back.—Shut the door, men.'

The door was closed, and the men came forward. Now, the great staircase spoken of sprang from one side of the hall, and at its foot a passage ran straight to the back of the house; but half-way a strong door shut off the rear premises, and this door, either from habit in the troublous times, or for the more prosaic reason of its keeping out the draught, was always kept shut. Of course it was now opened: and the sergeant, still bearing the light, led the way, closely followed by the soldiers. As the last man passed the door, Westbury advanced to close it. The great lump which swung and flared in the hall, threw its glare upon the staircase and upon the door, as Westbury swung it to. He pushed it close, but as he did so, recoiled with an exclamation of momentary surprise and alarm, for the shadow of a man, huge and distorted, as shadows often are, fell upon the door just in front of him. It was gone in an instant. For another instant the Lieutenant, recovering himself, thought the startling shade was his own; but at once he knew it to be impossible, and glanced swiftly round.

The group was still at the stair-foot; and as Westbury turned his face, with a now stern expression upon it, he could not help seeing a wild look, a look of consternation, on each of the faces which met his own. Again was the hue of Miss Kate's cheeks pale to ghastliness; and as the officer threw a rapid glance around the hall, their eyes followed. He approached the ladies. 'You will remember that I have not yet searched the dining-room,' he said. (This was on the side of the hall opposite to his little sitting-room.) 'I must do this. You can see that I have no choice.'

Madame Decroy bowed without speaking, then moving forward, herself threw wide open the door of the chamber. There was a light burning there, but the room was empty. No living thing

was to be seen or heard within it. After a brief but close search, Westbury came into the hall baffled and not a little disconcerted—the women eagerly watching his every movement.

Presently, upon hearing the returning steps of his men, he glanced up the broad stairs, as if hesitating whether again to ascend them or not. In fact, he was upon the point of doing so, when a short gasping exclamation startled him, and he saw Miss Decroy reel as though about to fall. She had fainted; and Westbury springing towards her, caught her in his arms just as Dickles and his satellites re-entered the hall to report that all was quiet at the back of the house. This incident led to confusion for a time. Westbury carried the insensible girl to the dining-room, an act which enlisted the sympathies of Madame Decroy and Mrs Claridge in his behalf. He would fain have lingered longer with them; but duty compelled him to withdraw for the purpose of dismissing the men, Dickles giving it as his final conviction, that O'Flynn was as bad as Mullany; and that Squire Decroy had not been within a day's march of Boreen for a month past; and that in point of fact he *must* be in France, as every one had always believed him to be.

As the outer door swung after his subordinate, Westbury turned and moved irresolutely towards his sitting-room; then glancing across the hall, and seeing that the door of the dining-room was open, he mustered up sufficient courage to inquire after Miss Decroy. He found her sufficiently recovered to sit up. She smiled faintly when she saw him; but with this smile there was, as there had previously been, an expression which was difficult to understand—a terror, a wildness, which in some strange way was reflected on the faces of her mother and sister. Westbury said a few words expressive of his regret at having thus disturbed them; but Madame Decroy interrupted him: 'Not a word of apology is needed, sir; we are and ought to be thankful that fortune has placed a gentleman of humanity and delicacy in your position. We are your grateful debtors.' There was an old-fashioned formality about this brief speech, which to a great extent agreed with the old lady's style, and the Lieutenant felt that he was on a better footing with the family than he had ever been before.

Secretly satisfied with this advance, he left them, to pass a solitary hour or two in his own room undisturbed, if Fate should so permit, and no more alarms should occur that night. Taking down one of his few books, he sought to compose himself for a quiet but ineffectual spell at reading. The shadows haunted him—worse because they *were* shadows, and nothing more. He could not help thinking that there was something very mysterious about the affair. Twice repeated; there was the strangest part! Perhaps he ought to report it. But then, what had he to report? Was he to say he had seen a ghost? And if not, what was he to say he had seen? The Lieutenant affected to laugh a little laugh aloud as this idea crossed his mind; yet he was perfectly aware even while he did so, that he felt it to be an inexplicable and ominous business, which was in reality anything but a laughing matter.

Read as hard as he would, concentrate his mind as he might, his thoughts would soon wander, and

instead of the pages of his book, he beheld the distorted outlines of the gigantic shadow which had twice thrown itself so strangely before him. 'I believe—I am sure,' he at length exclaimed, 'that it was the same shadow. A plague upon the thing! Now that I recall it, I am almost sure I could recognise the outlines!' So strongly did the idea possess him, that he was at last fain to give up the attempt at reading as hopeless; and not wishing again to intrude on the family, sought to compose his nerves by another saunter in the open air; and so once more he found himself patrolling the road outside. Nor was he alone in this task; the moon was now fitful; at one moment obscured by clouds, leaving the night utterly dark, the next shining brilliantly, for she was near her full, and rendering everything around nearly as visible as by day. By these glimpses of light, he saw here and there the men who watched the road through the village, a watch which of course was maintained all night long; while in the centre of the miserable hamlet, a dull light, which shone dimly through the red parlour-curtain of the poor hostel, shewed where the headquarters of the detachment kept their vigils.

As the moon vanished behind a huge cloud, her last rays shewed him—or he imagined so—a group of three or four persons standing beneath a tree on the road-side. He advanced towards the spot, and now he certainly heard a step in the darkness coming towards him. His hand moved towards the hilt of his sword; but he smiled at his precaution the next moment, as he recognised the broad figure of Biddy Quin.

'Good-evening, Biddy,' said the officer. 'Was there any one with you just now?'

'Wid me, yer honour?' returned Biddy. 'Sure, an' there's not a sowl to be seen betwix this an' the houses on the hill, an' it's meself that's walked all the way in.'

'What! since I saw you at Boreen House?' said Westbury.

'Av coorse. An' why not?' said Biddy. 'Wid a night like this, an' that blessed moon, it's a short half-hour there. I'm glad to see yer honour, for it's ungrateful ye've been thinking me, by reason of me niver tellin' ye how thankful me an' the childer was'—

'Oh, never mind that, Biddy,' interrupted the officer. 'I have been repaid, you know; you must thank the ladies at the House, not me.'

But Biddy's eloquence and gratitude were not thus to be extinguished, and she persisted in enlarging upon the officer's generosity, walking towards the village all the while, until, to get rid of her, Westbury turned abruptly towards the House, and left her in the midst of her florid thanksgivings. Even then he did not fairly escape until he was standing in the hall, for the woman followed him to the door, and as he somewhat rudely shut it in her face, he heard these last words: 'An' it's meself an' the two sick childer will niver forgit'—

Half amused, half annoyed, Westbury repaired to his room, having had a far shorter stroll than he had intended; while Biddy—who might naturally be supposed to feel hurt at having her full flood of gratitude rolled back upon herself—went away with actually a smile upon her face. This smile was not altogether one of forgiveness; there was a triumphant and very knowing look with it; and

strangely enough, Biddy, who had been but five minutes before so anxious to get home to her children, and had walked slowly and heavily, as a woman tired by a long and hurried walk would do, now strode swiftly off, at a pace indeed that many a man might envy; and what was also strange, she retrod the road she came.

The next morning dawned in rain—a steady persistent rain, which continued with little intermission throughout the day and indeed for several days to come. No soul who was not absolutely compelled to be out was seen in the half-liquid street of Boreen; even the pigs, which had seemed to defy every variety of weather previously, now deigned to seek the shelter of cart-sheds, or what was still better and more customary, the interior of the cottages. Yet bad as the weather was, Westbury gladly welcomed the hours when he went his rounds, muddy and rain-beaten though he speedily became; for the *ennui* of sitting alone all day was now becoming intolerable. Sleeping, smoking, and reading he had tried, and exhausted them all, pretty nearly exhausting himself as well. There was a short break in the monotony when the household met at dinner; but even although Westbury fancied there was a little more kindness in the tone in which he was addressed, and although he endeavoured to start some kind of conversation by inquiring after Miss Decroy's health, yet no great extension of the sitting came of the attempt. Indeed, when he shewed some desire to prolong his stay with them, the same half-wild, half-terrified expression, which he remembered so well from the previous evening, came over the young lady's face. Puzzled by this, and quite unable to divine what he was doing to cause such a change, the Lieutenant withdrew, and passed a few more dreary hours in his sanctum.

On that night, happily—so he thought of it—Miss Kate was his visitor. The impulse was beyond his power to resist. 'Ah, Miss Decroy,' he exclaimed, 'you are like a ray of sunshine breaking into the dull cell of a prisoner.' This was the first time he had ever ventured upon anything so florid; and he looked so confused at his own temerity, that the girl gave way to the unwonted enthusiasm of the moment in a silvery laugh.

'Why, I thought it was only we Irish that were romantic and poetic in our language,' returned Miss Kate; 'but that seems quite a delusion. I never had so complimentary a speech directed to me before.'

'I really must beg your pardon,' said Westbury, still more confused. 'I feel I ought not to do so; but—but I could not help it, Miss Decroy, and that must be my excuse. I had been so uneasy and dull here; within and without, all so wretched, that when you appeared it was as if the sun or moon were rising'—

'Nay, nay,' interposed the young lady; 'this is growing more poetical still. In spite of appearances, I shall have to believe that you are as truly an Irishman as—as Biddy Quin herself. The comparison may be allowed to prove that I am native and'—

She stopped here; and Westbury having broken the ice, mustered fresh courage. 'Pray, finish the quotation, Miss Decroy. But you must forgive me if I say one thing more.'

The girl looked an inquiry and her permission.

'The greatest prejudice I have noticed since I have been in the country, Miss Decroy, is the universal prejudice of its people in believing that the English are prejudiced against *them*.'

'That a prejudice!' exclaimed the girl, her large dark eyes opening to the widest in her astonishment.

'Certainly,' returned the Lieutenant quickly; 'and a most mistaken one. There are hosts of Englishmen who admire Ireland, and—and the Irish people, more than they can easily express—more than the tongue'—

'I am sure I shall never cherish the equally mistaken prejudice as to the English being matter of fact or prosaic,' interrupted Miss Decroy, as she moved towards the door. 'I feel that the Milesian reputation for flowery discourse is obtained on false pretences, and must be restored to the Saxons.' With this she was gone; and had a veritable sun-beam quitted the room, it could not have seemed more changed and dull to its occupant.

More rain, more yawning; a visit from the corporal with his report; nothing afresh; more rain—it had never left off raining—more yawning, until at last ten o'clock came. There were no chimes in Boreen, no booming church clock to announce the time; but that it was ten o'clock Westbury knew, by referring to his bulky watch; and heartily glad was he to find it late enough to justify him in going fairly to bed. Rising, therefore, with one tremendous yawn, which seemed to expend the reserved force of fifty that he had recently checked and strangled, he was moving slowly towards the hall, when his ear caught the unusual sound of a horse approaching. Another instant and he could hear the plash of hoofs through the rain-pools; then—as he knew from the first it would be—the rider halted; there was a short pause, during which he heard voices, and then came a heavy knock at the door. As he was standing in the hall, and knew right well of what kind the visitors must be, he did not hesitate to open the front-door; and there sure enough stood Dickles, his gray greatcoat streaming with wet, his forage-cap soaked. Just behind him was a horseman, a soldier also, as his capacious cloak testified. 'Despatches, sir, from C—,' said Dickles briefly. The rider threw up his hand in a military salute, then shaking the wet from his huge cloak as he moved it, handed a packet to the officer.

'Do you go on farther?' asked Westbury, as he broke the seal, noticing that the soldier gathered up his bridle-rein, as a man about to start.

'Yes sir,' replied the trooper; 'we mean to have 'em to-night. I don't mind a good wetting once more, to catch the thieves, for I've had many a soaking for nothing through them.'

'Oh, that's it, is it?' said the officer, and then hurriedly glanced over his letter.—'Turn the whole of the men out at once, Dickles,' he continued; 'lose no time. Call for me here in half an hour.' The trooper, who had lingered for a moment, threw up his hand to his soaked cap again, and then plashed off through the mud and rain.

'I thought as much, sir,' said Dickles, with something like a groan. 'Mullany said the French sloop was to be off the coast to-night or to-morrow, and there's to be a regular rush for

her. But the chain will be complete this time, and we shall have them. I gave the men a hint, sir, and we shall be here within the half-hour.'

'Do you know the route?' asked Westbury.

'Yes sir,' replied the other; 'a little different from our former ones. I expect the detachments from Loughie and Five Hills will take the bog lines, as we are to keep the lower road. Mullany has gone to Loughie.'

'Be sharp, Dickles!,' said the officer, as he closed the door gently, to avoid disturbing the house. As he did so, a slight creaking noise attracted his attention; he paused with the door in his hand, watchful and listening. The sound was not repeated; he had hardly supposed it would be, for he had distinctly recognised it as the soft closing of a window. 'They are on the alert,' muttered Westbury as he returned to his room. 'It's as well our expedition takes place to-night; if it were to-morrow, we might not be first upon the road.' His preparations were soon made; he buckled his cloak with a sigh as he heard the ceaseless patter of the rain; for he had had quite sufficient experience in traversing the by-roads in Ireland, to know what was before him.

PRE-HISTORIC RECORDS.

THE caves, tombs, and gravel-drifts of the earth, which are of all objects the most uninteresting to the casual observer, have in our days become strangely eloquent. At the touch of science they have lent a voice to the dumb past. Raising the veil of antiquity, they have unrolled page after page of ancient history, written neither with pen nor pencil, but stamped on the rude implements of war or the chase, imprinted on the few threads of decaying tissue that inwrap the crumbling skeleton, engraved on the bracelet of bronze or silver that encircled the slender wrist of some pre-historic beauty, or chased on the brooch of gold that clasped the mantle of some renowned but forgotten chieftain.

So exact are the deductions to be drawn from these mute records of the past, that they have been divided by Sir John Lubbock in his *Pre-historic Times* (London, Williams and Norgate) into four well-defined ages—the drift age, the age of polished stone, the age of bronze, and the age of iron; each of these marking an advance in knowledge and civilisation which amounted to a revolution in the then existing manners and customs of the world. The drift age or Paleolithic period is marked by deposits of rude stone implements; to it succeeds the Neolithic, or age of polished stone, in which the same stone implements were in use, but of a superior class, highly polished and well finished.

The wandering savage who lived by the chase and cut up his prey with the rude unpolished flint knives of the Paleolithic age, was coeval with many extinct animals which then ranged over the wide forests that in those early times covered our own country in common with many portions of the continent. In the caves of Derbyshire and elsewhere, many of the rudely chipped knives and arrowheads of these ancient hunters are found, the rudest occupying the lowest strata; shewing that even in that remote age man had the same tendency to improve as now, and that the practice

of even these rude germs of art led to a gradual perfecting of them. Some of the remains of the ancient Nimrods of that remote and, but for these stone records, unwritten age, have been found in caves and sepulchral tumuli; and of all the living races of men they resemble the Eskimo most closely. With them are found the remains of such extinct animals as the cave-bear, the mammoth, and the woolly rhinoceros; and they appear to have been driven along with these animals towards the north, through the action of some geographical change whose magnitude we have now no means of gauging.

The Neolithic era marked the dawn of a new and higher civilisation. In many parts of the country, notably at Hardham in Sussex and in Kent, many collections of polished stone implements have been found, such as stone axes and adzes, chisels, gouges, small saws, hammers, awls for boring, stone picks for turning up the soil, pestles, mortars, querns, and spindle-whorls. Needles have also been found, which imply a knowledge of the art of sewing; and cups and various other vessels of rude earthenware, which shew that these old-world folks could ply the potter's craft with a considerable degree of dexterity. The bones found shew also that they no longer depended for a precarious subsistence altogether upon the spoils of the chase, but that they were herdsmen and fishermen as well. They possessed the horse, a small short-horned ox, two kinds of swine, goats, and horned sheep, with dogs of a large breed. In architecture they were unquestionably far behind, for their dwellings seem to have consisted of pits roofed with wattle. The remains of these ancient Neolithic builders are plentifully scattered over the country. They were all built or rather scooped out upon one plan. There was a circular shaft for an entrance, going down to a depth of from seven to eight feet, five to seven feet wide at the bottom, and narrowing to three at the top; and round this was a chamber or cluster of chambers. In these huts are found a variety of the polished stone implements mentioned above, bones of the domesticated animals, and shreds of pottery. In north Kent there are a series of vertical shafts sunk in the chalk; but these seem to have been rather flint quarries than the homes of our Neolithic forefathers.

In the north of Scotland, modified perhaps to suit the greater inclemency of the climate, the Neolithic dwellings are somewhat different, and take the form of massive circular huts or burghs, as they are called. In these are found the same stone implements and the same bones of animals. The flint of which these stone implements are made was obtained by quarrying for the flint nodules in the chalk. Many of these mines with the mining tools still remain, with great quantities of chips and splinters; which shew that the flint implements were partially at least manufactured on the spot where the flint was obtained.

In some instances, caves seem to have been used as dwellings by the Neolithic inhabitants of Europe; and where not employed as a shelter for the living, they seem to have been frequently selected, when within reach, as a resting-place for the dead. In these cave-mausoleums, numerous skeletons of both sexes and of all ages are found. Where no cave was to be had, the

dead, as our readers are already aware, were buried in barrows or cairns; numerous broken implements were laid beside them; and from the quantities of calcined bones found in some of these graves, it is believed that in the case of a chief, human sacrifices may have been offered. From the number of these tombs and the plentiful remains of Neolithic dwellings scattered over Britain, we are led to the conclusion that our country, in common with Europe, had in those days a somewhat large and tolerably civilised population, who had flocks and herds, who practised agriculture, and who were hunters and fishermen.

In the pile or lake dwellings of Switzerland, which are assigned to this era, many interesting discoveries have been made. Three kinds of wheat—one an Egyptian variety—have been found; also two kinds of barley, two kinds of millet, the remains of fruit such as apples and pears, peas, flax, and weeds. For their cattle and swine the lake-dwellers seem to have laid up winter fodder in the shape of acorns and beech-nuts. They made cloth of their flax, and could even weave it into an ornamental pattern. From an examination of the human remains found in these curious lake-dwellings and in the sepulchral caves, the most eminent geologists are of opinion that our Neolithic ancestors were of the same race as the Basque-speaking peoples who are still to be found in the north of Spain and in the south of France.

However acquired, the possession of Bronze marks an era of advancement. The dwellings of the people who used it were better, and their circumstances more comfortable, than those of the Neolithic tribes they succeeded. They had axes and sickles of bronze, gouges, chisels, hammers, and knives; and as a natural consequence, all the products of their labour were superior and better finished. They could weave well, a tough and strong fabric, and their clothes were formed of several pieces sewed together. Their cloth is almost invariably of linen; no woollen cloth belonging to this period having been found either in France or Switzerland; but in a wooden coffin discovered in 1861 at Ribe in Jutland, the remains of a body were found inclosed in a cloak of coarse woollen cloth; a woollen cap covered the head, the lower limbs having been wrapped in woollen leggings. Under the cloak was a woollen shirt, girt round the waist by a long woollen band. A bronze dagger in a wooden sheath had been laid beside the dead hand; and in a small box were a few necessary articles for the long journey towards the spirit-land, consisting of another woollen cap, a comb, and a knife—the whole inclosed in a bull's hide. Another coffin contained the paraphernalia of an ancient belle, a brooch, a knife, a double-pointed awl, and a pair of tweezers—all of bronze, two studs, one of bronze and one of tin, and a javelin head of flint; while a third coffin, that of a baby, contained a small bronze bracelet and a bead of amber. Sir John Lubbock considers that these bodies belonged to the close of the bronze period. Bodies wrapped in woollen cloth have also been found in Britain, as at Scale House barrow near Rylston in Yorkshire. It is, however, worthy of remark that it is only in the exceptional cases in which the body is turned into adipocere (an unctuous waxy substance), that woollen cloth is found; in normal circumstances

that fabric would disappear far more rapidly than linen.

The bronze remains found in the Rhone Valley prove that the art of metal-working once acquired, was carried by these early races to great perfection. They were acquainted with the processes of casting, tempering, stamping, and engraving metal. With this discovery of a new art came a simultaneous improvement in the potter's craft; the rude cups of the Neolithic age disappear, and are succeeded by vessels of an endless variety of form and ornamentation, some of which are extremely beautiful. Some of the vases are inlaid with tin, others are marked with the same patterns employed to decorate the Etruscan vases of Italy; while others found in the pile-dwellings of the lake of Bourget, have representations of men and animals. The collections of bronze jewellery are also abundant and curious. They consist of bracelets, armlets, long hairpins with decorated heads, rings, earrings, girdles adorned with pendants, brooches, buttons, studs, and torques for the neck. War being in these early days as common as it appears to be in more modern times, we find well-stored armouries, comprising battle-axes, arrows, and clubs, lances and short swords, as also helmets and shields of thin plates of hammered bronze. Their graves resemble those of their Neolithic predecessors, with one important difference—dead bodies were burned as a rule instead of buried, the ashes, inclosed in urns, being placed in the tombs.

In the lake-dwellings of Eastern Switzerland the implements found are of bone and stone; but in those of Western Switzerland there are rich accumulations of bronze implements and utensils; while in the upper layers of debris, iron begins to appear; shewing how in its turn the bronze was supplanted by a metal still more universally useful, and destined to be the type of a grand era of enlightenment and progress. Almost as interesting and instructive as the lake-dwellings of Switzerland are the Danish kitchen-middens or shell-mounds, refuse-heaps which have accumulated round the tents or huts of the primitive population. Many of these have been examined; and rude flasks, sling-stones, axes, flint fragments, and the bones of various animals, have been obtained from them.

In primeval times, many animals were abundant in our own country and all over Europe, which seem gradually to have disappeared. Some of these enumerated by Sir John Lubbock are the cave-bear, the cave-hyena, the cave-lion, the mammoth, the woolly-haired rhinoceros, the hippopotamus, the musk-ox, the Irish elk, the wild-horse, the glutton, the reindeer, the auroch, and the urus or wild-ox. Simultaneously with these or with some of these were human beings, who harboured in caves, and whose skeletons are found in caverns mixed up with the bones of these animals, and with stone or bronze implements. About these cave-men there is necessarily much less information than there is about those of the Neolithic period; comparatively few skulls have been found which were in a state that admitted of restoration; and among these few, there are great differences.

With regard to the antiquity of man, Sir John Lubbock, after carefully examining the views of many eminent geologists, comes to the conclusion

that man certainly existed in Western Europe during the period of the mammoth and the *Rhinoceros tichorhinus*, and that the presumption is that he also existed in pliocene and even in miocene times; but the proofs of that—the remains of the earliest representatives of our race—are to be sought, he thinks, in warm, almost in tropical climates.

From the manners and customs of modern savages, much light may be thrown upon the early condition of pre-historic man. After considering the condition and progress of the Hot-tentots, Veddahs, Australians, South Sea Islanders, Eskimo, and others, Sir John Lubbock remarks that, in reading any account of the savage races at present existing in the world, 'it is impossible not to admire the skill with which they use their weapons and implements, their ingenuity in hunting and fishing, and their close and accurate powers of observation.' By all these qualities we may suppose pre-historic man to have been distinguished in at least an equal degree. The habits and customs of existing savages, however, while presenting many points in common with each other, present also many points of divergence, arising from independent development; and such was no doubt also the case in the most ancient times; the degrees of civilisation even in the stone age would differ much.

It is evident that man when he first spread over the surface of the earth must have been in a condition represented by the lowest type of savage. Then by slow degrees, by imitation, and by the teaching of experience, the capacity of lodging and clothing himself, and of improving his simple implements, would develop and expand, until man, physically one of the weakest and most unprotected of all animals, would, to quote from our author, 'by dint of that subtle force which we term mind,' make himself independent of nature, careless of the inclemency of the seasons, skilful to force from the stubborn soil the food which suited him, or the ores from which to forge the weapons which gave him power; till at last, 'monarch of all he surveyed,' he could cope in his native coverts with the shaggy lion, and be more than a match for the fierce wild-bull, and overtake in the chase the fleet stag or bounding antelope.

The wild-man, like the wild-beast, is always timid, always suspicious, always on the watch; and the condition of the savage woman is still more cruel. 'She shares,' says Sir John Lubbock, 'all the sufferings of her mate, and has also to bear his ill-humour and ill-usage. Even the possession of beauty, far from being an alleviation, is only an aggravation of the evils of her lot, by securing for her a hard thralldom to many masters.'

With growing civilisation, on the other hand, come security and confidence, and that sense of justice and honour which is the best protection of the weak; and with the increasing and ameliorating influences of science, a great improvement may still be looked for in the condition of our race. We stand perchance upon the threshold of a future, brighter than even the brightest dreams of our past; on the verge of a Utopia long deemed impossible, when the moral nature, unvitiated by an erring will, shall no longer fetter the eager soul to base aims and unworthy aspira-

tions, but shall leave it to its free scope and native regality of birthright and action. Then to the human race, still in its vast masses so ineffably degraded, a new and more mighty civilisation may unlock boundless stores of knowledge and power, and unseal fresh fountains of pure and unfailing enjoyment.

CHRYSA LIS.

IN FOUR CHAPTERS.—CHAPTER III.

It was evening; the candles on the Christmas-tree had dwindled down to little lumps of wax; a scent of frizzled fir-twigs filled the room, a litter of sweets and coloured paper covered the floor; and the children, their arms filled with new possessions, clustered round Ivy as she sat in her low chair, telling them the good-night story—and to-night it was the old story of Christmas that the sweet tones of her voice repeated, with many a quaint child-like conceit and comment of her own, told with unconscious heedlessness of any stranger's presence, though Sir Lewis had drawn near to listen to the familiar words.

When at last the children were dismissed, Ivy leaned back silently, her eyes gazing into the glowing fire-pictures; and he sat silent too, watching her. That sadness had come back to the fair face; not from the remembrance of that burden laid upon her for nigh twenty years, and borne so patiently, that it might not darken the lives of those around; nor from the approaching future of which she had spoken; nor from the thought of those who had once made the Christmas bright in the old home, whose voices and laughter had made the dark oak rafters ring, those who had forgotten Christmas joys and Christmas sorrows in the land beyond the 'wreck of time.' She was thinking of that strange influence the last few days had cast upon her life. Those who only knew her outward existence, her peaceful round of duties, her self-devotion for the happiness of others, perhaps thought—as it is so often thought of those who hush their sorrow to silence, and teach themselves contentment—that she had no hidden life. Yet the yearning for love which dwells in every woman's heart, had its place in hers—the longing for that joy from which she had deemed herself for ever shut out—and now—Was it then to be wondered at that she, for the first time sensible of homage to herself, should have given her whole heart unconsciously to the only one who had looked with love, not pity, upon the beauty of her face? How would it be when he was gone, and she alone again, with the memory of this bright glimpse of blessedness all remaining?

At last she roused herself. 'Are you not going to keep George company to-night, Sir Lewis?'

He started. 'Half-past eleven! I had no idea it was so late.'

'Nor I.' She rose and unfolded one of the shutters and opened the vapour-bedewed window.

The night was cold, but clear, myriads of stars shining down upon the snow-whiteness.

'Good-night,' she said.

'Are you going to stay here?'

'Yea. I always wait for the bells.'

'The bells?'

'The chimes,' she answered. 'On this night they are always rung—as a farewell to Christmas, I suppose.'

'May I not stay too?'

'If you wish.'

He wrapped a shawl about her, and together they stood upon the balcony. There in the pale clear light, with that lovely fate near him, the prudence and calmness to which Lewis had schooled himself fled away, and burning words trembled on his lips. But when she looked at him, it was so calmly, so smilingly, almost as though she might have guessed his thoughts, and silenced them by the unspoken reproach. He turned from her abruptly.

'Take care!' she cried, stooping and lifting a little dark object from the ground at his feet.

'What is it?' he asked.

'A chrysalis,' she said. 'Does it not seem strange to think there is life in that—that it is only sleeping, and will wake!'

'It is very ugly now,' he said.

'Ah, yes,' she answered; 'but it will be beautiful some day. Perhaps, a lovely butterfly!' She touched the hard pupa-case caressingly. 'It is worth being ugly for a while, sometimes.' Then turning away, she laid the sleep-enwrapped insect carefully in a hollow of the balustrade, and stood by it silently, perhaps comparing its lot with her own. The action was eagerly noted by her companion, who with a sudden impulse clasped her in his arms.

'Ivy—darling!' he whispered. And she, startled, looked up once with glad surprise; then a great crimson wave flushed her face, as she tried to free herself from his embrace. 'No, no!' he said hurriedly. 'Ivy, listen!'

And then, while she stood passive in the dawn of that unlooked-for happiness, he told her of his love. Wrought up by the excitement of the moment, carried away by her beauty and the influence her presence wrought on him, he spoke. He told her that his happiness now depended upon her, that she must be henceforth the guardian angel in his home and life—and then awaited the response.

There was no answer; only her little hand closed more tightly upon his—then—through the night came the first clash of the Christmas bells. Something as she heard them seemed to shake her from head to foot, then very gently she freed herself from his hold.

'Sir Lewis.' The words were spoken so calmly, there seemed no likeness between her and the trembling girl but an instant before clasped in his arms, and with her low tones still came the song of the bells. 'Sir Lewis, I cannot but thank you for your words, to which I ought not to have listened—only love is so new, so'—She paused for a moment. 'I was surprised,' she continued; 'and you—you have not thought sufficiently over what you have said; you have spoken on the impulse of the moment. But I thank you; for whatever the future may have in store for me, I shall feel that I am not so utterly shut out from the happiness of God's creatures. But you have not counted the cost.'

'Cost!' he broke in. 'What cost?'

'You have told me,' she went on gently, 'of your beautiful home, of your position there, of

your social duties. You bear a title; you have a high place to fill. And I'—the tones faltered for a moment—'I am not fit for this. I ought not to bring a cloud on any man's life; and I will not on yours.—Hush! You think *now* you love me; but soon you would grow tired of hearing ridicule, or at least surprise, at your choice.'

'Hush, hush!' he cried. 'Why do you speak so! What do you mean?'

'Listen!' and she held out her hand. 'I believe you. Your words are sincere *now*; but will they remain so? Prove yourself. Go away to-morrow free, as you came; you will find in a very short time that you are wrong; if not, come back again next Christmas Day. Only go now, and do your best to forget me. If you value your happiness, you will.'

'Never!' he answered passionately. 'Ivy! Ivy! won't you hear me? Won't you give me one promise, one word of hope?'

She looked up for an instant, a whole world of love in her eyes. Then she stole in quietly through the open window, and left him alone with the stars.

The echoes of the bells died in the distance; yet he stayed, hoping she would return, confident in his own firmness of purpose and in the strength of his love. His waiting was in vain.

CHAPTER THE LAST.

The days glided by, and weeks, and months, bringing no change to the peaceful little village, which counted its seasons by herrings and mackerel, its Sundays by holiday clothes—no other outward change. Only up at the 'Castle,' the life which had flowed on there so steadily was taking another course.

Christmas Day again—a wild blustering Christmas, with a strong wind, driving heavy clouds, which were now coming to earth in drenching showers of rain and sleet. The church was just the same, decked with the shining holly leaves. It was afternoon, and from the organ the deep notes sounded sad and slow. There was no one to listen, no one to go home with Ivy as she struggled back against the relentless blast, along the path she had trodden last winter with Lewis Hogarth by her side. Now, as she had predicted, she was alone—not for the moment, but for all her future life.

The day which was to separate her from her brother was drawing near, and Sir Lewis Hogarth was married! In so short a space he had proved—not himself, but the truth of her words. He had gone away in the full confidence that he would come back to claim her at the end of the time she had appointed; and for weeks, in fancy, that lovely face which had so fascinated him had dwelt with him night and day, till he one morning met some other friend of George Wynne's, who not knowing, spoke of her in terms which opened the baronet's eyes to the manner in which such an unfortunate marriage would be received by the world. Then he grew tired of his London life, and went down to his home.

In all the awakening beauty of the first days of spring, he realised the worth of his possessions; and ever and again, as he paced the stately rooms, he saw those graceless halting movements, that bent and crippled form; and as he regarded the

pictures of the stately women of his race, he contrasted with them the poor cripple he had asked to be his wife. He grew restless and unhappy. He saw now that what he had called love had been but a brief 'stound,' which had come with that awakening to pure desires and high endeavours which had been her work. He had committed himself foolishly, gone too far for a man of honour to retract; yet—'Do your best to forget me. If you value your happiness, you will.' And with scarce a struggle he succeeded in obeying her. Six months after, he married a beautiful girl of good family, living near. A suitable match, the world said.

And the woman he had loved had waited in trembling suspense, hoping vainly for a return of the happiness she, by her own act, had renounced; for with all her soul she loved him, with that great store of love hidden away all the years of her woman's life—loved him, so that the struggle to bid him leave her had been almost too hard—the battle almost too fierce for her to win the victory. And this was the reward of her self-sacrifice. Yet even when she heard he was lost to her forever, she bowed her head in thankfulness because, in all her gloomy afflicted life, she had known one happy hour! O God, who from the height of heaven lookest down upon Thy sinning, suffering creation, with how many years of misery must we pay for the one hour of joy! How many lives are there like this, unknown, unnoticed, crushed in the world's turmoil—ruined, dark existences!

Yet to Ivy, existence was not ruined, only dark. She never blamed him. He was right; he had only obeyed her. She went on her way amongst her poor and her home-duties just the same, never pausing to wail over her sorrows or to murmur at her lot; and no one but he who spoke them ever knew the words whispered in the light of the Christmas stars to the music of the Christmas bells.

Lewis Hogarth was not altogether happy, though he had a kind of liking for his young wife; but that Christmas Day, as his yacht, delayed by contrary winds, sighted the murky English shores, he could not conquer a strange regret for the year that was gone, for the deep clear eyes which had looked up to him so tenderly, for the hopeless love he had taught to one weary enough already with the trial of her life!

The day closed in. Ivy sat by the fire dreaming idly; the night fell; the children's Christmas-tree blossomed and faded, and she was left alone to wait for the bells. A servant came in with a message—a child at one of the fishermen's cottages was ill; the doctor was away. What should they do? She went to the window, opened it, and looked out. The rain was over, though the wind still blew roughly, extinguishing the lights, and tossing her hair in its wild, unholy glee. She longed for some movement, some change from her own dreary thoughts. 'I will go with you,' she said to the boy who had brought the message.

It was scarcely five minutes' walk from the gate; and her errand over, the child sleeping quietly, she set off home, followed by the mother's blessings, and escorted by the boy, who insisted on accompanying her. Suddenly, as they passed along the beach, it seemed to her as though some other voice

than the wind's sounded over the heaving waters, above the roar of the surf. She stopped. 'Did you hear a shout?' she asked the boy, who stood and listened. Three times that vague sound was repeated; then Ivy hurried forward round a point of cliff which, jutting out, obstructed her farther view. Again it came, that voice, whatever it might be. On she hastened, as fast as her feeble strength would allow, past the point, though there was scarcely footway between the chalk wall and the dashing surf. 'Do you not see,' she said breathlessly, 'out there by the Lion Rock?'

The boy strained his eyes in the uncertain light; and dimly, within almost a stone's throw of the shore, could be seen, through the clouds of foam flying over her, some vessel in distress.

'Give me the lantern,' said Ivy hurriedly; 'and run back; tell some of the men to come here, and some to get the boat—only go quickly.'

There was no need to urge speed; the boy, sailor-born, knew all the danger; and Ivy, alone upon that terrible beach, lifted the little light on high, to shew to those in peril that some one at least was watching them, that sooner or later help must come. The coast was an easy one; it was deep water everywhere till close in-shore, with the one exception of that reef of rocks called the Lion, almost hidden by the high tide, upon which the small vessel, owing to the violence of the wind and perhaps the insufficiency of her crew, had been driven.

On the deck of the little craft all was helpless confusion. The men, irritated by not reaching their homes by Christmas-time, as promised, had grown sulky and rebellious, and in the darkness of the night and the strength of the wind, had through their carelessness brought themselves into this peril. Two of them had been washed overboard into the seething waves; the other three remaining held on grimly to the ropes, occasionally giving those cries for help which had startled Ivy on her homeward way. And beside the ruined mast, with one arm clasped about a drooping figure clinging to him, stood Lewis Hogarth. Only that morning he had found fault with Fate; and now his past life seemed fraught with every charm as Death was menacing near. There, in those awful moments, his one thought was of life—life for himself and the girl beside him, the wife intrusted to his keeping, who in that short space of time he had learned to love with an intensity that had seemed impossible but a few hours before.

Suddenly another shout from the seamen: 'A light!' There, upon the shore, so near to them, shining like a star—a light! They were seen. Surely help would come.

'Courage, dear!' he whispered; 'it will soon be over now.'

Over it must be; but for life—or death?

A loud cheer from the beach, and over the dark waves sped a boat to the rescue—those on board the yacht eagerly watching as it bore up on its beneficent mission. With infinite difficulty and danger the rescuers drew near the rocks, and flung a rope to those waiting in such agonised suspense; and then steadily, one by one they were hauled on board.

On the beach the fishermen's wives had gathered, and some blazing wood they had lighted cast

a lurid glare over the ridgy surf; and farther flickered that little light which had first brought them the message of deliverance. This Lewis descried as he cowered in the stern, his wife resting half-unconscious in his arms, her hands clasped in prayer.

The landing was the greatest danger, for the force of the surf was such that the boat might be dashed to pieces, swamped, or overturned before they could reach the beach. The tide had turned, and was on the ebb. At last, after breathless watching, now on the crest of a great heaving wave, now in the darkness of an abyss, from which it seemed they would never rise, they came near, and while a cloud of foam blinded the stalwart rowers and made the watch-fire seem dim and distant, the keel grated on the pebbles.

The foremost men sprang into safety; those on shore rushed down to drag the boat above the fury of the waves, which tried remorselessly to suck her back.

'Go you, sir!' an old sailor shouted to Lewis. 'Leave the lady to me.—You could not stand with her,' he added as Lewis paused. 'There's no time to be lost. Go!'

Lewis sprang towards the shore, losing his footing in the treacherous surf, and was finally helped to land by the friendly hands of the fishermen, who, followed by the women, had crowded down to the water's edge. Then, as he stood trying to collect himself, to find words to thank them, a sudden mighty wave dashed over the foremost of them, bearing all down before it, lifting the boat like a shell, carrying with it the old sailor, and dragging the lady from his arms—then tore back with a hollow, rasping sound, leaving the two powerless human beings fighting in the foam for life.

The spectators stood paralysed. All was confusion. Then, a wild cry for strength went up to heaven, as the little light which had burnt so clearly vanished into darkness, and Ivy rushed down to aid. She heard an answering shout from the fishermen as they followed; but hours of horrible agony seemed to pass as she struggled amidst the waters, her hands clinging with desperate force about the drowning lady, her eyes blinded by the spray, her feet seeking vainly some firm hold, till she was dashed upon the cruel stones, and all was blank! The next wave, greedy to seize its victims, rolled up triumphantly, broke with a crash upon the shore, and rolled back disappointed. The fishermen had balked its fury.

Gently they unclasped the poor bruised hands, which had never loosed their hold; and Lewis clasped his wife once more, half-fainting, but living in his arms.

As soon as possible he left her for a moment, to inquire for her preserver, about whom the others had crowded.

There were broken exclamations, sobbing from the women, and murmurs from the men, as he made his way through them. On the rough beach, the light falling on her tangled golden hair, lay Ivy, white and still. Lewis sprang forward, pushing aside the women, and raised her in his arms.

'How comes *she* here?' he cried. 'How has she come by this?'

'It was she who gave the alarm—who sent for the boat!' answered a dozen voices. 'She rushed into the surf! It was she who saved your lady!'

She's badly hurt, poor Miss Ivy,' they cried angrily, as they pressed around their darling.

'God bless her, and spare her!' one old man murmured.

'She was an angel already!' a woman's voice answered; and Lewis, unheeding, knelt there in silent misery. Ivy dead!—for him—for him who had acted by her so cruelly, who had won her love, and thrown it aside as some worthless thing!

Suddenly, borne upon the wind, came the sound of the midnight bells, and with them life returned for an instant, as though the spirit were loath to leave so pure a shrine. Once more those sweet eyes were fixed upon him. 'Lewis!' she whispered, so low that only he could hear—'the bells! It is Christmas Day departing—'

For the second time, while those chimes pealed gaily, he held her in his arms; only now she rested there passively with a smile upon her lips. She did not bid him go. Ended now for ever were sorrow, and life, and love!

A NOBLE SAILOR.

A PERUSAL of the *Journal of Commodore Goodenough during his last Command as Officer on the Australian Station* (London: H. S. King & Co.), has given us much pleasure. Written in a plain and simple style, the book is nevertheless deeply interesting, abounding in graphic descriptions of foreign lands, and replete with sound and useful information. Regarded merely in the light of a pleasant book of travels, it cannot fail to be a favourite; but as a memoir of one of England's noblest sons, it acquires a double interest.

James Graham Goodenough was born December 3, 1830, at Stoke Hall, near Guildford, Surrey, and was son of Dr Goodenough, the Dean of Wells. From childhood he gave evidences of great mental ability, his implicit obedience and high sense of honour making him a general favourite with his instructors. The bent of his inclinations seems to have been directed from the very first to the sea, and at the early age of fourteen he entered the royal navy, through the influence of his god-father Sir James Graham, First Lord of the Admiralty. In July 1851 he passed his examination, and obtained a lieutenant's commission on board the *Collingwood*. During his subsequent career, his unhesitating submission to his superiors, his dauntless bravery, and gentle yet firm powers of discipline, won him the admiration and esteem of all; and so high was the consideration in which he was held, that promotion rapidly followed, and the year 1858 found him in command of the *Calcutta*, gazetted for active service in China. His letters and those of his fellow-officers give an interesting account of the taking of Canton and the Taku forts, where his gallant bearing won him the golden opinions of all. One of his companions speaks of his conduct in these terms: 'I am sure that those who served under him, whilst feeling pride at having been associated with such an officer, can have no better ambition than that they may in some degree resemble him.'

The following account of a banquet given at Nagasaki, in the governor's house, is interesting from the insight it gives one into Japanese manners and customs. 'Yesterday I went with the Admiral to call on the governor, and dined there. We

were placed on chairs on one side of a room, the governor and his suite seated on sofas opposite to us. . . . Servants brought cups of tea, then trays of sweetmeats, at which we nibbled. After cups of water to remove the taste, came very handsome Japanese trays with a broth of fowl and vermicelli, broiled pieces of fresh pork, bits of fish on separate japanned platters, and a shallow red cup of salt—very nasty. After pecking at these, came another tray with hard-boiled eggs, a cup full of capital lobster salad, and lobster floating about with tough mushrooms. Everything is delightfully clean after Chinese dirt. Just now all the party who were yesterday at the governor's were presented with their plates of sweetmeats from yesterday's dinner, nicely tied up with tinsel thread.'

On the return of the *Calcutta* to England, Captain Goodenough filled successively several trustworthy and honourable posts; and in May 1864 he was sent to North America to survey the country (then in a very disturbed state), and to obtain what information he could regarding the ships and guns then in use. Several short voyages to Malta, Genoa, Barcelona, &c. then followed in quick succession, until the year 1870, when the Franco-Prussian war broke out, and Goodenough, ever first and foremost in works of mercy, offered his services in distributing the supplies of food that had been provided by the English nation. Of the assistance which he rendered, the superintendent of the work, Mr Bullock Hall, gives the following account: 'In the dreariest period of the gloomiest of Novembers, when autumnal rains were giving place to snow, sleet, and frozen winter fogs, and we, whose business it was to convey food and clothing over the slippery and almost impassable roads to the destitute in the villages about Sedan, were almost in despair at the task we had undertaken, and were sorely in sore need of encouragement, there came, in answer to our appeal, a man, the very sight of whom communicated new life to us. Here was a man, the very model of an Englishman, with unbounded energy, and combining extreme gentleness with an iron sense of duty, and with a genius for communicating the love of order and regularity which characterised him—here was this man come to place himself meekly under orders, and to go plodding day after day through snow and slush.'

Of the life during the war, Commander Goodenough's letters give an interesting and graphic account of many scenes and episodes, such as the following: 'In the village of St Menges we met a French lady, who had come in search of the body of her husband, who had fallen in one of the charges at the head of his regiment. She knew what kind of wound he had received, and in the village it was remembered that an officer of high rank wounded in that manner had been buried on the heights above Floing. Accompanied by the *maire*, she had the grave, containing forty bodies, opened. The body was found, and easily recognised by the peculiar wound and the white moustache. The poor *marquise* wanted to embrace the body, but was held back by the kind-hearted *maire*, and it was immediately buried in the churchyard in a place which she chose.'

Though there is much that we could dwell upon in connection with the earlier years of

Captain Goodenough's life, we will rather devote ourselves to the period to which the *Journal* mainly refers, namely the subsequent voyage to Australia dating from 1873—1875, when our author was promoted to the rank of Commodore, and appointed to the command of H.M.S. *Pearl*. From the hour of his arrival at the antipodes, Commodore Goodenough busied himself in a thorough investigation of Australia, New Zealand, and the South Sea Islands, ascertaining the relative dispositions and feelings of the whites and natives, and making himself thoroughly acquainted with the state of the country. His labours have thus been described by an eye-witness: 'He threw all his energies, and they were great, both physical and mental, into the work at Fiji. He would take nothing for granted; personal inquiries and inspection guided him. He went from place to place, seeing first one chief and then another, ascertaining the capabilities of the country, all the time with such a genial bearing, such courtesy and kindness to all, that all alike honoured, trusted, and loved him.'

Especially active in bringing about the annexation of Fiji to Great Britain, his efforts were rewarded in March 1874, when the reigning chiefs made an offer of cession to the British crown. On his arrival at Fiji, the Commodore received a visit from his sable majesty, Flocomban, king of Fiji, whom he describes as 'a dignified and well-mannered man,' and whose good-will he gained by an offering of choice cigars. At Tonga the *Pearl* met with a warm reception; and when the Commodore ordered the band to play for the natives' amusement, their enthusiasm rose to such a pitch that they insisted upon loading their distinguished guests with yams, fowls, and a turtle of Brobdingnagian dimensions, weighing upwards of four hundred and fifty pounds; after which, a Fijian war-dance, accompanied by tremendous waving of clubs and frantic gestures, broke up this unique 'soirée' in the South Seas.

At Montague Island, New Hebrides, our author passed a short time, and found the natives hopelessly addicted to cannibalism. There he endeavoured by the aid of an interpreter to rouse their better feelings, but the attempt was decidedly a failure. So, as our author says, 'There was no help for it but to say in a fatuous way, that man-eating was a bad thing, and to go away and look at the surroundings. There were three old skulls and fourteen lower human jaws near the end of the hut. A quantity of bones of turtle and pigs and fish hung from long strings in the hut, and pigs' jaws from the fences. I never saw a more curious and picturesque place, or one with so decided a flavour of heathendom. . . . The original dress of these people seems to be a broad belt of matting round the waist, while many have bamboo combs in their hair. They all paint the face red and black, and have for ornament round the neck a pearl shell, a plate atop of Holloway's Ointment pot, a tin cover. As a rule, the men and women are very ugly. One dirty grotesque-looking wretch came near us with a nose like one of the hideous Chinese lapdogs.' Our author also describes the idols in this place as very curious, consisting of a head, nose, and mouth, 'gigantic, and with little arms protruding. They are coloured red and white with arnotto and lime, eyes in concentric circles.

Commodore Goodenough was very desirous to visit the island of Santa Cruz (the scene of Bishop Patteson's death), but was dissuaded from doing so, owing to the treacherous character of the natives. However, he eventually resolved upon carrying out the plan, and on August 12, 1875, he landed at Port Carlyle. The natives at first appeared friendly; but on a second visit their behaviour was so suspicious that the Commodore became alarmed, and ordered his men to the boats. In a letter, the last he ever wrote, he describes the scene. 'I saw the native to the left fitting an arrow to a string; and in an instant, just as I was thinking it must be a sham menace, thud came the arrow into my left side. I shouted "To the boats!" pulled the arrow out, and leaped down the beach, hearing a flight of arrows whiz past me. On reaching the boats the surgeon came at once and dressed the wound, burning it well with caustic.' Five days after, he adds: 'I am exceedingly well; my only trouble is a pain in my back, which prevents me sleeping. I don't feel'— Here the writing was interrupted, and not again resumed, as the Commodore shewed the first signs of fatal illness a few hours after these words were penned.

The wound was not at first supposed to be mortal, but in a few days symptoms of tetanus set in, and all hope was relinquished. The good Commodore received the intelligence of his dangerous state with the perfect calm of a man whose whole life had been one long preparation for death. He caused himself to be carried on deck, and while his men gathered round him in speechless grief, he spoke to them lovingly and tenderly, and besought them to follow in his footsteps. The next day he passed away to his rest, so peacefully that the exact moment of his departure could not be ascertained.

So perished a man whom England could but ill spare. Possessed of talents of the highest order, yet modest and unassuming; a strict disciplinarian, yet so beloved by his men that a single word or look was sufficient to enforce obedience; combining the energy of a man with the large-hearted sympathy of a woman and the pure simplicity of a little child, Commodore Goodenough was a rare specimen of a noble sailor and Christian gentleman.

A CHRISTMAS ROSE

It is Christmas Day.

'Glorious Christmas! Everything is radiant to welcome you, from that tiny robin's throat to the vast sheet of snow that mantles the earth.' This grandiloquent speech proceeds from a young person, who is in that state of full content, which must overflow somehow on something, quite independently of any response. That young person is myself; and I am leaning as far as possible out of the large bay-window in our dining-room, during the few moments that remain before our guests will descend to breakfast. I should like nothing better than a race round the grounds, and dare not trust myself outside the door, lest the temptation should be too much for me. My feelings find some small vent, however, in the speech just made, which, to my astonishment, is answered by a strong

arm pulling me backwards, to receive a Christmas greeting from its owner, who proves to be my only brother Charlie.

'And a certain child's eyes have lately contributed more than their share of the "radiant" quality,' he remarks with provoking scrutiny of my face.

'Not at all,' I dissent, with a sudden anxiety for Tim's (my collie's) head, which is hanging peacefully over the arm-chair on which he reposes. 'Is not every one happy?' I continue, as though in vindication of some offence.

'Oh, every one of course'—with an odd smile—'from the over-fed robin to the over-fed bullock,' is the unsatisfactory answer.

The timely entrance of several people puts an end to our chatter.

Let me now introduce my mother, who heads the table I verily believe as graciously as woman ever did. But I will not dwell upon virtues, whose enumeration would only be found tedious, being content to let others discover them. I will only say she has a kind word for all, and is thoroughly in harmony with the day and season. Charlie is so like her, that one description would almost suffice for the two. He is fair and tall, with a presence too friendly to be strictly commanding. She is fair and tall, with a presence too sweet to be commanding. The same frank blue eyes mark both faces. Now a word for the last and least remaining member of the family. I need not say I am a girl; but am bound to say that in appearance, alas! I am behind the others. I certainly possess a shade of my mother's bright hair mixed with my more ordinary brown; eyes to match; and the rest is perversely defiant of rule.

Breakfast is over, and all—about twenty in number—go their separate ways, or the way some one else chooses them to go. I am preparing for the 'round' I before denied myself, when—'Haden't you better come with me, Ethel, for a grand turn?' a voice calls out. 'It will do you a world of good.' The voice belongs to Herbert Leicester, whose father was an old friend of my mother; consequently the son, though not of many months' acquaintance, has soon managed to establish a very friendly footing amongst us, presuming somewhat, with masculine assurance, on bygone times.

I hesitate a minute—only one, however—and then consent. The desired circuit gives place to a ramble with a pleasant companion. We have a long draught of the fine clear air, and return home feeling equal to anything—luncheon included. On our way back we pass through the conservatory. It is really a charming contrast to the outside world. I stand still and wonder, as I compare them. He makes towards a noble bush of *Gloire de Dijon* roses, selects one, adds a fairy spray of 'maiden-hair,' and presents it to me.

'Not yours to give, sir,' I say, laughing, but holding out my hand for it all the same.

'Tis no matter to me whose it *was*,' he replies, with admirable carelessness, 'so that it *will* be yours. I should like to see it in your dress to-night.'

'Very well,' I agree, accepting it, 'though as a rule, I do not encourage theft.'

'Perhaps you will—some day,' he remarks, with amused significance.

I may here mention that we are to have a ball to-night—a real ball, not a scanty collection of relatives and family friends. We hope to gather about two hundred people together, and allowing for a third of them being agreeable, may surely, without over-confidence, expect some pleasure.

Almost before I know it, the day has stolen away; and we are all consigned to our various processes of dressing. This is my first ball; therefore of course I am attired in the orthodox white; and, with pearls on my throat and hair, am not altogether displeased—forgive me!—with the result. As I enter the ballroom, I am amused to see a pert sprig of mistletoe peeping forth and twinkling triumphantly from the centre of a succession of festoons, which decorate the walls. This was evidently our butler's finishing and surreptitious touch, he having inquired if any of that forward parasite should be introduced, and received a negative reply.

'Might not Miss Ethel like to see some?' he had persisted, with the proverbial obstinacy of time-honoured service.

'I think not,' my mother repeated, with a certain old-fashioned sense of propriety awakened at the mere question. However, there it is; and none but the holly-berries seem to blush for it. I also make another observation, which is, that Herbert Leicester is talking to Charlie a few paces off, and I am not a little disgusted at seeing his back—necessarily, I admit—towards myself. As I am so thinking, Captain Brand, who is standing at the door, speaks to me. He is a gentleman of about thirty, tall, refined, and somewhat insipid of looks, but who nevertheless sets no small value on the same. 'May I have the pleasure of the first waltz, Miss Colson?'

I repress an inclination to have one more look in Mr Leicester's direction, and assent with, I fear, an ill grace. As we start together, I notice him turn round and watch us; accordingly, I avert my eyes; for I feel unreasonably vexed at this beginning of the night I have pictured so differently. The music is good, the men doing their best; the floor is good—a long straight length of polished oak—and my partner's step is undoubtedly good; yet I can see goodness in nothing until—we stop, and Herbert hurriedly crosses the room to me. However, I am determined to be chary of shewing my content to one who was, I consider, backward in promoting it; therefore, to his request for the next dance I give as simple a 'Yes' as was ever uttered by country maid.

But he is not slow to take possession of me, and commences at once: 'How unkind of you, Ethel, to escape me like that! I had only that moment been called away by your brother.'

'What does it matter?' I say, regaining my temper very quickly. 'There is all the evening before us.' This is no sooner said than regretted. But what can be expected of such an utter novice as I?

He sees no harm in it, however, but looks down on me with more pleasure in his eyes than I have ever seen there before. 'Yes,' he answers slowly. 'Will you give me as many dances as you can, Ethel?'

'O yes,' laughing off my fit of discomfort as best I can. 'I have heard you are a good dancer, you know!'—of which modification I am justly proud.

He smiles rather grimly, but relents upon noticing his rose comfortably ensconced in my dress. 'Let us begin,' he says; and for the second time I start, but with this difference—I can now see the perfection of everything.

The exquisite melodies of the waltz—Waldteufel's *Mon Rêve*—seem to adapt themselves exactly to this new sensation of enjoyment. How thankful do I now feel for my formerly much despised and abused dancing lessons! Herbert and I are waltzing—not either skipping or lurching, thank goodness. It is over, and he offers his arm for the after-promenade. We stroll into a sideroom; such crowds are moving towards the conservatory.

'Did you like the waltz?' he asks, with a swift glance of inquiry.

As he speaks, I catch sight of my face in a mirror, and am startled at the look of exuberant happiness thereon. 'Very much,' I admit, endeavouring to control both features and voice. 'You must remember this is my first ball.'

'Yes; and—What did you think of yourself in the glass just now?'

'What did I think?' I repeat, after my first surprise. 'That—that'

'That you were looking rather pretty, on the whole?' he suggests, with a quiet touch of humour in the tone.

'I thought nothing of the kind'—with quick indignation.

'Did you not? I did.'

I have not yet attempted to describe this Herbert Leicester. I say 'attempt,' because I must certainly fail. However, mark the following: He is tall and imposing; pale delicate features, contrasting strikingly with so manly a build. His eyes are deep gray, constantly changing; that is their charm, for they look out of a face which might, but for them, be too grave. His hair is wavy and brown. My words can say no more. They cannot reach the myriad subtleties of expression and gesture, the language of body and soul! This last, by the way, is, I need hardly add, put in force with his late compliment.

As we return to the ballroom, our attention is fixed involuntarily upon the hapless row of 'wall-flowers.' To-night, they are few in number; we having purposely invited only the necessary inevitable ones.

Herbert lowers his head as he whispers: 'It is too cruel to have ranged their seats beneath the grapes'—with an expressive glance at the mistletoe.

I resist a strong temptation to laugh at his irreverence, while we pass on.

He writes down his name in my programme for as many more dances as he chooses, and then I am taken away by another partner; after which I busy myself in striving to atone for past neglect of introductions. It is wonderful how wary the gentlemen are in this respect. I am convinced that they nearly all imagine themselves far too perfect to be paired off with any but the loveliest of angels. But I have no mind to humour this delusion, and find that the best method of treating the most fastidious is to present them unexpectedly. Catch them up, carry them along ere they can resist, make the introduction off-hand and rapidly—and presto! the thing's done. The hours fly with wondrous speed, and it is now

supper-time. At this period I espy Captain Brand looking about vaguely, with an apparent lack of 'work to do;' and straightway I make for him, with the view of a final discharge of duty before the next dance, which is Herbert's. He greets me at once with a proposal to go in to supper with him. I am taken by surprise, but manage to rally.

'O no! I couldn't think of it yet. I must see after some of the strangers first.'

'But,' he persists, 'let us be last then. You cannot refuse that?'

He is quite right. I cannot; being scanty of resource, though most unwilling. (There certainly seems an unkind fatality in the arrangements to-night.) I assent; and shortly after, Mr Leicester claims his waltz. At its close—'You will have supper with me?' he says with a glad confidence, which somehow involves a foregone conclusion rather than a request.

In genuine disappointment I am obliged very laggardly to refuse. 'I am engaged,' I reply.

'May I ask to whom?'

'Captain Brand.'

'Oh! I beg your pardon.'

I look up at him, being puzzled at the impatience of his manner; and—inexperienced as I am—read something which makes my heart throb quickly. He is evidently annoyed. Why am I not sorry? Surely this contrary feeling must be quite wrong and most reprehensible. He appears to hesitate, makes some excuse, and leaves me.

A little later, Captain Brand and I follow the crowd. We succeed in finding two seats, which are near the door; and I soon discover that the waiters in passing would undoubtedly brush off any rashly fixed head-dress or other insecure appendage, which sufficiently accounts for the vacancy. Captain Brand having helped me, with solemn deference, to chicken and champagne, prepares to watch me attack them, his expression meanwhile assuming the character of solicitous vigilance.

'Don't trouble any further on my account,' I remark, smiling; 'and if you will now treat yourself equally well, I am sure we shall not do badly.'

He lifts his eye-glass in slight surprise; but obviously it does not enable him to perceive my object more clearly. 'Oh, er—thanks very much; but I will take mine later.'

Thereupon, I submit to fate, though feeling rather in the position of a caged animal—my appetite regulated by my keeper. I fancy too he is afraid of disturbing my operations by conversation, so we remain some few minutes in silence.

Presently: 'Do you not feel the draught, Miss Coleson?'

'No; thank you—not the least.'

'I wish you did, because I could then shut the door for you.'

I chance to meet Charlie's eye at this climax, and it is too much for me. I rise with somewhat precipitate haste, and happily confront the last batch of ladies for supper. They have brought themselves down—fie on the gallantry of Englishmen!—having waited till the last with, I fear, some of the 'sickness' of 'hope deferred.' I assign my place to one, and am about to depute Captain Brand to attend upon them, when he, anticipating

my intention, suddenly offers his arm to conduct me back to the ballroom. By this time my mirth has evaporated and we leave together. When outside, I appeal to his Christian charity, and he promises to return to the uncavaliered damsels if I will give him half this waltz. I consent; but happen at the same instant to glance at my poor rose, which is hanging its lovely head in death. You may think me wildly superstitious; but I am seized with an imperative desire to save it as far as possible. All thought of the charity I advocated is blotted out by this one idea.

'Yes; I will give you the waltz,' I say hurriedly, scarcely heeding his pleased surprise; 'but'—scanning an imaginary rent—'I must first run up and have my dress repaired.' What can I do with him meanwhile? A thought strikes me. 'I shall want a new flower,' pointing to mine; 'will you get me one in the conservatory? I will come for it directly.'

Up-stairs I place my treasure carefully in water, and leave it with a foolish farewell. According to agreement, I then join Captain Brand, who is in the act of gathering a crimson camellia. Its robust colour almost jars after the withered fairness of its predecessor. However, I cannot but accept it; and am not more reconciled upon seeing Herbert rapidly approaching us.

'I have been looking for you in the ballroom, Miss Coleson,' he affirms, his gaze full of displeasure upon the innocent cause thereof—the bright substitute. 'The next dance is ours, I believe?'

'Yes,' I answer; and he goes.

'Which does not account for his hunting you up during this,' adds my companion, who in his turn is apparently out of humour.

But my attention is with Herbert, and I do not answer. I notice that he hesitates, for the second time this evening, when a few yards from us, turns back, and—'Am I to look for you—here?' he inquires.

'No,' I reply quickly, 'in the dancing-room. —Are we not to try this waltz?' I continue, addressing the other.

At the end of it, seeing Mr Leicester stand apart, I order our steps in his direction, and am duly resigned to him. 'Thank you so much,' murmurs the gallant officer; 'that was a bright star in my evening!'

I smile, but mentally note that it will be the last, so far as I am concerned.

Somehow this waltz with Herbert lacks the pleasure of our first. I am half afraid, and wholly repentant of my former triumphant levity of spirit. Is he really offended? And if so, what can I do? Alas! it would be quite impossible and utterly absurd to express contrition for a doubtful offence to one who had never sought it; therefore, wrongly or rightly, I am silent. When at last it is all over, I go in a strange tumult to my room. Everything seems still, except my own heart. I lift the rose impatiently to my lips. 'Does he love me?' I plead of it over and over again, as though the senseless leaves could tell. I lay it at length reverently in a book, and go to bed, to toss restlessly about and then to dream. Love! Is it fair to banish Peace at one's first ball?

The next day several of our guests are obliged to leave us, amongst them Herbert Leicester. To

all appearances, we are on as good terms as ever; but there is a difference, although one only known to ourselves. The evening about which I had thought and planned so much, has left a dissatisfied morrow, and I find myself concluding with the air of a second Solomon: 'Well, I suppose "all is vanity"—"vexation" at any rate!'

It is time for Herbert to start, and I meet him coming down-stairs. He motions me into a side-room. 'I suppose you will forget all about me, Ethel, quite comfortably?'

'Indeed, I shall not,' I assert, regaining my courage. 'I hope we shall soon see you here again.'

'You may be sure I shall come when possible,' he answers with a pleased smile.

'Luggage all down!' shouts a voice from below.

'Here's the rest of it,' cries Herbert in return, shewing himself, after a hurried good-bye. And so he goes, and my pleasure with him.

Nearly a whole year has passed, and we are again preparing for Christmas. Invitations are accordingly finding their various ways about. Need I say that one of them is addressed to 'Herbert Leicester, Esq.?' I have posted it myself, though with little hope, fearing that he may be from home. Captain Brand will not be of our number this time, because—I may as well say so at once—he and I have 'understood' each other; and the understanding to him was not satisfactory. Let me drop the subject henceforth.

A couple of days crawl by; and then, on the breakfast table, I see a letter to my mother, from Herbert. Without a thought, I seize it and master the contents. The result is a quite unconscious repetition of my first words in last year's 'grandiloquent speech.' 'Glorious Christmas!' I exclaim, 'you have brought him back;' and with heedless velocity, I rush up-stairs to find the note's legal recipient. She kisses me, and strokes my hair fondly as she questions: 'When will you learn, my darling, to build less joyously on the future?'

'Never, I hope; for it always outshines the present!'

'Pray God the present may one day be the best!' Her wish, in its sweet prayer, enters deeply into my heart, and brings with it a calmer happiness.

To-day has not time to crawl. I believe it actually skips past, so much must be done and arranged before its successor. The night alone is long; but morning comes at length. 'Let me see! He will be here at 6.5,' I announce to myself, my brows deep bent over the intricacies of *Bradshaw*. Nine whole hours and a quarter to pass! However, other guests claim my attention; and the house begins already to look tolerably well filled. At half-past five, the butler 'wishes to speak' to me. 'If you please, Miss, Mr Leicester is here; and shall I shew him to his room now, or will you or your Ma see him first? I just shewed him in your budwar, Miss, for the moment.'

'In my boudoir?' I repeat.

'Yes, Miss; there was people scattered about everywhere else,' he explains, without the slightest appearance of consciousness, though I feel certain there are grounds for such.

Well, I must admit the room was not an unusual resort of Herbert's, formerly. O for my mastery of *Bradshaw*! All seems in confusion. I wait a minute to steady my thoughts, and then: 'I will go to him,' I reply. I need not have been so careful to 'collect' myself; for he has certainly not done the same. As I open the door, he starts perceptibly and puts down a book, much resembling my especial scrap-album. It is opened; but the tenant of the page is in his hand. It is only—a dead rose.

'I—I beg your pardon, Ethel,' he begins; 'I must explain. I came here not in the best of tempers, yet determined to learn something for myself. I had received rumours of—of another man's attention to you, and your probable engagement; and now, by the merest chance, by taking up the first book near me in this room, I have come upon *this*'—holding up the rose. 'Does it tell me the truth? Has it a right to contradict those rumours?'

'I do not understand,' I protest, feeling in truth much dazed, but alas for that moment's veracity! understanding very fairly.

'Well, it was just this. I unclasped your scrap-book, which opened very naturally'—here he smiles—'on the bulkiest page. That disclosed the flower, which I looked upon with unreasoning disflavour, until it slipped, through my awkwardness, to the ground; and I read beneath, the date of last Christmas Day. Is it *my* gift, Ethel, or am I demented?'

'It is yours,' I confess, with my eyes on the ground, and becoming uncomfortably hot.

'Then you are mine!' he adds, with swift conclusion, taking me deftly in his arms. 'Tell me that yourself, darling, though the rose has said it for you.'

'You know my answer, so well,' I whisper, hiding my face on his shoulder.

'But I want it in words—just one word. Do you love me, Ethel?'

'Yes!'

Reader! can you wonder that I treasure above the sweetest flower blooming, my faded Christmas Rose?

ANOTHER CORN-CRAKE ANECDOTE.

From a gentleman in Monmouth we have the following interesting anecdote:

'In a field in front of this house which was mowed for hay during this summer, three corn-crakes' nests were found. In one the young ones were able to run. After the mowers had passed, the old bird returned, and although naturally most shy, shewed much courage in exposing herself while gathering her little ones in a swath. Towards evening, we noticed that she was on the move; and my children and I watched her while she drew her little ones away, which she did thus: she ran swiftly across to the next swath and hid herself; she then called, and the five little black objects ran across the open space as fast as possible. She repeated this movement from swath to swath until she had taken them into the next field, up some portion of that, and into a third meadow to the safety to be found in standing grass. It was as pretty an instance of maternal love and instinct as I have ever witnessed.'

CHRISTMAS CHIMES.

CHIME on, chime on, ye merry Christmas bells,
For well we love your dear familiar sound;
Voices long silent in your music dwells;

Loved forms long vanished seem to cluster round,
Their fond, true eyes reflecting heaven's own light,
They come, dear whispering spirits robed in white!

The lonely mother, by her childless fire,
At your sweet chiming lifts her drooping head,
While through her bosom steals the fond desire
To hold communion with her silent dead.
She hears your mellow song, and longs to keep
Her Christmas vigils where her treasures sleep.

Your magic voices guide the mourner's feet
To where the loved ones slumber side by side—
'Thou wert my first-born! O my love, my sweet!'
She fondly murmurs, while with loving pride
She smooths a tiny cross, and bending low,
Decks it with holly and with mistletoe.

'An ever joyous Christmas-tide be thine,
My little darling with the golden hair!
There is no weeping where thy bright wings shine—
No breaking hearts, no tresses blanched with care,
No weary counting of the long, long years,
No Christmas garlands wet with mothers' tears.

'Gone, gone! and yet it seems but yesterday.
Since, with dishevelled locks and cheeks aglow,
We laughed together, and in idle play,
Pelted each other with the drifting snow—
Since last I caught thee in my fond embrace,
And showered warm kisses on thy living face!

'For twenty years this little cross hath stood,
Kissed by the sun, and beaten by the rain.
'O she was lovely, innocent, and good!'
For twenty years hath been the sweet refrain
Chirped by the robins through the wintry hours,
Sighed by the zephyrs through the summer flowers!

'A wee blue dress, fruit stained, with brambles torn,
Crumpled and faded, in my chamber lies;
A little hood, that years ago was worn
To shade the glory of two deep blue eyes;
Two tiny shoes, in anguish stored away,
Just as my darling left them—plashed with clay.'

And such a host of tender memories steal
Through your sweet voices, O ye Christmas chimes,
That her poor sorrowing heart begins to feel
The loving rapture of the olden times.
She decks that tiny cross till nought is seen
Save the tear-blurred inscription, 'Mother's Queen.'

'Not lost, but gone before,' she whispers low,
For she has hung her last sweet garland now!
Low droops her head, and while her hot tears flow,
An angel's pinion passes o'er her brow,
And a loved voice is singing in her ear:
'A happy Christmas to you, mother dear!'

PRANKS WITH THE MOUTH.

THE mouth is not to be played pranks with, but it often is so. The heedless practice of putting small articles in the mouth either for the purpose of holding them for a few moments, or for playing some trick, has been frequently attended with very serious consequences. Yet, the practice is common, especially among young women, who may be seen holding pins between their teeth while dressing. Medical attendants in hospitals have frequent cause to find fault with female patients of a humble rank for putting pins in their mouth when they have occasion to remove any part of their dress. From long and unchecked habits, they seem unconscious of doing anything improper, or which might produce unpleasant results.

Children of both sexes seem almost to have an instinctive fancy to put playthings in their mouth, and sometimes therefore give no end of trouble to parents and nurses. Notwithstanding every precaution, distressing accidents occur. A few years ago, a fine boy, son of a respectable man in our neighbourhood, swallowed a small piece of brass chain, with which he had been amusing himself by putting it into his mouth. The bit of chain lodged in the stomach, and though medical aid was resorted to, the poor child languished and died. Only a few weeks ago, as mentioned in *The Lancet*, a young boy in Devonshire died from having allowed a small tin whistle to slip from his mouth into the trachea, where it stuck, and baffled attempts at removal. Death took place from inability to breathe.

Remarkable instances are related of needles which had been accidentally swallowed, finding their way, point foremost, through the sides of the stomach, and thence to the exterior surface of the body, where they are drawn out. It is all a chance, however, that they make their escape in this harmless manner, and accordingly there is no excuse for women thoughtlessly, it may be perversely, putting needles in their mouth. Those who do so run a great risk of perishing in con-

siderable agony. Occasionally, female lunatics in their mad freaks unwittingly kill themselves by swallowing needles which they manage to secrete. A case has been mentioned to us of a most extraordinary degree of mad perversity. A female lunatic had such a morbid craving for swallowing small parcels of needles which from time to time she procured, that at length she destroyed herself. At a post-mortem examination, as many—if we mistake not—as three hundred and ninety needles in a less or more state of corrosion were found lodged in various parts of her body. In another case that has been recorded, the great French surgeon, Baron Dupuytren, extracted two hundred and fifty-four needles through the skin, to which they had found their way from the stomach.

In the narrative of memorable cases connected with Guy's Hospital, there is a curious story of a sailor named John Cummings, who, in a spirit of vulgar brag, and mostly when half-intoxicated, swallowed clasp-knives. In 1799 he had seen a French juggler perform the trick of assumedly swallowing knives of that kind as a public entertainment. The feat was so cleverly performed, that the spectators—or at least some of them—were under the belief that the knives vanished down the throat of the juggler, instead of being put by sleight-of-hand in some part of his dress. The sailor, in his simplicity, was one of the credulous sort; and to astonish his messmates, he began to swallow clasp-knives. He at first swallowed only four, which, fortunately for him, were expelled in the usual way, and no inconvenience ensued. He thought no more of knife-swallowing for six years. In March 1805, when at Boston, United States, he was one day tempted, while drinking with a party of sailors, to boast of his former exploits, and was ready to repeat his performance. A small knife was produced, which he instantly swallowed. In the course of that evening he swallowed five more. The next morning crowds of visitors came to see him; and in the course of the day he was induced to swallow eight knives more, making in all fourteen.

He paid dearly for his frolic; for he was seized

with constant vomiting, and pain in the stomach. Taken to an hospital, he was by efficacious medical treatment, relieved, as he imagined, of all the knives he had swallowed. But in this, he would appear to have been mistaken. Portions of knives undissolved remained in his stomach. The amount of relief, whatever it was, did not cure the poor wretch of his folly. When at Spithead in December 1805, and somewhat tipsy, he resumed his boastfulness of being able to swallow knives, and to amuse the ship's company, swallowed nine clasp-knives, some of them of a large size. Again he became ill, and was in the hands of the ship's surgeon for several months, during which portions of knives were discharged. At length he was admitted as a patient at Guy's Hospital in 1807, and again he came to the hospital in 1808. There he remained, sinking under his sufferings, until March 1809, when he died in a state of extreme emaciation.

This extraordinary case is detailed in the 'Medico-Chirurgical Transactions,' Vol. XII. part i., to which we must refer for particulars unsuitable for our pages. At the post-mortem examination, as many as forty different articles, one of them a lieutenant's uniform button, were found in the stomach of the deceased. The bone hafts of the knives were partially consumed by the action of the stomachic juices. The edges of the knives were likewise similarly dissolved. Nature had evidently made immense efforts to neutralise and get rid of the indigestible substances. The account in the book is accompanied with an engraved picture of the forty articles—a weird assemblage of objects. Taking the case all in all, we should think that in the annals of stupidity and brag there is nothing at all to match it. Among tragical pranks with the mouth, it is unique.

An incident will be in general recollection connected with the late Mr Brunel, the eminent engineer, who planned the Thames Tunnel and the Great Western Railway. One day while diverting a child with tricks of sleight-of-hand, by causing a half-sovereign to mysteriously disappear and reappear, a stunning disaster occurred. The trick consisted in adroitly concealing the coin in his mouth, and pretending to bring it out at his ear. All at once, before he was aware, and to his dismay, the half-sovereign slipped down into his gullet. He tried to cough it up, without effect. There it stuck. Every surgical device was tried to get hold of it without avail. It became evident that if the coin could not be dislodged, fatal results would ensue. It was a matter of life and death. In the dire dilemma into which he had needlessly brought himself, Brunel's presence of mind did not desert him. He devised a wooden structure to which he could be strapped head downwards, in the hope that the half-sovereign would fall out of his throat by the force of gravity. It was a painful experiment, but life was at stake. He was fixed to the machine head downmost, keeping his mouth open. To his inexpressible relief, the coin dropped from its lurking-place and rolled to the floor. The case is memorable for the mechanical ingenuity displayed, and not less so as affording an admonition not to play pranks with the mouth—an admonition, however, which we fear will be of little practical value.

We have just read the following account of the

death at Heidelberg of Mr Adolf Sander, who was formerly in large practice as a physician in Elberfeld and its neighbourhood. One morning in 1874 while dressing he contrived in some way to get a shirt-button between his teeth. Unconsciously, while laughing, the button slipped into the back of his mouth, and thence into the larynx. All the exertions of his surgical friends to remove it were vain. It was ascertained that it sank into the right lung, which soon became irritated. Spitting of blood ensued, and he was himself looking forward to his death as not very remote. He removed to a villa he had near Frankfort-on-the-Maine to pass his last days in quiet. Here he was surprised by a violent fit of coughing, accompanied by spitting of blood, in a paroxysm of which the button was ejected. His health rapidly improved; and in a couple of months, regarding himself as quite cured, he resumed his professional work, and endeavoured to gather up the threads of his former practice. But last year unmistakable symptoms manifested themselves that the lung had not fully recovered from the presence in its substance of a foreign body for several months. He spent the winter in the south of Europe, but returned almost worse than he went. He gradually wasted away, and died.

At present, as is pretty well known, there is a public performer in the art of sword-swallowing, whose pranks are watched with intense interest by crowds of people who take delight in witnessing feats of this description. By long practice from youth upwards, this individual has so trained his throat and stomach that he can swallow a naked sword, twenty-four or more inches in length, point downwards. There he boldly stands in front of a stage, drawn up erect to his full height, with a straight sword in his hand. He throws back his head, so as to make a clear way down his throat, and poising the sword with his hands over his mouth, lets it slip slowly down and down till nothing but the handle of the weapon is visible. In a minute or two he draws the sword carefully up again, and with a look of triumph waves it amidst shouts of applause, as having performed a valiant feat.

We learn that in the course of his performances, a doubt arose as to the reality of his sword-swallowing. It was sceptically imagined that the blade of the sword did not really go down the throat, but went up into the handle, in the nature of a juggle. To settle the point, Dr P. and a distinguished naturalist in the metropolis attended a performance, and after close examination, declared that the blade of the sword actually went down into the stomach.* How such should be without danger to life seemed incomprehensible. But the phenomenon was explained in this wise. Through long pressure, the stomach of the performer had been thrust down from its natural position to the lower part of the abdomen, thus causing a very abnormal condition of things, by which means the sword could be swallowed in its entire length. The whole thing was a violation of nature, and the wonder is how with such derangements it is possible for any one to live. Our informant, Dr P., says that the feat of sword-swallowing, however dexterously managed, and

* A detailed account of this was given in *Land and Water*.

however much the throat and other parts have accommodated themselves to the passage of the weapon, is extremely hazardous. With all the care that may be bestowed, the point of the sword may some day accidentally puncture, or absolutely pierce through the stomach, and death would of course be the consequence. To think of a man playing with his life in this way for the sake of gain and public entertainment!

On one occasion the sword-swallower got into a fix even more dreadful than that of Brunel. He professed to be able to perform a trick with a bayonet fixed on the end of a musket. It was an awfully hazardous prank, far beyond that of swallowing a sword. He held the musket aloft with the butt-end uppermost, and opening his mouth, allowed the bayonet to go down his throat. Having got it this length, he clenched the part of the bayonet next the handle with his teeth, and holding the musket with his hands, to prevent it from swinging to one side or other, walked about with it in this perilous attitude on the stage. Tremendous applause! Now as to what occurred. It reads like a hideous romance.

At a performance one day of the bayonet and musket trick, something was seen to go wrong. There was a stagger, a flutter. The observers were surprised, horror-struck. The swaying of the upraised musket had caused it to snap off, at the part of the bayonet where it was sustained by the teeth of the performer, the result being that the shaft of the bayonet was left sunk out of sight or reach in his throat. Anything more appalling than this can hardly be imagined. Perhaps in the agony of the moment the performer recollected the device resorted to by Brunel in similar circumstances. At all events, he instantly threw himself on his hands, and, with the aid of his assistants, stood with his feet uppermost against the wall. The effort was successful. By its own weight the bayonet descended from its place in the throat, and at length it was pulled from the mouth. A fortunate escape! The dexterity, the fortitude of this remarkable sword-swallower may be matter of admiration, his feats a wonder, but we may say with the old dramatist—

Scarce I praise their venturous part,
Who tamper with such dangerous art.

Whatever feats of skill you are fond of shewing off, we should in a friendly way recommend you to abstain from playing any sort of pranks with your mouth.

W. C.

A SHADOWY STORY.

A TALE OF THE IRISH REBELLION OF '98.

CONCLUSION.

IN less than the appointed time Dickles arrived at the head of some two-and-twenty men, looking sombre enough in their gray overcoats; so without delay, and giving the command in a low tone, Westbury set off on his dreary patrol. The night was pitch-dark; it was long past the hour when the inhabitants of Boreen were accustomed to retire; and so far as the Lieutenant could judge, not a soul was aware of the departure of the detachment. Yet a feeling hung about him,

a curious conviction that, in spite of the utter silence and darkness, such was not the case; and as he left, he threw a last glance at the upper windows of Boreen House, remembering the suspicious creaking he had heard half an hour earlier. Now, however, nothing was to be heard or seen; and in a few seconds the last cottage was lost in the gloom, and the men plodded slowly along the miry road. When five weary miles had been traversed, the party were brought to a sudden halt, by a faint halloo at some little distance behind them. It was repeated nearer and nearer. Westbury was in doubt whether to answer or not; it might be a messenger for them, or it might be a messenger in connection with a very different party, and as by remaining silent he might discover something bearing on the object of the expedition, he did not return the hail. Directly afterwards, however, another shout followed, and this time they could hear '—th, halt!' The number of the regiment to which the handful of regulars belonged being correctly given, the halloo was returned; then the sound of a man plashing through the water in the hollow was heard, followed by a figure which came panting up the slope.

'Who goes there?' was the challenge given by Dickles.

'Be the powers, but it's "who goes there" indade,' said a voice. 'Sure it's meself; an' a mighty fine run I've had afther yeas all the way from the Big Rock of Drome, an' got drowned intoirely in the bogs.'

'Well, who are you, and what do you want with us?' interrogated Westbury.

'It's the Leftenant Westbury I'm wanting,' replied the man.

'I am Lieutenant Westbury. Now say your business, and who you are.'

'Me name is Mike—Mike Rooney, yer honour,' said the stranger; 'but ye'll know the man that sint me. I'm from Dennis Mullany; an' it's a dearly earnt half-guinea I'll have for this night's work.'

'Mullany!' exclaimed Westbury, roused at hearing the name of their principal scout. 'What does he say?'

'He ses,' resumed the man, 'that ye're not to go on wid yer men to the rondyvoo, but to go as quick as ye can to Hoggerty's Mill; an' then, if ye've luck, ye'll nab five or six of the proclaimed boys—rale golden birds.'

'Where is Hoggerty's Mill?' said the Lieutenant. 'Are you to shew us the way?'

'Sure, no, yer honour,' replied the messenger. 'I'm to get back to Dennis as soon as me tin toes will carry me.'

'Here's a man who knows Hoggerty's Mill, sir,' said Dickles. 'He says it's about three miles away, down a lane which turns off just here.'

'But how am I to know that this man is not deceiving us?' said the Lieutenant. 'Mullany may know nothing at all about him.' These words

were uttered in a very low voice, but the messenger's ears were quick enough to catch them.

'Be gorra! but it's roight intoirely ye are, sir,' said the man; 'an' it's meself that's the fool for not giving ye the token. See here now! here's Dennis Mullany's own stick. He saw me at Loughie; an' it's right straight across thim bogs from Loughie to this; an' there's not a boy in the barony but meself could cross 'em at noight. Ses Dennis: Give this to his honour, an' thin he'll know ye're from me. If ye don't, be me faith, ye'll be shot.'

'It's his stick, sure enough,' said Dickles, taking it from the man. 'I have seen Mullany with it a score of times, and we know he's with the Loughie detachment. I suppose it's all right.'

'There's the road, yer honour,' said the messenger, pointing in a direction at right angles with the track they were pursuing; 'an' now I'll be off, wid yer honour's lave.' He turned and walked slowly from them, as if waiting to see them off. The soldiers crossed the mury track which was called a road, and guided by one of their number, entered on a by-way far worse than any of the ground they had yet traversed.

'I don't half like this,' said the Lieutenant, as they started. 'I believe that fellow is still watching us, or listening to us from the bank where we left him. I will question him again.—Go on with the men, Dickles. I will overtake you directly.' So saying, Westbury recrossed the road, and Dickles heard him call to the scout; then the sergeant-major plunged fairly into the lane, and was soon out of reach of his voice.

The Lieutenant was right in his conjecture, for as he crossed the road he heard the messenger commence to run. He shouted to him; but the man did not stop, and Westbury dashed after him. Although a fast runner, yet being embarrassed by his heavy cloak, he did not gain much upon the man, who, however, was evidently close to him, though quite invisible in the darkness. This confirmed the officer in the belief that some treachery was afloat, so drawing a pistol from his belt, he cried: 'Stop! or I fire!'

'We'll see about that!' exclaimed a voice close—appallingly close—to him; and in an instant he was grasped by several men, while as swiftly a cloth of some kind was thrown over his head, effectually preventing him from giving an alarm. 'Bring him along,' said the voice. 'Take him to the Captain.'

'Better send two or three pikes into him,' said another voice, 'and have done wid him.'

'Hold your tongue!' said the first voice. 'This is the officer, and something like a prize.'

While this colloquy was proceeding, Westbury was being dragged over some rough ground, and too well knew that in the darkness there was now little chance of his men finding him, even if they made a search.

The journey did not last long; in about ten minutes they halted; the covering was taken from his face, and then Westbury could see that they were standing in front of some kind of building. He heard a door open, but all was so dark he could make out nothing distinctly. 'What force had you with you, and where did you expect to meet the other detachments?' demanded some

one, whose voice the Lieutenant had not previously heard.

'I daresay,' returned Westbury firmly, 'that you know quite as well as I do; but if you do not, you will not learn from me.'

'Do you know what will be the result of your not answering?' said the other.

'I don't know, neither do I care,' retorted Westbury.

'Then I have done with you,' said the speaker, and turned away. Some angry exclamations which followed, the clashing of weapons, and a stir among those around him, told Westbury that he was in imminent peril, and he momentarily expected to feel the thrust of the deadly pike. One man, with a leap and a yell, came so close that even in the darkness Westbury could see him plainly. 'This is for the English redcoat!' he shouted, and raised his arm. The next instant must have been the soldier's last; but a cloaked figure rushed between them, and a voice, a woman's voice, which sounded wonderfully familiar, exclaimed: 'No; ye don't, Pat! If ye harrum a hair of his head, be the powers, I'll set the boys on ye that will stretch ye low enough!'

'Pike him! Finish him!' broke from several of those around, mingled with oaths in English and Irish; but there was evidently a strong party opposed to violence, although in this case only, as it seemed from the words: 'Ye may pike ivery redcoat in the counthry, an' glad we'd be; but this is a dacent kindly man, wid a gentle tongue an' an open hand.' These were the arguments used; and it seemed to Westbury that blows were struck, so great was the confusion, as at last he found himself in the centre of a group, hurried away he knew not whither.

Not a word was spoken for fully two hours. He could not in the least recognise the country they were traversing; but as he could hear with increasing loudness the dull booming of the sea, he knew they were approaching the coast. Then they halted. Again he found they were close to some building; then two men seizing him by the arm, led him into a barn, for such it proved to be, and closed the door instantly behind him. The long shed was dimly lighted by three or four candles, which snaked and guttered in the draughts; and by their glare he could distinguish some ten or twelve men, all armed, while at a farther corner was a group only just visible in the gloom. Under one of the rude clay sconces, Westbury's conductors halted in front of some men who seemed to be of higher rank, and one of his guard said: 'This is Lieutenant Westbury, of the —th, captured to-night, on his march to the Boreen rendezvous.'

'What do we want of English officers here?' returned one of those addressed, in the harshest tones. 'I thought the boys from Drome knew better what to do with them.'

'So they do,' returned the man; 'but they won't allow this one to be hurt.'

At this moment, engrossed as Westbury's attention was by this conversation, he could not repress a start when a shadow—which even at that moment reminded him of the distorted figure he had twice seen at Boreen House—fell athwart the spot whereon he stood. 'So then, Lieutenant Westbury has been unfortunate enough to be taken in the toils,' said a voice.

The Lieutenant looked round, but only saw a cloaked figure in a slouch-hat, which so concealed his features that Westbury could not judge whether he had ever seen the figure before.

'Yes,' replied the harsh voice; 'and why they did not leave him on the bog is more than I can understand.'

'Never mind that, Connell,' said the cloaked figure. 'Enough blood has been shed without his.—I now promise Mr Westbury perfect safety. He must consent to remain under restraint'—

'You, Decroy! You, of all men!' exclaimed the other. 'I should sooner have expected to find *myself* guaranteeing the life of an English cut-throat.'

'That matters not; I will that it shall be so,' said Mr Decroy as we must now call him; 'and you will please to obey.—Mr Westbury,' he continued, addressing the officer, 'I meet you only to thank you, and bid you farewell. I leave for France within ten minutes—leave for ever, as I know too well; but I am glad to know that at parting I have been able to render you some slight service.'

'The "slight service" appears to be the saving of my life,' said Westbury, returning the hearty grasp of Mr Decroy's hand; 'and considering how often I have started out at night to catch you'—

'Oh, that is nothing,' interrupted Decroy, with a smile. 'It would be ridiculous to quarrel with a soldier for that. I am your debtor for all the kindness and delicacy shewn during your residence at Boreen House, where I believe I have more than once disturbed you. Although you are reputed a brave man, I believe you are frightened at shadows.'

'Why—— Was it then you who——?' exclaimed Westbury.

'It was,' said Decroy, interrupting him; 'and on the last occasion you nearly'—

'The boats are ready, Colonel,' announced a man, approaching them.

'Then we part now,' said Decroy; and turning round, he made a signal to the group which Westbury had noticed on first entering. Several persons now approached, and Decroy, stepping to meet them, returned leading a female figure as heavily cloaked as himself; yet in spite of this disguise there was something in her appearance which made the officer's pulse beat quicker. 'My daughter, on leaving her native land, would join her thanks to my own,' said Decroy with quiet dignity. The figure threw back its hood; and the bright eyes of Kate Decroy met those of the Lieutenant.

'I wish I could impress upon Mr Westbury how sorry I am for much of what must have appeared rude behaviour,' said the girl; 'but he will forgive me when I answer him that it was forced upon me. We are friends, I trust?'

'Friends!' exclaimed the Lieutenant. 'Friends! I shall never cease, Miss Decroy, to think of Boreen, wild and lonely as it is, or to remember those whom I had the honour of knowing there, and whom I—valued and esteemed more than words can express.'

'As a trifling memento of the Decroys, rebels though they were,' continued the girl, 'pray sir, accept this ring.' As she spoke, she drew from her finger a ring, in which a diamond sparkled, and presented it to Westbury with a suspiciously tearful smile.

The Lieutenant was about to speak; but was interrupted by Mr Decroy: 'Farewell, Lieutenant Westbury. For twenty-four hours, you will be held a prisoner here. Pray, do not attempt to escape, whatever apparent laxity may tempt you, for I assure you it will be hopeless. At the end of that time you shall be free. I give you into safe custody.—Sullivan! M'Nally!' [two men came forward in answer] 'Remember—your men, and your men only, guard Mr Westbury; and I look to you for his safety.—Farewell, sir!' With another grasp of the hand they parted. Miss Decroy took her father's arm, several other persons joined them, and in a few seconds more they had disappeared. Then the throng in the barn quickly thinned, until none but the Lieutenant and those who were evidently his guard—his protectors—remained.

He was kept in durance, as Mr Decroy had warned him; and had it not been for a fresh arrival, he would scarcely have heard a syllable spoken during his stay. This fresh arrival was no other than Biddy Quin, whose loquacity made amends for the taciturnity of the guard. She it was, as she speedily told him, who had interfered in his behalf when he was first in danger. 'The saints forgive me!' said Biddy naively, 'if I did wrong.' And being in a most communicative mood, she imparted information to Westbury which cleared up much that had been obscure. She told him how he had thrice nearly discovered the Squire. How the latter being anxious to see the Lieutenant, so as to recognise him, had entered his bedroom by a concealed door, and while looking through the inner window, had forgotten the lamp, and so had thrown his shadow on the table, thus causing the first alarm. How all the household gave him up for lost when Dickles brought the guard, as the Squire was actually in the dining-room when the sergeant-major entered the house. There seemed no possibility of escape; but when the Lieutenant had searched the upper rooms, and had sent Dickles and the soldiers to the rear of the House, the Squire, by way of trying one last almost desperate chance, had rushed up-stairs to the part already examined; but again had almost betrayed himself by his shadow, which was thrown just in front of the officer by the great lamp in the hall. The third escape was on the same evening, when the Squire was attempting to leave Boreen; for he and his daughter were with Biddy—who was to be their guide, being a marvel at threading fickle paths—when the latter came forward to meet him, and artfully—as Westbury could see well enough now—led him back to the village.

Biddy was also loquacious on other subjects of interest to the Lieutenant. Miss Kate Decroy, it appeared, was almost as active and fearless as Mrs Quin herself, and had really ridden out to the bog district to meet the messenger with the money and the letters, as the soldiers had guessed; and had been to meet her father and arrange for his coming to Boreen, when Westbury saw her on that well-remembered moonlight night. She told him too that the flight of Squire Decroy and his friends would have been more difficult, if not impossible, had not Westbury's detachment been set astray; and when the Lieutenant was unable to repress an ejaculation expressive of wonder at his movements being so accurately known, Biddy

laughed, and with a roguish look her eye whispered: 'Walls have ears, sure; an' windies above doors are better nor walls.'

'The creaking of that confounded window was for something after all, it seems,' groaned Westbury. 'But then, Mullany's stick?'

'Oh, the shtick, is it?' exclaimed Biddy. 'It was a lucky thought o' me to take that same whin I was in the quarters of the redcoats wid a message from the praste. I thought it might be handy some day; an' be me faith, it was!'

These and many other particulars Biddy revealed, now that the 'mather' was fairly away. She did not seem to have the least personal fear; and very frankly told Westbury that had it not been for his kindness to the family and to herself—although she made herself quite of secondary importance—she should decidedly have voted for his being piked, and if she had only given the word, it would have been done. Westbury had excellent reasons for believing her.

Although extending over but twenty-four hours, the period of detention seemed long and weary enough. No personal restraint was put upon the Lieutenant, and for hours together he saw no one but Biddy. Once or twice he cast a longing look across the few miles which separated him from Boreen; but Biddy, as if divining his thoughts, said: 'It won't do, Lefthenant darlin'; there's more between you an' Boreen House than brown stones an' green turf.'

Westbury took the hint, and bore his captivity as best he might, until at midnight, as he was sitting alone by a small peat-fire, Biddy roused him by a touch on the shoulder. 'It's time, yer honour,' she said. 'Ye're a free man. Take this bit of a pass.—Arrah! don't frown at it now; higher officers nor you have been glad of the like; an' many a one would have given his gowld an' his lands for that scrap o' paper, when the pikes wor clashing round him. But ye're safe. Not a hair of yer head will be harmed this night; an' no boy from the Drome country will iver hurt ye in time to come—iv he knows ye. So, good-bye, Lefthenant, an' heaven be wid ye!'

With this farewell Westbury departed; and as Biddy had foretold, he reached Boreen village unmolested. His return was very warmly welcomed by his men, especially by the usually composed Dickles, who was quite excited over it. He had of course been sought for, but in a wrong direction, as the French vessel ran in at a point some twenty miles from that at which her enemies expected her. Mrs Decroy and Mrs Claridge were specially gracious in their manner. Miss Decroy, they informed him, was from home for the present; a piece of news at which the Lieutenant was by no means surprised, as he had already considerable reason for suspecting as much.

In the short remainder of his stay at Boreen House, he saw no more ghosts or shadows, nor was he called out on any more expeditions. It was known without his own conclusive testimony, that the proscribed rebels had escaped, and he was soon removed from the district. Soon too his military career came to an end, for some eighteen or twenty months after his residence at Boreen, a fever attacked him, which brought him very low, and during his convalescence, the death of a distant relative made him heir to a moderate fortune. This decided him, and he resolved upon

retiring with such laurels as he had gained; and so, about two years after the events which we have narrated, he removed to the south of England, where at a quiet little watering-place, he sought successfully to gather health and strength.

There were of course many invalids there having the same object in view as himself, and there were many too who were not exactly invalids, but to whom the retirement and peace of S—, joined with its soft yet bracing sea-air, were of value; and to this latter class he decided that two persons whom he often met—or rather whom he often saw at a distance—belonged. In the delightful rides he was now able to take in a low carriage, he frequently noticed two ladies dressed in black; and often he used to speculate as to who they were, and why they always chose sequestered spots for their walks.

One day, during one of his quiet rambles through a favourite clump of elm-trees, he encountered the two mysterious strangers. Drawing aside, to allow them to pass, their eyes met, and each of the three uttered an exclamation of surprise and pleasure. 'Mrs Decroy! Miss Kate Decroy!' 'Mr Westbury!' and then, with as much warmth as though they had been the oldest and dearest of friends, they shook hands. In a few minutes he had learned their history. Mr Decroy had died in France; and Mrs Decroy had been recommended a change to the south coast of England. It was about the time of the brief lull in the long war between England and France, so that she was able to comply with this advice. The two ladies were all frankness and geniality; and in the course of that single interview he felt that he had made, or regained, dearer friends than any others the world held for him. At parting, when he took Kate's hand, a heightened glow on her somewhat pale cheek, shewed that she saw how he had preserved a certain sparkling gift.

Daily they met, and the adventures at Boreen furnished inexhaustible themes for conversation: old Biddy; the nightly excursions; the daring rides through storm and over bog which Miss Kate was forced to take; and even the shadows—though a tear mingled with the old lady's smile over this subject, for she then spoke of her dead husband. Time ran on, and Westbury grew stronger; the drives in the carriage were often exchanged for rides on horseback, and still he felt no wish to leave the little place, even though winter had come and most of the visitors had fled. Mrs Decroy and her daughter also remained—to say this is doubtless to give an unneeded explanation—and indeed the elder lady made no secret of the fact that the economy of a winter residence in the little sea-coast town was as great an inducement to her as was the healthiness of the locality.

As time rolled on— But there! how vain it is to flutter about a flame into which every looker-on can see we are certain to plunge. To make a merit of brevity then, Westbury found opportunities of seeing Kate Decroy alone, and on one of these occasions he asked her to redeem his lot from loneliness; and after some slightly embarrassing references on the young lady's part to her very rebellious instincts, she consented; and we will add, as being the fittest place in which to say it, that these rebellious proclivities on the side

of Miss Kate were purely political, and during a wedded life of many years, never once extended to the domestic arena.

Their permanent residence was in England, and was indeed at the identical watering-place where they renewed their acquaintance, though they made various excursions to Ireland of tolerably long duration. Here they were received with extraordinary demonstrations of friendship and attachment, which at first were rather discomfiting to the gentleman; but he soon got used to them, and his liberality made him as popular as though he had really belonged to the 'ould family.' As for Mrs Westbury, and almost in a greater degree Master Westbury, when he visited Boreen, why, if mother and son had chosen to drive a Juggernaut car through the village, and a sacrifice or two had been needed to give due *éclat* to the procession, there would not have been—so it seemed to Westbury—the slightest difficulty in procuring volunteers. And then there was Biddy Quin, who was pensioned upon twelve pounds per annum, a most contemptible sum for so devoted a servant, or so Westbury argued; but his wife knew better—there was Biddy, we say, as devoted, as energetic, and not less talkative than ever; but holding up her head for all that, as one of the aristocracy, in virtue of her large fixed income! Very few of the incomes at Boreen, alas! were large, and very few of the incomes there were fixed.

And so it came about that whereas Lieutenant John Westbury's acquaintance with the Decroy family was at first of a very cold and shadowy character, he was eventually indebted to it for all the substantial happiness of his life, which was a long one, for both he and his wife lived well into the middle of the nineteenth century, beloved and respected.

SLAVE-LIFE IN BRAZIL.

BRAZIL being the only civilised country in which slavery exists in full force, but which even there, may, let us hope, be reckoned in a few years as a thing of the past, a sketch of slave-life may not be uninteresting.

The staple produce of Brazil for exportation is coffee, which is the result of culture on plantations, known as *fazendas*. When ripe for market, the coffee-beans are forwarded in bags to Rio Janeiro for sale and shipment. The real interest in the work on plantations is centred in the method of slave-labour, which though doomed to extinction, is still in full force. While such is the case, free labour cannot exist. Happily for Brazil, there was a law passed in 1870 destined to put an end to this vile system. It was declared that after 1871 the children of slaves should be born free; so at the present moment there are no slaves under eight years of age. An average *fazenda* in Brazil will have from two to three hundred slaves—men, women, and children. These live in a quadrangle or *quadro*, divided off into a number of small rooms, each room being inhabited by one or two slaves. The first bell rings about half-past three in the morning, when they get up and make some coffee. At four the second bell rings, when

they have 'to form;' that is, they are drawn up in line and inspected, to see none is missing. The field-labourers are then marched off, each one with a basket on his back. The work that these have to do is the hardest; toiling all day in the hot sun, hoeing the weeds between the coffee-trees, planting Indian corn, or picking coffee. They work in gangs of eighteen, each one with a *feitor* or overseer, who is himself generally a slave, and is provided with a whip and *palmatoria*. This latter instrument is made of wood, shaped like the palm of the hand, and fastened to a handle about a foot long. The wood is about half an inch in thickness, and has three small holes bored through it, and is a common mode of punishment, especially for the women and children! The 'field-hands' are out all day, stopping an hour and a half for breakfast, and an hour for dinner. But the slaves who work in the fields are not more than twenty-five per cent. of the whole number; the rest being carpenters, blacksmiths, machine-hands, or infirm patients. Though slavery still exists in Brazil, it is perhaps less unendurable than that which exists in certain other countries, inasmuch as a good man has the chance of getting on and ameliorating his position. He may become a *feitor*, and then he would have a separate place to live in; or he is put to work about the house or in the garden; while the most intelligent boys are made to learn some trade, and often turn out good blacksmiths, stone-masons, &c. At half-past seven the bell rings to leave off work. Until nine they can do as they like; then the second bell rings, and they are locked in for the night.

The punishment mostly used on *fazendas*, and one which the blacks stand most in dread of, is the stocks. Each plantation has two pair—one for the men, the other for the women; and it is most curious the dread the blacks have of them. They would much rather be beaten than pass one hour in them; and accordingly this punishment is reserved for the graver offences, such as stealing and fighting; in fact if it were not for this latter, the stocks would have very few occupants. But the blacks are very quarrelsome; hardly a day passes but two blacks have a set-to, which ends in one going to the infirmary and the other to the stocks. Most *fazendas* have a chemist's shop or *botica*, and two infirmaries, one for the men and the other for the women. A great many slaves suffer from rheumatism and heart-disease. The former comes from the exposure they have to endure. The slaves are also good hands at shamming; they look upon a week in the infirmary as a sort of holiday, and once or twice a year each man is seized with a pain in the head or in some part of the body, which gets wonderfully better towards the end of the week. The owners do not mind them shamming now and then; they say they work the better for it afterwards.

The holidays that are strictly observed are St John's Day (24th of June), Christmas Day, and the Thursday and Friday before Easter.

This last is more of a fast than a feast; but the former two are quite given up to jollification. A fat bullock is killed, and *aquadiante* or white rum circulates freely, while dancing is kept up the whole day—a weird wild kind of dance, imported from Africa, in which the central figure is the dancer; while around him in a ring are the spectators, now singing in a low monotonous tone, now shouting at the top of their voices; the only music being a kind of drum, made of a hollow log of wood, and covered with a piece of raw hide. Thoroughly they enjoy themselves; and these feasts are looked forward to and remembered with pleasure.

On most *fazendas* the slaves have Sundays to themselves, when they cultivate their gardens, while the women wash their clothes. If any of them choose to work on Sunday they get paid for it, while on St John's Day it is the custom to give a small sum to each slave. All are supposed to belong to the Roman Catholic Church. But their religion is an extraordinary mixture of Romish ceremonies and African fetishism. They pray to the Virgin, wear charms made out of old bones or snakes' tails, and devoutly believe in an evil spirit, who wanders about in the fields after dark seeking whom he may devour. On every *fazenda* there is a building which does duty for a church, with a large wooden cross inside. Every Saturday night at nine o'clock the cross is lit up by half-a-dozen candles, and a carpenter or blacksmith who has been taught to say 'mass,' officiates as priest.

Their food is simple, and consists of Indian-corn flour made with grease into a sort of pudding. *Feijon* is also an article of diet that is not confined to the slaves, but is used in every household in Brazil. It is a stew made of small black beans, with plenty of bacon in it, and sometimes the dried meat that is imported from the River Plate. In fruit the blacks are well off; oranges, bananas, and pine-apples grow wild all over the country. Coffee forms their chief beverage; and on wet days or very hot ones they are allowed the white rum of the country. This rum is made on the place from the sugar-cane, and is the only drink that can be had pure in South America.

The value of a slave depends upon age. A young mechanic would be worth from two to three hundred pounds sterling; a field-hand about two hundred, and a woman from eighty to a hundred and fifty pounds; so in self-defence the owner has to treat them well, just as a man would take care of a thorough-bred horse. They are handed down from father to son, and except in cases of failure, are not sold out of the family. Often the owner liberates in his will certain of his slaves. By Brazilian laws, no child can be separated from its mother under eight years of age, nor can they be set to work until then; while the owner has to keep a register of all births and deaths.

How wrong the system of slavery is, and what harm it does to a country, are evident to any one who has travelled in Brazil. There can be seen a fine country, endowed by nature with everything conducive to greatness, reduced to a worn-out and ruined state, and all owing to this wretched system. The freed slaves will not work while

slavery remains; and free labour will not come; while year by year the hatred between the slaves and their masters is becoming wider, and the crime of murder is becoming more and more rife.

STUDIES FROM LIFE.

MY MYSTERIOUS PATIENTS.

Who could they be? There was an aristocratic and even distinguished air about them which told unmistakably of high-breeding. Who could they be, and what could possibly have brought them to Donjonville? These were the queries that buzzed about from mouth to mouth one Sunday after morning service as neighbours and friends jogged gossiping homewards, and they formed the staple topic of conversation at every Donjonville dinner-table that day.

The objects of all this curiosity and excitement were two strangers, a lady and gentleman, who had made their appearance that morning in the Government Chapel and, it is to be feared, had sadly distracted the attention of the congregation. For strangers of any kind were a rarity at Donjonville, but strangers of this class were almost unknown. They were certainly a remarkable-looking couple—undoubtedly husband and wife. The lady was very pretty, of tall and graceful figure, but fragile and delicate. The gentleman was tall, slight, and handsome, but he too was evidently not strong. Both were young, apparently under thirty. It was soon ascertained that they were lodging at Mrs Tofts's. Now Mrs Tofts, a round, motherly, apple-faced woman, whose gorgeous shawls were one of the sights of Donjonville, kept an exceedingly select and respectable lodging-house. She had been lady's-maid in a good family, and it was well known that she was very particular as to the sort of persons to whom she let her lodgings. To be a lodger at Tofts's was indeed a stamp of gentility which Donjonville 'Society' never failed to recognise. Moreover, as Mrs Tofts was a little woman who possessed even more than the usual appetite of her sex for gossip, it was fondly anticipated by the ladies of Donjonville that they would soon be acquainted with all that was to be known about the new-comers. Here they were destined to dire disappointment. Mrs Tofts, false for once to the instincts of her sex, stoutly refused to give any information whatever about her lodgers, declined even to mention their name, but gave her baffled questioners very plainly to understand that the lady and gentleman desired the strictest privacy and seclusion, and would rigorously deny themselves to all visitors. The curiosity of Donjonville was more than ever piqued by this rebuff, and finally in despair the strangers were set down as a standing mystery; a state of things which had this advantage, that it allowed boundless scope for speculation and conjecture, and provided a permanent problem, to the solution of which Donjonville Society could at any time devote itself in default of anything fresher.

I had then been settled for three years as a

doctor in Donjonville, and was beginning to get a pretty fair practice. Like everybody else, I had had my curiosity temporarily aroused by the arrival of these mysterious strangers, and by the impenetrable secrecy with which they endeavoured to surround all their doings. But my curiosity soon waned, and had almost died altogether, when it was awakened again by an unexpected incident.

I was sitting alone one evening, dozing by the fire after a more-than ordinarily hard day's work, when I was roused by my servant, who informed me that a gentleman wished to see me in the surgery. I went at once, and found my visitor to be the mysterious lodger at Tofts's. He bowed to me, and said: 'I have come to consult you, doctor, on a delicate matter. My landlady Mrs Tofts was good enough to recommend me to you. I may as well say frankly at once that I desire all that I say to you to be considered as spoken in the strictest confidence. I have reasons, very strong reasons for keeping all that concerns myself and my wife from the tongues of the prying gossips of this place. I cannot, even to you, reveal my name or any facts whatever relating to my past history or that of my young wife. I am simply known to my landlady as Mr G——, and it is as Mr G—— only that I must be known to you. Now, under these circumstances are you willing to give me your professional assistance and advice?'

As I hesitated for a moment, he said quickly and with great earnestness: 'If it will be any relief to you, I can assure you most solemnly, on my word of honour as a gentleman, that I am guilty of no crime, and that it is only for sad family reasons that I decline to reveal my identity.'

There was something so noble and true in his face, that I was ashamed of my momentary suspicions, and said: 'Forgive my not answering your candid appeal to me at once, and believe me when I say that I do not for one moment suspect you of anything criminal. You have spoken to me frankly, and I tell you as frankly in return that I shall respect your desire for secrecy, that I shall ask no questions as to your past or present except such as may be necessary in my professional capacity, and that my assistance and advice are at your service.'

He held out his hand as I finished, and shook mine warmly.

'Sir,' he said, 'I thank you for your kindness and consideration. I have need of a friend here, and if I mistake not, I shall find one in you.' I assured him that he might rely upon me, and then he proceeded to tell me why he had called. His wife, he said, was shortly expecting her first confinement. She had never been strong, and he felt that her case needed special care and skill. He wished me to attend upon her. I promised to do so; and then lowering his voice almost to a whisper, he said with a strange nervous twitching of the face: 'And now, doctor, I have one more request to make. I—I am not strong myself; I fear that I inherit heart-disease. Will you examine me and tell me the truth?'

I consented, and found that his heart was in a very weak state.

'You have heart-disease,' I said; 'but it has not reached a dangerous stage—with care and quiet, you may live to be an old man. But you

must avoid all violent excitement—any sudden shock might do you serious harm.'

'Thank you,' he said, with a desperate effort to appear calm; but his voice trembled and his lips quivered as he spoke—'thank you. I am very grateful to you for your candour. You will call soon upon my wife?'

'I will call to-morrow,' I replied; and with that we bade one another 'good-night.'

The next day I paid my promised visit to my new and nameless patient. I found her, as I had expected, very weak and delicate, and I had serious apprehensions of her coming out of her trouble safely. As I was leaving the house, I was waylaid by Mrs Tofts. She was yearning to have the embargo so long laid upon her tongue removed, and she thought there could be no harm in gossiping with me upon a secret of which we were the sole repositories. The good woman confided to me that she had been deeply interested in her lodgers from the first.

'It's queer, you know sir,' she said, 'their givin' no name; but the gentleman assured me that he had good reasons; and as I could see he was a gentleman, and she a lady, born and bred, and as they paid handsomely in advance, I made no more ado about lettin' the lodgin's to them. For I will confess sir, that I took a fancy to that poor delicate young creature the minute I set eyes on her. There's some big sorrow sir, at the bottom of it all. They has letters addressed to 'em at the post-office; but only initials on 'em—"W. G." or "L. G." I know he's "W. G." and she's "L. G.," because I've often heard her call him Walter, and him call her Louie and Louisa. But I knows no more, and I wants to know no more, for I ain't one o' your pryin' sort.' And here Mrs Tofts bridled up and mounted her high-horse in a state of virtuous dignity. I told her that I knew no more than she did, and that, like her, I was under solemn promise not to reveal to any one even the little I did know.

I saw a good deal of Mr and Mrs G—— during the next few weeks, and the more I saw of them the more I liked them. There was a refinement about their manners and conversation which charmed me greatly. We were on terms of almost intimate friendship; but no allusion to the past ever escaped either of them, nor did they once lift the veil of secrecy which hid from me their name and antecedents.

It was about six weeks after Mr G——'s first visit to me that the summons which I had been daily expecting came. I hastened at once to the bedside of my patient, and never left it for many hours. It was a terrible and trying time, for her condition was critical in the extreme. And then, as if there were not sufficient strain upon my nerves in attending to the wife, there was the husband lying in wait to start upon me like a ghost, whenever I left the bedroom, with his pale, eager, wistful face, his anxious eyes, and his earnest questions: 'Doctor, how is she now? Is she better? Will she pull through?'

The child was still-born; and I shall never forget as long as I live the look of agonised disappointment on that poor young creature's face, when in reply to her request that she might see her baby, I was forced to tell her the bitter

truth—that it had never breathed. It seemed, when she heard that, as if all hope had faded out of her life. She wept like a child, for the child that was dead before it was born. She would not rest, however, until she had looked upon the face of her dead baby. I allowed her to see it, for I was afraid to thwart her wish. The nurse brought it to her and laid it in her arms as she sat in the bed propped up with pillows. I have never seen a more touching sight than that of this young mother looking down with unfathomable depths of yearning love in her sad eyes upon the little white waxen face of her dead first-born. It was only with the greatest difficulty that I could induce her to part with the lifeless little body; she clung to it with desperation, and at last the nurse had almost to use force to get it away from her. Then, when it was gone, she moaned for hours, and would not be comforted.

All this time her husband was nearly distracted. For three days and nights he had not even sat down, I believe, for five minutes at a time, certainly had never slept nor changed his clothes. On the fourth day I had positively to order him to bed, for he was worn to a shadow, and with his haggard face and hollow cheeks looked almost as ill as his wife. As for her, she grew daily weaker and weaker. I knew that the end was not far off, yet I dared not tell the truth to him. All his happiness seemed bound up in her, and I dreaded the effect of any sudden shock upon his heart.

For a week I went regularly twice a day to visit my patient. I had paid my second daily visit one evening about eight o'clock, and had left her gradually sinking, but apparently likely to linger for several days. My day's work had been exceptionally harassing and fatiguing, and I went to bed early. At midnight I was roused by a violent peal at the bell. It was a message from Mrs Tofts to the effect that I was wanted immediately, as the lady was very much worse. In a few minutes I was standing by the death-bed of Mrs G—. I saw at once that I could do nothing, that a few hours—possibly a few minutes only, were all that remained to her of life. A strong paroxysm of pain seized her soon after I arrived, which I thought must inevitably have proved fatal; but it passed away and left her alive. She lay for some minutes with her eyes closed, to all appearance unconscious. Presently, however, she slowly raised her eyelids, and I heard her whisper in a low voice, but quite distinct and clear: 'Walter, Walter, dear!'

He was sitting with his face buried in his hands; but her voice reached him, and lifting his head he said: 'My darling! yes, I am here.'

In another moment his arms were round her, and a smile played over her white and wasted cheeks as he bent down and kissed her passionately. She had just strength enough to raise her arm and let it fall round his neck. I stepped back, and left them thus infolded in a last embrace. I cannot tell whether they whispered to one another or not; they might have done so without my catching the sound. At last I saw a sudden movement of the counterpane, as if it had been shaken by a strong shudder. I stepped softly forward and looked at her. I saw her open her eyes wide and fix them on her husband's face; her lips parted, as if she were striving to speak. He raised his head, and

for a moment they gazed at one another with such a strange mixture of passionate tenderness and wan despair in their eyes, that the tears came to my own and blinded me. When I looked again, his lips were pressed to hers, and her face was hidden from me. A few moments later I saw the fingers of the hand that rested lovingly on her husband's neck close tightly and convulsively, then relax and hang loosely from his shoulder. By that I knew that she was dead. I did not venture to disturb him. I thought that the sudden clammy chill that came over her face, as the warmth of life fled from it, must have told him the awful truth. But he never stirred, and gave no sign that he knew it.

I left the room for a few moments to tell Mrs Tofts and the nurse that all was over. When we re-entered, we found the husband in the same position, kneeling with his face pressed to hers. I went up to him and touched him; but he never moved. I laid my hand heavily on his shoulder to rouse him. The arm which was lying on the bed with the hand clasped in the wife's hand, slipped from her nerveless grasp, and fell limp and lifeless by his side. I was startled; he must have swooned. I bent over him with my face close to his. *He was dead.*

Without a word or a groan, his life had ebbed silently away with hers, and husband and wife had gone out hand in hand to explore the undiscovered hereafter. I cannot say positively now which of the two died first. For all I can tell, he may have died before her, though there could not have been more than a few minutes between the two deaths in any case. I had known all along that any sudden shock would be fatal to him, and weakened as he was by nervous anxiety I was not surprised at the result.

A young curate named Hawdon, who was the only other person in Donjonville besides myself who had been allowed to visit them, assisted me in searching among their papers for some clue to the previous history and real names of the unhappy pair. In the little room which Mr G— had used as a study, we found an open desk and a heap of charred paper in the grate. It almost seemed as if he had had a presentiment of his end, and had deliberately destroyed everything that could throw any light upon his antecedents. We found no clue beyond two handkerchiefs marked with a coronet and the letter G., and two rings, one with the initials 'L. G.,' the other with those of 'L. N.' engraved on them. The latter we concluded must have been Mrs G—'s maiden name. A small sum of money and a few articles of jewellery were all the valuables we discovered. These I took charge of. The linen and clothes were left with Mrs Tofts.

We buried husband and wife in one grave in the little country churchyard about a mile from Donjonville. Hawdon and I at our own expense erected a simple tombstone, bearing this inscription:

Sacred to the Memory of WALTER G—, and his beloved Wife, LOUISA G—, who both died January 18th, 1856. 'In their deaths they were not divided.'

I inserted an advertisement in the second column of the *Times* announcing their deaths, and stating that I should be glad to communicate

with any one who had known them. But I received no answer; and from that day to this, I have never solved the mystery which hangs over the grave of Walter and Louisa G—.

THROUGH THE FERN.

It is perhaps safe to say that no part of Australia is at first sight so thoroughly un-Australian as the eastern and north-eastern portions of Gippsland. Here the barren sandy plains and 'eternal gum-trees' of the surrounding districts are no longer the chief, if not the only objects in view; and instead of one monotonous monotone of colour, the traveller is refreshed by myriads of gorgeous blossoms and flowers, rare plants, and trees of great beauty, and a correspondingly marvellous diversity of life. From luxuriant valleys long ranges covered with sassafras and peppermint swell like green waves in every direction, and beyond their rounded summits the lofty heights of a continuous mountain-chain rise abruptly into the dark blue of Australian skies. Some of these mountains are very striking in their bold outlines, and in their massive and peculiar sculpture, several peaks reaching an altitude considerably beyond the highest British summit. (Snow lies on many of them for nine months in the year.) The creeks and rapid streamlets flowing down these mountain gorges and winding through the ranges are, moreover, clear as the trout-streams of Scotland, and altogether unlike the typical Australian 'creek.' I visited this portion of Gippsland in the full tide of summer, and it is almost impossible to describe the fresh beauty and luxuriance it presented in contrast to the other parts of Victoria I had seen.

Leaving our halting-place, near the source of the Yackandandah Creek, my friend and myself started one morning in February for a ride south through the ranges. Although early, the heat of the sun was already very powerful; yet the effect it had upon us was more bracing than enervating, such is the clearness and dryness of this Australian atmosphere.

Commencing our journey and following a well-defined bush-path under the tall gums, gay with myriads of parrakeets and rosellas, and resonant with the harsh shrieks of indignant cockatoos, we come at last upon more varied vegetation, and find ourselves passing through one of those beautiful fern-forests for which this division of Victoria is more especially famed. One word only as regards the bush itself. It is a somewhat prevalent idea at home that an Australian forest—the *bush* of the colonists—is either an inextricable jungle, or at least a woodland dense with an intricate parasitical undergrowth. But this, while frequently the case in the gullies and valleys of the higher parts, is not a characteristic of the bush proper. This latter consists of an endless 'round' of similar trees growing at a considerable distance from each other, so that a horseman can easily ride through them at a good pace without any unusual caution. I say 'round,' for Australian woods have the appearance of endless circles; and it is this aspect of theirs which renders it almost impossible for any one but a native to find his way through them without a track, blazed trees, or a compass. The unvarying monotony of the trees, the regular distances between them, and the

absence of any forest landmarks, render the bush far more bewildering than the densest English forest.

But on leaving the bush proper and entering one of those forests composed of tree-ferns and beautiful varieties of *Eucalypti* and *Acacia*, this undergrowth becomes more and more marked. Indeed, in many parts of Gippsland the explorer would make but slow progress, as advance can only be made by the tedious and fatiguing process of cutting one's way.

On first entering this scrub the scent of late-flowering wattle strikes my companion and self as peculiarly delicious, mingling as it does with the aromatic fragrance of the peppermint and other allied plants. The clear musical notes of the magpie swell most charmingly through the still air; and above the chatter and screaming of breakfasting parrots and busy butcher-birds gurgles every now and again the hoarse chuckle of the laughing-jackass. Suddenly, from some unknown cause, there ensues an almost complete silence; but before many seconds are over, a shrill burst of laughter comes from the depths of the forest, succeeded by peals of the same demoniac jubilation from seemingly every quarter; and as if indignant at some slight, the parrots and cockatoos redouble their shrieks, and the parrakeets and rosellas and lorries dash to and fro among the branches of the trees like tiny red and green meteors. The shrillness is astounding, and is increased by the incessant *birl* of the cricket-like *cicada*. It is some minutes at least before the ornithologic vituperation calms down. Here, amid many beautiful varieties of wattles, we notice the weeping myrtle, the native cherry, the musk aster, one or two varieties of honeysuckle, a beautiful climber, probably a clematis, a few magnolias and orchids of resplendent hues, and some particularly fine grasses—besides many other flowers and shrubs unknown to unscientific eyes. Above these wave in intricate profusion the sturdy branches of the *Dicksonia antarctica*, and as we proceed farther, that still more graceful fern, the tall *Alsophila australis*. After we have ridden for some time, we come suddenly to a small creek, or rather pool, surrounded by a beautiful species of iris; while all around us are thick magnolias, whose delicious fragrance makes the air seem heavy with sweetness. We have never before or since seen this shrub in such splendour and luxuriance.

As we ride on, the sun grows higher and higher in the heavens, and a gradual silence seems to be creeping over the forest with the ripening noon. The scrub, which had lately been so full of life, appears to be deserted by its noisy denizens, and only at rare intervals the muffled chuckle of the jackass falls on our ears. Hark! what was that? Like a far-away village-bell, a soft sound rings through the still air, and now another and another! My companion whispers to me: 'The bell-bird!' The solemnity of the noon seems to deepen, and the promised vigour of the day to have subsided into a luxurious dream. We dismount, and tying our horses to a tree, betake ourselves to mid-day rest for an hour or two. As we lie there lazily smoking, with the scent of the magnolias in the warm air, and the dreamy call of the distant bell-bird rising and falling at solemn intervals, we get drowsy, and perhaps just

a little sentimental. However, it does us no harm, and adds very much to our enjoyment. From our resting-place we can just see the blue line of a distant range rolling away northwards, and behind it some outlying summit of the misty Bogong. Not a breath stirs; hardly any sound falls upon the ear. I think of that mystic land

In which it seemed always afternoon,

and feel as if I too had partaken of the lotus-juice, and had put away all things of that world in which I late had part, and fallen into a sweet dream, never to fade until it should imperceptibly merge in the indistinct shadow of its twin-sister death.

Morning and evening the Australian forest is awake; at noon it is asleep. No greater contrast can be imagined than between the morning hours and those at mid-day. In the former, the very flowers seem to possess an active existence. Myriads of such, larger and more brilliant than those under English skies, load the air with the sweetest scents; magnificent tree-ferns wave their fronds or branches in the light breeze; on old stumps of trees, great green and yellow lizards lie watching for their prey; the magpie throws her voice from the wattles, and possibly the lyre-bird in the denser scrub; and in the tall gums, numberless parrakeets, parrots, rosellas, cockatoos, butcher-birds, love-birds, &c. are screaming and darting to and fro. But by-and-by the intense heat will silence all these, and nothing will be heard but the chirp of the grasshopper and the shrill sound of some unseen insect. At twilight again there is a revival of life, but not of so cheerful a description. The cicadas shriek by myriads their deafening 'p-r-r-r-r'; drowsy opossums snarl in the gum-boles; and flocks of cockatoos scream as some great gray kangaroo bounds past them like a belated ghost. If there is marshy ground near, the deep boom of the bittern, the wail of the curlew, and the harsh cry of the crane, mingling possibly with those of a returning or passing flock of black swans, will add to the concert. In a moment of silence one may be startled by the mocking laughter of the jackass, or the melancholy 'mo-poke' (or 'more-pork') of the bird of that name. The dead of night is not so still as the universal hush of the burning noon.

As the afternoon grows, we half reluctantly continue our way. Leaving the magnolias behind us, we pass through a perfect fern paradise, nothing meeting the eye but tall tree-ferns above, and innumerable ferns proper of all sizes beneath. The orchids here are also very plentiful, and a beautiful creeper, whose name I cannot at present recall.

Shortly afterwards we emerge from this intricate scrub and enter an abrupt belt of gums; passing through which we come upon a sloping plain of very green grass, considering the late season. The sight is now a very beautiful one. We stand upon a kind of plateau, and can see for miles, north-east, east, and south. Below us is a deep gully, dense with tree-ferns. Rising from this, a monotonous wall of sassafras, white-gum, stringy-bark, &c. rises sheer back till it merges in an olive wave that perpetuates itself in endless rolling ranges, getting bluer and bluer as they sweep into the distance, until their purple

lines break against the solemn summit of Mount Kosciusko in the east, and in the south-east against that great succession of towering peaks which guard the sources of the Murray River. Mount Bogong heaves his rounded shoulders apparently close at hand; and that most beautiful of hills, Mount Feathertop (six thousand three hundred feet), rises in silent grandeur into the serene southern skies. Like a twin-brother, the rugged mass of Mount Hotham (six thousand one hundred feet) towers alongside of this Ben Nevis of Australia. So intensely clear is the atmosphere, that the tree-clad slopes of Mount Feathertop are as distinctly visible as though but a mile or two away. The whole scene is inconceivably beautiful, and one never to be forgotten. As the afternoon wears on, it becomes still more so; for that magical blue that shrouds so many of the hill-districts of Australia in its soft loveliness just before the close of day, begins to steal forth from apparently the farthest eastern ranges, and falls like a transparent veil over mountain and height and drowsy slope. Only those who have seen in the mountainous districts this ineffably delicate and tender blue, can know what a magical effect it has, even on those ranges covered with nothing but the sombre olive of blue-gum foliage. It has a strange dreaminess or unreality about it, and seems to spiritualise every object it infolds.

As the sun sets beyond the unseen Buffalo Mountains in the west, its last rays light up the sides of Mount Bogong with a rich magnificence of colour; and of a sudden as it were, the beautiful peak of Feathertop flashes into extraordinary brilliance, while its topmost heights glow as with fiery and molten gold. For a few moments the hills and ranges seem to be drawing towards us, so extraordinary are the atmospheric effects.

I had one regret—that I had not witnessed this magnificent scene from the summit of Mounts Feathertop or Hotham. Such a scene has been elsewhere eloquently described, and I cannot refrain from quoting from the Government Report the passage in question: 'As we made the ascent towards Mount Hotham, our attention was attracted at first by the rocks and the vegetation. . . . On the right appeared a mountain rich in bossy sculptures that attracted all eyes. It glowed in the sun with all the brightness of the emerald, and over it—as it seemed like waves—flashed ever and anon pale tints of carmine and purple. In hollows on its flanks lay in patches herbage of a vivid green, shewing where the snow had just disappeared—cradles of young glaciers, that can never mature. The high Bogong plains separated from us by deep chasms and wide valleys, out of which arose solitary peaks and broken ridges, seemed, as we gazed on them, to be sleeping; the slopes were scored, but not deeply, the even line of the plain was not broken, and the light of the sun fell on them softly, not making deep shadows and shewing sharp contrasts, as in those parts where the denuding forces had worked fantastic hollows and carved long straight lines for the discharge of melted snows.'

'The Bogong plains were sleeping in the thin folds of pearl-gray and pale-purple mists that encompassed them; and these mists hid from us Mount Kosciusko, Forest Hill, the Pilot, and the lofty ranges lying to the eastward. Towards the

south, Tabletop, with his capping of volcanic rock, stood in the centre of an amphitheatre, and Mount St Bernard and the Twins shewed their peaks on the west. Rising to a greater height, we beheld, on the north and north-east, all the lofty eminences whose springs feed the Murray; and we stopped here, satisfied that Nature could afford no grander spectacle. . . . The magnificent mountains, whose crests seemed to lift themselves as we ascended, appeared from this point, tier upon tier, far into the blue distance. The deep gorges, almost lost in haze, as we gazed downwards, shewed, through the haze, something of their gloomy recesses.

Before turning our horses' heads towards the south-west, where, a few miles farther on, lay our halting-place, we took one long farewell look at the beautiful panorama spread out before us; a sight worth having come a long way for. The sun had set, and the splendour had gone with it; but instead, a calm solemn beauty overspread every object. The deep blue was deepening into purple; and all at once it seemed as if a lamp had been lighted in the sky as Sirius flamed through the darkening dusk.

THE MONTH. SCIENCE AND ARTS.

THE President of the Royal Society, Mr W. Spottiswoode, in his anniversary address to the Fellows, mentioned that in their last session more 'papers' had been sent in for reading than in any previous session; which we may perhaps take as evidence that depression of trade has not depressed science. The ordinary meetings of the Society are held on Thursday from November to June at 8.30 p.m., which for some people is much too late, and the question of a change has been raised more than once. The Academy of Sciences at Paris hold their meetings at about three in the afternoon. Mr Spottiswoode suggests that the Royal Society might meet at five, which would allow time for the customary proceedings and for the social requirements at home. In their early days the Society used to meet at 2 p.m., but fashion gradually introduced a later hour. To revert to former practice would be an indication of vigour which might have a salutary effect on other Societies.

The advantage of the electric light in scientific experiment and illustration is now fully recognised. The President surprised and gratified the meeting not a little by making an offer to the Society of an eight horse-power gas-engine, and announcing that Mr C. W. Siemens would give a pair of dynamo-electric machines, one for alternate, the other for direct currents. These machines, driven by the gas-engine, will produce sufficient light for experiments and to illuminate the halls of the Society.

Not least important among the topics of the address was the Government Fund of four thousand pounds for the promotion of scientific research, which is now in the fourth year of its existence. Four thousand pounds annually have been allotted in various sums to scientific investigators in Great Britain and Ireland; and the question now is, have the results been adequate to the outlay. It is a serious question; and we may believe that on the answer depends the

willingness of the Treasury to prolong this financial experiment beyond the term of five years originally proposed. It would therefore be advisable, as Mr Spottiswoode remarked, that the Society should consider whether 'it is desirable, in the interests of science, that the Fund should be maintained; and if so, whether in its present or any other form?'

Dr Schwendler, whose name is associated with electrical and other physical researches made in India, in prosecuting an inquiry ordered by the Indian government as to the feasibility of applying the electric light in railway stations, found himself at fault in his experiments, owing to the want of a trustworthy standard of comparison. The so-called 'standard candle,' by which all photometric results are measured, is not constant, and the consequences may be imagined. As Dr Schwendler remarks: 'The inconstancy of a standard acts perniciously in two directions: it prevents us from being able to execute accurate measurements even with the most accurate and sensitive test methods; and further leaves us in that deplorable condition of not being able to improve the test method, although we may be convinced that the method of testing requires improvement.' Accepting this argument as well founded, it is clear that investigations in photometry are carried on at a disadvantage.

Many years ago a suggestion was made that the best material for a standard of light would be platinum. Dr Schwendler, as he tells us, thought it best to leave the old track, and produce the standard by the heating effect a constant electrical current has, in passing through a conductor of given mass and dimensions. Platinum does not change in contact with oxygen, and is therefore the best metal that could be chosen for the conductor. Let the current by which it is ignited be constant, and the light will be constant whether moderate or intense. In this, therefore, the much-desired object appears to be achieved. Certain precautions to be observed during experiments are explained by Dr Schwendler in the *Journal of the Asiatic Society of Bengal*, No. 227, accompanied by a zincograph illustration of the several forms and parts of the proposed new standard.

The process, discovered by Messrs Thomas and Gilchrist, by which steel can be made direct from common pig-iron, such as is manufactured in Cleveland, is undergoing trial in foreign countries with, so far, satisfactory results. As many readers know, the prime difficulty in the manufacture of steel has been to get rid of all the phosphorus from the iron. The two investigators above named succeeded in producing a peculiar kind of brick for the lining of the 'converter,' and thereby cleared the way for demonstrative experiments. The effect has been well and briefly described by Professor Emerson Reynolds. By means of the new bricks, which are very refractory, 'a basic condition of the slag, hitherto unattainable, has been secured, without excessive waste of or injury to the lining and metal. The result is that oxygen has been found not to be so inert as regards phosphorus at the intense temperature which accompanies the Bessemer process, as had previously been supposed; but that in fact, under the conditions afforded by this new method of lining, oxygenation of the phosphorus does take place, and the phosphoric oxides combining with the

form phosphates in the slag, thus rendering it possible to draw off the steel with but an unimportant trace of phosphorus remaining.

The bricks are made of an aluminous magnesian limestone, and are burned in a furnace lined with ordinary firebrick. A curious fact came to light after one of the burnings. The intense heat had melted the floor; some layers of the pile of bricks sank through, and were fused into a common mass, which shaped itself on cooling into crystals, the substance of which, as stated by Professor Reynolds, is a bisilicate and a true pyroxene. And thus has been effected, accidentally, and under novel conditions, the synthesis of an interesting member of a most important group of minerals of natural occurrence.

On some of the railways in the United States a locomotive indicator is run from time to time, in order to ascertain the condition of the line. In a compartment of this locomotive, ingeniously contrived wheel-work and a travelling band of paper are fitted. The onward motion of the locomotive moves the wheels, and these make a mark on the band of paper for every fault on the line; and thus the condition of the permanent way is clearly made known. As we are informed, 'an ill-laid or started rail infallibly makes its mark on the chart, and as the instrument dots every mile, the whereabouts of any fault is readily indicated.' To read of a busy engine thus doing the work of a surveyor, is animating and increases our admiration for the powers of machinery.

A remarkable machine described at a recent meeting of the Société d'Encouragement pour l'Industrie Nationale, at Paris, may fitly be mentioned in association with the foregoing. It is called Profilograph, because when in use it traces mechanically on paper the outlines of the ground over which it travels. It is a small carriage mounted on two wheels, drawn by one man, and attended by another, who marks the levels at the proper places; and underneath hangs an iron rod with a large ball at its lower end, serving as a pendulum. This pendulum maintains a constant vertical position, while the machine inclines in one direction or the other according as it ascends or descends a slope. To the upper end of the rod is fitted a pencil, which marks on a sheet of paper the ups and downs of the country traversed, whether on an ordinary road or across trackless fields. The exact profile is thus recorded to a given scale. At the same time one of the wheels, acting the part of chain-bearer, measures and indicates the distances travelled throughout the survey. For surveyors and others engaged in levelling operations, this machine would appear to be eminently serviceable, and there is talk of its being made use of in a new general survey of France contemplated by the government.

Another invention that seems likely to be of service in navigation is signalling by means of illuminated steam. That the steam of a locomotive shines brightly at night when the furnace-door is opened, is now a familiar fact; and if a properly prepared light is thrown on the steam rushing from the funnel of a steamer, the illumination is so vivid that it can be seen at long distances. The possibility once established, the arranging of a series of flashes, or of different colours, to produce a series of signals, becomes comparatively easy. Experiments made under

the authority of the Trinity Board have been reported as effective and satisfactory; and it appears that the method is applicable to sailing-ships, for the brilliant light can be thrown upon the sails, and seen from afar. Here then is an additional appliance towards the prevention of collisions at sea, with the advantage that in a mass of light there would be less liability to error than with isolated lamps, as at present. Another element of safety is worth mentioning—namely, that the French government have agreed to adopt the English rule of the road at sea; to commence in September 1880.

A self-acting whistling buoy, designed to lessen the dangers of navigation, is to be tried on the Goodwin Sands. The interior contains tubes which take in and force out air by the movement of the buoy. The whistle sounds loudly as the air escapes, and thus gives warning to all vessels within hearing.

By a process known to chemists as dialysis, fluid mixtures can be separated one from the other with but little trouble. The apparatus by which the process is effected is called a dialyser; and something like it has been introduced into the navy, so that the liquor in which salt beef or pork has been boiled may be separated from the salt, and thereby made palatable as an article of diet. Soup that has been over-salted may be treated in a similar way; and if this can be done on board ship, it may be tried with similar advantage in public institutions and dwelling-houses on shore.

If published statements may be trusted, there will henceforth be no difficulty in keeping fresh butter for weeks or months. The butter is treated with a preservative or antiseptic substance, for which a patent has been taken out; besides which, a small quantity of salt, not more than one pound in a hundred, is used. It seems incredible that we are to have fresh butter in all seasons and in all climates, yet such is the promise of an experiment recently made by the Aylesbury Dairy Company.

Dr Jamieson has contributed to the *Transactions of the Royal Society of Victoria* an interesting paper on 'A New Point of Resemblance in the Respiration of Plants and Animals.' In each case oxygen is inhaled and carbonic acid exhaled: the process is always going on, and is as essential to the life of the plant as of the animal. While in the animal the blood is passing through the lungs, oxygen enters into loose combination with the red colouring-matter—the hæmoglobin. So, according to Dr Jamieson, oxygen is in a form of loose combination in plants and vegetable substances, as in the blood, and is therefore capable of being slowly given off in a very active form to combine definitely with oxidisable substances. And further, plants contain a substance other than chlorophyll, having some important points of analogy with the hæmoglobin of animals, acting like it as an ozone transferer.

Captain Toynbee, of the Meteorological Office, has made a comparison between the temperature of the North Atlantic and of Great Britain in December 1877 and 1878, from which it appears that the portion of the ocean traversed by the Cunard steamers was three degrees warmer in December 1878 than in December of 1877. This fact was used as a test for the notion that the temperature of our winters depends on that of the

sea to the westward. The observations made on the land were examined, and they shewed that December 1878 was eight degrees colder than December 1877, notwithstanding that the sea was three degrees warmer. This result indicates that the cause of our varying temperature must be sought elsewhere. Captain Toynbee suggests that 'the difference of our seasons depends upon the tracks of the areas of low pressure which cross Great Britain. If they pass over the northern parts of these islands,' he says, 'they give rise to southerly and south-westerly winds, with warm weather; while if they pass to the southward, they bring easterly and north-easterly winds. . . No one can watch the Daily Weather Charts issued by the Meteorological Office without seeing that our winters are also very much affected by the formation of areas of high pressure to the northward and north-eastward of these islands, checking as they do the easterly movement of areas of low pressure which appear on our west coasts, and causing a continuance of northerly winds. This disposition of pressure was common during the winter of 1878-79.'

In his Report for the quarter ending September 30th last, the Registrar-general tells us that the death-rate for that quarter was exceedingly low—16·4 per thousand; lower than in any quarter since 1837, when civil registration was first instituted. The births in the same three months amounted to 252,520, and the deaths to 139,271. Within fifty-three days of the quarter, there fell 11·7 inches of rain; four inches more than the average of the corresponding period during sixty-one years. The temperature also was below the average; nevertheless, we see in the foregoing statements that a wet chilly summer is less fatal to health than a hot one. The Registrar estimates the numbers of the population of the United Kingdom at 34,156,113. of these, 3,627,453 are allotted to Scotland, and 5,363,324 to Ireland. These numbers are liable to modification by emigration, which shews a marked increase over the years immediately preceding. The consuming power of such a population is surprising. Taking the one article of bread, the quantity of wheat required to furnish a sufficient supply in the year ending September 1879 was more than twenty-six million quarters.

Announcement has been made that an English version of the North-east Exploring Expedition, conducted by Professor Nordenskjöld, is to be published. The history of the endeavours to find a north-west passage is pretty well known; but a voyage in the reverse direction and all along the northern coast of Asia, will be something new. The enterprising explorers on board the *Vega* have accomplished a work which, begun four hundred years ago, opposed such formidable difficulties, that in time it came to be regarded as impossible. But now we are to have information about the great Siberian rivers that pour their waters into the Arctic Ocean—about strange lands and strange peoples—about the zoology, botany, geology, and meteorology of hitherto unknown regions; and about forests of sea-weeds—if weeds they are—which in deep water grow to a height of one hundred feet. Professor Nordenskjöld intimates that he has something important to say about the aurora; and on the question as to whether the continents of Asia and America were once con-

nected, or are now, so to speak, growing towards each other; and on the question of open water seen far in the north-west during the whole winter. Was this the 'wide immeasurable ocean' which Wrangell saw in 1823 when he travelled northwards from the mouth of the Kolyma one hundred and five wersts across the ice? The steamer—the home of the gallant party—was frozen in September 1879 off the Tchuktchi Peninsula, and was there held fast until July of the present year. She then sailed through Behring's Strait into the North Pacific and to Yokohama, where the Japanese, by hospitable demonstrations, shewed their appreciation of the successful endeavour. Even though the north-east passage may turn out to be of no commercial value, the fact remains that trading voyages may be made to the mouths of the principal rivers; and it appears that Professor Nordenskjöld is making arrangements for another exploration in the coming year.

ECCENTRICITIES.

FROM time to time we offer to our readers certain oddities of human life and character. Subjoined are several taken at random.

Mr J. Underwood, who died in 1733, left six thousand pounds to his sister on condition of being buried in the following manner. At the grave-side, six gentlemen, who were appointed to follow him, sung the last stanza of the twentieth Ode of the second Book of Horace. No bell was tolled nor black worn; no one was invited but these six gentlemen; and no relation followed the corpse. The coffin was painted green, and the deceased was buried with his clothes on. With him were buried three copies of Horace, Bentley's Milton, and a Greek Testament. After supper, they sang the thirty-first Ode of the first Book of Horace—all being in strict accordance with the will.

The French historian Mezeray used to study and write by candle-light even at noonday in the summer; and always waited upon his company at the door with a candle in his hand. It was a constant practice with him when candidates offered themselves for vacant places in the Academy, to throw in a black ball instead of a white one, 'to leave to posterity a monument of the freedom of elections in the Academy.'

The parish clerk of St Clement Danes, in the early part of the last century, gave a curious instance of admonition and thanks. He lent a man fifty shillings, which was unpaid for several years. He could never find the borrower at home, though he confronted him every Sunday in the middle aisle at church. One Sunday, the clerk looking the debtor full in the face, repeated the lines, 'The wicked borroweth, and payeth not again.' This admonition had the desired effect, for the next day the man called and paid him the money.

A maiden lady who died in 1786 left the following singular legacies in her will: '*Item*.—I leave to my dear entertaining Jacko [a monkey], ten pounds per annum during his natural life. *Item*.—To Shock and Tib [a lapdog and cat] five pounds each for their annual subsistence during life; but should it happen that Shock die before Tib, or Tib before Shock, then, and in that case, the survivor to have the whole.'

In a review held at Weymouth many years ago, General Dundas's horse fell with him. An officer in attendance immediately dismounted to assist the General, and was much concerned to learn that his leg was broken.

'I will try to get your boot off,' said the officer.

'Do man, do,' replied the General.

A knife was instantly produced.

'What are you about?' exclaimed the General.

'I am going to cut your boot off.'

'You shan't do any such thing. No sir; I bought them just before I came to the camp, and I gave six-and-thirty shillings for them. Pull it off sir; pull it off.'

It was represented to the wounded General that it was impossible under his present sufferings; but nothing would do; 'the boot should not be cut to pieces in that manner.'

At that moment George III. arrived at the spot, anxiously inquiring what had happened. 'What! what! not cut off the boot? Pooh, pooh; stuff!' said the king. 'Cut it off—cut it off.'

'No,' replied the General. 'They are new boots, your Majesty; and I command him at his peril not to cut the boot. He can pull it off.'

The attempt then made to draw off the boot was at length accomplished, though the agony of the sufferer was painfully manifest by the perspiration dropping from his forehead.

The celebrated Lessing having missed money at different times without being able to discover who took it, determined to put the honesty of his servant to a trial, and left a handful of gold on the table. 'Of course you counted it?' said one of his friends. 'Counted it?' said Lessing, rather embarrassed. 'No; I forgot that.'

Philip Fitzgibbon was supposed to possess a more accurate and extensive knowledge of the Irish language than any person living; and his latter years were industriously employed in compiling an English and Irish Dictionary, of four hundred quarto pages, which he left completed with the exception of the letter S, and that he appeared to have totally forgotten!

About 1770, there was living in London a tradesman who had disposed of eleven daughters in marriage, with each of whom he gave their weight in halfpence as a fortune. The young ladies must have been bulky, for the lightest of them weighed fifty pounds two shillings and eightpence!

The great Duke of Marlborough some years before his death retired occasionally to Bath, and often amused himself with cards, though he seldom ventured to play high. One night he was engaged at piquet with Dean Jones, from whom he won sixpence, and exacted the payment. The Dean declared he had no silver, but borrowed the money, as the Duke said he wanted it to pay for his sedan-chair. The Dean, knowing the Duke's avarice, watched him, and saw him actually walking home, in order to save the sixpence. Pope speaks of him as one who would 'Now save a kingdom, and now save a groat.'

UPON THE THRESHOLD.

Once more we stand with half-reluctant feet
Upon the threshold of another year;
That line where Past and Future seem to meet
In stronger contrast than they do elsewhere.

Look back a moment—Does the prospect please,
Or does the weary heart but sigh regret?
Can Recollection smile, or, ill at ease
With what is past, wish only to forget?

Say—canst thou smile when Memory's lingering gaze
Once more recalls the dying year to sight?
Wouldst thou live o'er again those changing days,
Or bid them fade for ever into night?

A solemn question—and the faltering heart
Scarcely dares say 'Yes,' yet will not quite say 'No;'
For Joy and Sadness both have played their part
In making up the tale of 'long ago.'

Here Memory sees the golden sunlight gleam
Across the path of life and shine awhile;
And now the picture changes like a dream,
And sorrow dims the eyes and kills the smile.

So—it has gone—where all has gone before;
The moaning wind has sung the dead year's dirge;
Time's waves roll on against the crumbling shore,
And sinks the worn-out bark beneath the surge.

Here ends the chequered page of prose and verse—
Or shapely words and lines writ all away
There they must stand for better or for worse;
So shut the book, and bid the year good bye!

G. F.

Volume XVI. of the Fourth Series of CHAMBERS'S JOURNAL is now completed, price Nine Shillings.

A Title-page and Index, price One Penny, have been prepared, and may be ordered through any bookseller.

An elegant cloth case for binding the whole of the numbers for 1879 is also ready.

Back numbers to complete sets may at all times be had.

Next Saturday, January 3, 1880, will be commenced in this JOURNAL an original Tale of sustained interest, entitled

A LIFE'S ATONEMENT,

By D. CHRISTIE MURRAY,

Author of *The Silver Lever*, &c.

The Conductors of CHAMBERS'S JOURNAL have further to announce a series of interesting Anecdotes, entitled

REMINISCENCES OF AN EQUESTRIAN MANAGER,

By CHARLES W. MONTAGUE.

END OF SIXTEENTH VOLUME

Printed and Published by W. and R. Chambers,
47 Paternoster Row, London, and 339 High Street, Edinburgh.
